PAGE

calling his attention to the resemblance between his statue and the small bronze in the British Museum. M. Chapu searched his note-books, found the sketch he had made, and forwarded it along with a drawing of his own statue. The resemblance extends only to the posture of the two figures, and the most that can be said is, that the sight of our small bronze may have helped the sculptor unconsciously to select, from among other conceptions then floating in his mind, the one which he finally worked out. The moral of the story seems to be that the most insignificant of our statuettes may, on a propitious occasion, render a true service to an artist. And the reason no doubt is this, that many of them reproduce the conceptions of men more gifted than the actual makers of the statuettes.

At present we know almost nothing of who the men were who made our bronze statuettes, whether they had been attached to the workshops of sculptors, or whether they were a class by themselves, standing in much the same relation to the sculptors as the painters of Greek vases stood to the great painters of their day Most probably they were a class of minor artists created by the constant demand for statuettes to be dedicated in the temples. The excavations on the Acropolis of Athens and at Olympia have shown how vast must have been the number of the statuettes deposited by devotees in these places.

On the other hand, it does not follow that the whole of our bronze statuettes had been made by this special class of craftsmen. We are told of one sculptor whose small models fetched extravagant prices, and we can believe that even greater men than he had occasionally produced statuettes finished with every accuracy of detail, and had allowed them to be cast in bronze. There may have been some enquette lumiting the production of such figures. That we do not know, but certainly not a few of our statuettes are of such excellence that we can hardly believe them to be the work of minor craftsmen, notwithstanding the extraordinary skill we see occasionally displayed by those other craftsmen, the vase painters

We have almost no direct information as to how far bronze statuettes had been employed by the Greeks for the adornment of their dwelling-houses. We know that Alexander the Great carried about on his campaigns a small bronze Heracles, the work of his favourite sculptor Lysippos. In Roman times Sulla carried in his bosom when in battle a

small figure of Apollo, and much the same is told of Nero and of Hadrian. We may fairly conjecture that the desire to be surrounded in their homes by beautiful bronzes had been customary among the wellto-do people of antiquity. Pompen and Herculaneum were essentially

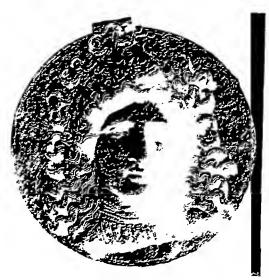

Fig z -Bronze Mirror case

Greek work, about 400 BC British Museum

Greek towns. Possibly enough the luxury of private life may have been greater there than in the older cities of Greece proper. But even making a liberal allowance of that kind, we should still be struck by the number of beautiful bronzes in the museum of Naples, collected from the ruins of private houses at Pompeii and Herculaneum. In many instances these

bronzes were attached to pieces of furniture, or were kept in show-cases, as nowadays. Larger specimens stood on pillars. These bronzes are exclusively of Greek workmanship, and we may fairly suppose that in Greece itself there had prevailed a more or less similar degree of household taste. At present we have at all events this testimony, that in Greek tombs of the best age there are frequently discovered bronze mirror-supported on statuettes of great beauty, as also circular mirror-cises grandly enriched with rehefs, as in Fig. 2, with its splendid steadfast face set in the midst of wavering curls. It cannot be supposed that these objects had not previously served for daily use or household adornment

When we find large numbers of statuettes presented to the temples of the gods we are almost bound to conclude that these objects had been precious in the eyes of the donors Many of them no doubt were images of a favourite deity, as of Athene on the Acropolis of Athens We can understand these having been purchased and taken direct to the temple without in any way being associated with the home life of the devotee But there remains a vast number of bronzes found on the Acropolis and at Olympia which do not come into this category. It may be that the donors of these had usually no feeling beyond that of making a gift to the god Still one would like to think that a large proportion of the bronzes found on the sites of temples had at one time been valued in the daily life of the people To surrender what was most prized for the sake of future happiness was an idea familiar to the Greeks The reader will remember the incident of Polycrates He had been told to throw into the sea what he valued highest, and chose a ring from his finger But apparently he had not been sufficiently sincere in his choice, because the ring was found subsequently inside a fish and brought back to him

It is interesting and almost necessary to compare for a moment the bronze with the terra cotta statuettes which also exist in great numbers in our museums. One would suppose that the terra-cottas must have similarly served the purpose of household adornment before being committed to the tombs, and that the same models which had been made for the bronzes would have been utilised again for the cheaper production of terra cottas. As a matter of fact the later terra-cottas, from Tanagra and elsewhere have little in common with the bronzes

They reproduce only a limited number of types, such as that of a beautifully dressed woman. They ring the changes on this type indefinitely. It would almost seem as if they had been made for the women's quarters in Greek houses At all events, in singular contrast to this limitation of the terra cottas is the boundless variety of subject in the contemporary bronzes It is only when we go back to older periods that we find a closer alliance between the bronzes and terra-cottas not only in the subjects they represent but even more remarkably in the style of workmanship So much is this the case that one is tempted to believe that in the older times the same class of craftsmen who made the bronzes made also the terra-cottas
It was a simple matter to make a clay mould from a bronze statuette and then to take a cast from it in terra-cotta. The only difficulty was this, that the bronze original being in most cases highly finished down to the minutest detail, it was necessary to employ the finest possible clay in making the mould and the cast A consequence was that this extremely fine clay became easily cracked under the process of firing That is obvious in a number of specimens in the British Museum It was natural that the bronze-workers who in the first instance had modelled their figures in clay, would combine with their more proper occupation the production of copies in a cheaper material

The only exact information we possess as to the composition of ancient bronzes is derived from the analyses that have been made in modern times. No doubt Pliny gives certain statements (xxxiv 6, 9), but they are useless when he mentions details, and only amusing where he reports that the alloy which made the Corinthian bronze so famous had been discovered at the sack of Corinth by the Romans under Minmmus, when vessels of gold, silver, and bronze melted together in the conflagration and produced 1 golden bronze. That was in 146 B C, whereas the charms of the gold-like Corinthian bronze had been known long before. Nevertheless, the story, though of late origin, may have been based on a tradition 18 to the use of gold as an alloy of bronze, because from several specimens of ancient bronzes that have been analysed it has been seen that gold and silver were retually employed. An archaic fibula yielded 7 per cent of gold, over 20 per cent of silver, and 73 per cent of copper. Another behef was that the Corinthian

bronze derived its beauty from being cooled in the water of the fountain of Peirene

Having given this brief introductory sketch, I may now state that my purpose in this monograph is to select only such of our statuettes as may reasonably be brought into connection with certain epochs of ancient sculpture, not altogether for the sake of the bronzes themselves, but in a greater measure because of the opportunities they afford of associating them with sculptors of renown, and of tracing the influence of Greek sculpture outside of Greece itself, as among the Etruscans or among the peoples of Gaul and Britain In the history of Greek art much is already known of its main epochs, yet hardly a year passes without something being brought to light from Greek soil which shows how much there is still to be done in the way of a more minute analysis of artistic motives and style in the sculptures with which we have been long acquainted. In this and the next chapter I propose to consider a certain number of bronzes of the archaic period, not because of any particular artistic importance in themselves from a modern point of view. but because they help to show how the artistic mind of those early times was working its way towards a new solution of the problem of what sculpture should be It was a critical moment for the Greeks Their poets had already shown how the Greek language could be modulated into new forms of song, undreamt of by the older nations of antiquity, and never since surpassed. The sculptors had to take up the same parable, and if less successful in many instances than the poets, we must remember that the methods and apphances of sculptors are not so easily changed as those of poets

We begin with a figure which has been longer and more widely known than any other, and the reason is this that up to now it is the best copy in existence of a particularly famous statue. We are told that Darius, King of Persia, when he sacked the town of Miletus in 494 BC, carried off from a neighbouring temple, long famous for its oracle, a bronze statue of Apollo, the work of a Greek sculptor, Canachos. After a lapse of nearly two centuries, when Persia had been forced to yield to the Macedonian conquest, the statue was returned to Miletus, and thereafter appears on the coinage of that town, where it is represented as an archaic streue of Apollo holding out a fawn in his right hand. Many instances are known

of statues which had become famous in one way or another, being copied on local coins; and when it was remembered that Pliny had described the Apollo of Canachos as holding out a deer in one hand, hardly a doubt

Fig 3 - Bronze Statuette Apollo of Miletus British Museum

could remain that the figure on the coins of Miletus was that same Apollo. But the workmanship of the coins is too rude to be of any artistic use. At this point the statuette comes to our aid. We see at once that it has been copied from the same original as the coin. And though much may be wanting in the spirit, as undoubtedly there is in the details, yet we may be thankful for being thus able to realise at least the pose, the proportions, and the general structure of the original

There is, however, one difficulty that ought to be mentioned here, though it is more curious than serious Pliny says (I quote the translation of Miss Jex Blake, xxxiv 75) "Kanachos made the nude Apollo which is named the Lover, and is in the temple at Didyma, of Æginetan bronze, and with it a stag so poised upon its feet that a thread can be drawn beneath them while the heel and toe alternately catch the ground, both parts working with a jointed mechanism in such a way that the impact suffices to make them spring backwards and forwards ' At first sight this description seems to answer to a different type of Apollo, either the one in which the god holds a deer by the fore feet while the hind feet touch the ground, or another in which he holds out on the palm of his hand a deer standing on its feet. In both these instances some such mechanism could have been employed as that described by Pliny, and it might perhaps further be argued that the maker of the statuette, finding it difficult or unsuitable to reproduce the deer standing on its feet, had modified it as we see in the bronze On the other hand, no such modification was necessary on the coins. It would there have been as easy to render the fawn standing on the palm of the god as lying on it, which is the case on the coins

So far as I remember, no one has succeeded in reconciling Phny's description with the deer lying on the palm as seen on the statuette and on the coins, and till that is done we must, I think, conclude that Pliny has mixed up two different statues of Apollo by Canachos. Now we know from another ancient writer (Pausanias, ix 10, 2) "that Canachos had made two separate statues of Apollo, that the difference between them consisted in this, that the one was of bronze while the other was of cedar-wood, that they were identical in size and appearance, and that any person who had seen the one would not require much knowledge to recognise the other as the work of Canachos." It seems odd that Pausanias, after insisting so expressly on the identity of the two statues in all but the material of which they were made, should have added the remark, "that any person who had seen the one would not require much

knowledge to recognise the other as the work of Canachos" circumstances it seems to me possible that these words may contain the admission of some difference of detail, the one statue having the deer lying on the palm of the hand, the other having the deer standing on its feet on the palm of the hand, or perhaps even holding it by the fore feet while the hind feet reached the ground

The cedar statue was to be seen in a temple close to Thebes, and was known as the Apollo Ismenios, from the river that flowed close by The bronze statue of Miletus was called the Apollo Philesios, an epithet which Miss Jex-Blake has translated "the Lover' as others had done before The translation may be right, but it is curious to find the one statue known by a strictly local designation, and the other, its duplicate, by so vague a title as "the Lover' One would rather expect to find under the epithet Philesios a corresponding local name

But what was the symbolism of holding out a deer on the hand? We often see the goddess Aphrodite holding out similarly a dove, Athene an owl, Zeus an eagle, Poseidon a dolphin or the head of a horse. In these instances the creatures held out in the hand are the symbols of the deities, just as the deer no doubt is the symbol of Apollo. It is the meaning of this action of holding out on the hand a symbolic animal that one would like to have explained Had the sculptor merely intended to indicate Apollo, as distinguished say from Hermes, a deer at his feet would have done equally well. I suppose the holding out of it in the hand implies a greater demonstrativeness, as much as to say, "That is my favourite animal, when you see it, respect it as you do me" With the same significance Athene and Zeus hold out with the right hand a Victory, the greatest of divine symbols

The bow which had been held in the left hand of our figure was also a symbol of Apollo Among other functions he was a god of the chase, to whose arrows many a stag may have fallen. We must be careful, however, not to imagine that the fawn in his right hand has been introduced by the sculptor to indicate the trophies of Apollo The creature is too small and insignificant for that Something different must have been intended. The tiny form would indicate the class of creatures which Apollo protected till such times as they were fit to look after themselves against the fur-reaching bow Yet even with this explanation,

one feels that there is something not altogether as could be wished in , the juxtaposition of the fawn and the deadly bow

Cicero, with an air of deprecation for those who, like himself, valued such minor things as works of art, says, "Who of us does not know that the statues of Canachos are too rigid to be true to nature?" The remark applies perfectly to our statuette, which is plainly too rigid to be true to nature Yet we may wish that Cicero had gone more into particulars, and left us a detailed criticism which we could have understood But his remark is at least the testimony of one of the greatest men in the world's history to the effect that Canachos, whatever his faults, was one of the sculptors of Greece whose works were worthy of study It was easy for Cicero as for us to point to the rigidity of such figures as the Apollo But we have to bear in mind that every age has its limitations, whether conscious of them or not, and that in the age of Canachos these limitations prescribed that a statue, even when meant to be in repose, could not be rendered except as strained throughout every limb Public taste would have revolted against anything else If one could imagine -what of course is an impossibility-a sculptor of those days producing a statue with all the freedom of movement of the Apollo Belvedere, I suppose it would have been received with shouts of derision, as befitting the work of an artist two centuries in advance of his time. The taste of the age abhorred everything that was not precise, more or less formal, and always gracious to look upon according to its own standard So much so, that one wonders how a great sculptor could express himself within such limitations, but that is because we exaggerate what seems to us artistic fetters and hindrances, forgetting that to those early sculptors, unconscious of such hindrances, every new step in advance must have appeared an inspiration of infinitely greater moment than we can now realise-looking back as we do, while they looked forward

From these considerations we turn again to the Museum statuette, remarking that if it be compared with others of about the same date it will be seen that it has a distinction of its own which alone would mark it off as a copy from a celebrated statue. The elaborate way in which the hair is arranged in two rows of curls over the brow is not what one would expect in a statuette. It will be observed that they project in a very prominent manner, so much so that if this projection

were proportionately increased in a life-sized statue the effect would be ridiculous. The inference seems to be that in the original statue this manner of wearing the hair had been a conspicuous feature which the copyist had determined to preserve at all eosts.

The shortness and slightness of the thighs in comparison with the lower part of the legs give the statuette a singularly ungainly appearance. We cannot charge so glaring a fault to Canachos, with all his rigidity of pose, but we can imagine a copyist of later date missing by just a little a system of proportions which he no longer understood.

To what date, then, are we to assign the bronze statuette? Was it copied from the statue before it was carried off to Persia by Darius, or was it made after the statue was restored to Miletus in the third century Be? I am inclined to the latter alternative not only for the reasons already given, but also because in the rendering of the bodily forms there is a remarkable softening down and rounding off where in true archaic work we see the forms of bones and muscles sharply and strongly defined The return of the statue in the third century was as we have seen, the occasion of introducing representations of it on the coins of Miletus, and we may reasonably conclude that the public rejoicing had led also to the production of statuattes of the famous Apollo, copied as exactly as was possible in a later age. It may be asked, "If all these allowances have to be made for the copyist, what remains of the original of Canachos?" There remains this, that however much the copyist may have varied from the original to its detriment, yet the bronze statuette stands out conspiciously among its contemporaries as a copy of a great statue, and that up to now it is the only thing we can turn to with any confidence when we read in ancient writers of the fame of Canachos

The statuette of Victory (Fig. 4) to which I next call attention is by itself an interesting example of archaie sculpture in the sixth century is a Though worked in the round, the figure is practically a relief. The wide-spreading wings with their close-lying pinions, the fine flat folds of the drapery, and the sideward movement of the goddess, have all been thought out on the archaic principles of relief such as prevailed in the sixth century. The swiftness of her movement is clearly and decisively expressed in the upper folds of the dress and in the long tresses of hair which are dashed backward in her speed, but still it is all in the manner of a relief, and that

is not surprising when we remember to what extent the energies of early Greek sculptors had been devoted to relief in bronze. What the object may be which she holds in the fingers of her right hand has not been explained. Nothing of the kind occurs in the Victories of subsequent art But we must be prepared to expect small difficulties of that sort when we recollect that at the time with which we are at present concerned, both art and poetry abounded in winged femile figures, which served to the Greek mind as personifications of many different powers, such as fate, strife, and so on , the one seldom distinguished from the other except by some slight emblem. In time these numerous personifications became consolidated, so to speak, in the figure of Nike or Victory, and we can hardly be far wrong, though as yet we cannot explain the object in the right hand, in identifying our bronze as a Nike

In the art of the great age it wis usual to give Victory a pose as if flying with her wings raised almost upright from the shoulders, and in many of these instances we see how magnificently the wings of a great bird may be combined with the human form. The splendid curve of the wings, just where it springs from the body of the bird, is, I suppose, unrivalled in nature as an indication of physical power. In that great age the wings of Nike had become accepted as facts, and sculptors were free to use them in accordance with their own knowledge or observation of the actual wings or flight of a great bird.

But in the archaic age of the sixth century is cithe wings of Victory were mainly accepted as mere auxiliaries to her speed. She might even have wings to her heels as well as to her shoulders. The one thing to attain was swiftness. Her movement is generally in a horizontal direction, and may be described as running with the imaginary help of wings. Apparently the artists had no intention of trying to reconcile the action of these figures with the natural movement of a bird beyond that of spreading the wings sidewards. Truth of that kind was of less importance to them than the beauty of the wings themselves, with their long sweeping lines enclosing narrow, flat surfaces which he contiguously, and appealed irresistibly in an early stage of art, when artists did not care for more truth to Nature than what was necessary for the moment

Another delight of those early sculptors was in the contrasts which they found, or established, between the more or less horizontal lines of the wings and the vertical lines of the drapery is seen in the bronze. The effect was one of balance and stability is against the rapid movement of the figure. There was the contrast also between the feathers of the wings rigid and flat by nature, and the folds of the dress where they are thrown into irregularity by the accident of movement. There was the contrist also of nude forms as against drapery and wings. I have pointed to these contrasts, not because it is necessary to emphasise the value.

Fig 4 -Archa e Bronze I ictory British Museum

and importance of them at all times, but specially because in the older arts of Egypt and Assyria nothing of the kind had been recognised to any extent, because the Greeks were the first to indicate the supreme importance of such things, and because in our statuette the separate values of wings, draperj, and nude forms have obviously been the subject of anxious consideration.

In archaic sculpture of the sixth century B c we have often occasion to notice the habit of lifting the skirt a little. It was the fashion then

for women to wear long dresses falling to the ground in many fine folds especially on public occasions when they went to attend ceremonies ir the temples Ordinary prudence would suggest lifting the skirt from the ground But we see this action frequently also in figures which are standing placedly It is almost always only a slight movement, just enough to throw the otherwise vertical and straight folds into becoming disorder Most probably the effect was fully appreciated by the women themselves It was certainly seized on eagerly by the artists of the time Even in our bronze statuette it is retained as we see by the action of the left hand, although this action was hardly necessary in her case when the agitated movement of the figure was of stself sufficient to furnish any amount of disorder in the folds of the dress But force of habit was strong. Force of habit was also answerable for the manner in which the drapery is made to descend to the pedestal in a large broad mass In a marble figure we can readily understand how that would have been necessary or advisable for strength and security. But in a bronze that hardly needed to be thought of, and cannot well be accounted for except from the influence of sculpture in marble. But apart from this we know, from a number of winged bronze figures found some years ago on the Acropolis of Athens, how firmly established in archaic art had been this custom of making the drapery descend to the pedestal in a broad mass The upper folds of drapery which, like her tresses, are being driven backward by the force of her movement are, of course, thinner and lighter than the heavy mass of the skirt, and therefore much more susceptible to movement That the artist has observed this very well must stand to his credit, considering how seldom observations of this kind occur in the art of his time

In Greek legend we read that the first sculptor Daidalos had fashioned a pair of wings for his son Icaros, who, having soared aloft gaily for a space, at last reached a point where the artificial wings gave way, whereupon he fell headlong into the sca If we may judge from ancient representations, the wings of Icaros are supposed to have been attached to his arms at the shoulders and wrists, much in the manner of the right arm and wing of our bronze, and in accordance with the general rule of figures of this class. The exceptions are few where the wings start in the front of the body as if springing from the chest bones, though it must be

allowed that the effect so produced conveys a much more obvious resemblance to a bird, and therefore a more appropriate application of wings to the human form than in the other case, where the wings spring from the shoulder-blades and appear like auxiliaries fitted to the arms.

Another curious exception is that of Hypnos, the god of sleep, of

Fig. 5 .- Marble Victory by Archermos. Athens.

whom there are several ancient representations in existence, in particular a beautiful bronze head in the British Museum, all alike going back to some famous original apparently of the time of Praxiteles if not actually by him (Plate II.). The wings start from the temples, and we know that in this instance the wings are those of a night-bird, such as an owl, which travels without noise or sound. We know further that Hypnos on one occasion was ordered to take the form of some such night-bird

formed by successive generations of one and the same family, of whom the best known were Mikkiades, Archermos, and the two sons of Archermos, Bupalos and Athenis, whose sculptures, it was suid, had brought more celebrity to Chios than all its vines. Among the places where their works were to be seen, outside of their native island, was Delos, where the marble Nike was found. Pliny was too much occupied with the romantic element in the lives of these sculptors to furnish a list of their works. But we learn from another ancient writer not only that Archermos did make a figure of Nike, but also that he was the first to give her wings.

The finding of another pedestal inscribed with the name of Archermos, on the Acropolis at Athens, does not necessarily prove anything more than that a statue by him had found its way to that most critical of cities, but it has suggested—the suggestion is now generally accepted—that those beautiful archaic marble statues of women still to be seen on the Acropolis were the work of his inimediate descendants. If that is ever shown to be true, it will then be possible to appreciate the extraordinary attraction which this new phase of sculpture in marble had created, and how much was due to the Chan school

and to pipe from a tree till he put to sleep Zeus, the fither of gods and men. But we have no explanation as to why the wings of Hypnos should start from his temples. When we see a pair of wings springing from the hair of Hermes, the messenger of the gods, we accept them as representing the winged cap or petrsus which he usually wore, and as indicating either the speed or the silence with which he travelled Hypnos had no occasion for speed. It was silence that was his gift, and silence after all is the best inducement to sleep. Among mankind it is, as has heen remarked, a general habit, in lying down to sleep, to rest the temples on the hollow of the hand. There is probably some good physiological reason for so universal a practice. But it is enough for our purpose that ancient artists had observed this habit. The next step would be to assign the temples as specially the seat of sleep and to attach to them the silently moving wings of a night-bird.

So far we have said nothing of what is perhaps the most interesting feature of our statuette of Victory, its relation to a marble statue found some years ago in the island of Delos, and now in the museum at Athens, along with its pedestal, on which is inscribed the name and genealogy of its sculptor, Archermos of Chuos (Fig 5) Had the Delos statue been found without its inscribed pedestal, we should probably have thought little more of it than of other archaic statues of the same general character, and certainly no one would have attempted to associate it with the famous name of Archermos, so little do we comprehend, as I have already said the importance which attached in early times to every new advance in art, however slight it may seem to us now We should have recognised that the Delos statue belonged to an age of transition from working in bronze to working in marble The rendering of the hair over the forehead in formal wavy lines would have told us of the surviving influence of bronze, while in the rest of the figure the simplicity of the forms and their structural character would have made it clear that a new era of sculpture had dawned with the introduction of marble

The inscription on the pedestal, stripped of its poetic form, says that the statue was the work of Archermos, son of Mikhades of the island of Chios. Its importance lies in its obvious connection with a passage of Pliny, where that writer gives with unusual detail and with much circumstance an account of the early school of sculptors in marble in Chios,

formed by successive generations of one and the same family, of whom the best known were Mikkiades, Archermos, and the two sons of Archermos, Bupalos and Athenis, whose sculptures, it was suid, had brought more celebrity to Chios than all its vines. Among the places where their works were to be seen, outside of their native island, was Delos, where the marble Nike was found. Pliny was too much occupied with the romantic element in the lives of these sculptors to furnish a list of their works. But we learn from another ancient writer not only that Archermos did make a figure of Nike, but also that he was the first to give her wings.

The finding of another pedestal inscribed with the name of Archermos, on the Acropolis at Athens, does not necessarily prove anything more than that a statue by him had found its way to that most critical of cities, but it has suggested—the suggestion is now generally accepted—that those heautiful archaic marble statues of women still to be seen on the Acropolis were the work of his immediate descendants. If that is ever shown to be true, it will then be possible to appreciate the extraordinary attraction which this new phase of sculpture in marble had created, and how much was due to the Chian school

II

Archaic Etruscan Statuettes

It is not many years ago yet since all archaic bronze statuettes were regarded as Etruscan Most of them that were to be seen in museums had been found in Etruria, or at all events in Italy, while as to the few which had unquestionably come from Greece, the answer might have been heard, that they must have been imported into Greece from Etruria An ancient authority told that the Etruscan sculptors' work (signa Tuscanica) had found its way everywhere. In Greek literature the references were many that testified to the admiration in which Etruscan metal work, such as candelabra, vases, and armour, were held by the Greeks ' There the question stood Nothing more was to be said till the time came for active exploration in Greece itself. One excavation after another brought to light numbers of archaic bronze statuettes, till at last it began to be asked whether, in fact, not a few of the archaic bronzes found in Etruria itself had not been imported there from Greece That was turning the tables with a vengeance. A lively division of opinion ensued either the Etruscans had no artistic originality, and were mere imitators of the Greeks, or they had distinct artistic gifts of their own, while subject to the influence of the contemporary Greeks In these circumstances, the first thing we have to do is, to learn to discriminate such

¹ Pliny, xxxii 34, "Signa Tuscanica per terrai dispersa quae in Etroria factitata non est dubium."

As regards candelabra are Athena os, xx yoo, ras rôw λλ γνεωύν η εργασια. Τλροργικη and compare 150d 1: 28°, where a Greek poet, assigning to various nationalities the particular thing for which each was most fámous, as, for instance, the Phoenicians for the invention of letters the Canans for their ships, and the Athenians for their pottery, awards to the Etruscans supermeary in all kinds of bronze work useful and ornamental in a hour potter.

away from the conventionalisms of older times and to seek gradually a new sphere in the rendering of an inner organic vitality. No one can say that Antenor was the first to strike out on this new path. Others of his contemporaries may equally have been searching in the same direction. That is quite possible. But we have to remember also that the task assigned him in making a group of the two Tyrannicides was one which could not but have stirred in him a deep and strong emotion. The children in the streets of Athens were then singing a rude ballad of how Harmodtos and Aristogeiton, concealing their daggers in branches of myrtle as they marched in public procession, found an opportunity of stabbing to the heart the man who had not only wronged them personally, but was an evil to the state. How deeply the people were moved by the event may be gathered from the song of the children, which has survived till now. In such circumstances, the sculptor, who accepted a public commission to celebrate that first great step towards freedom, would naturally

These statues are known from ancient copies, and as regards one of them we may very confidently say that no better comparison for it could be found than our bronze statuette. The type of head is different to some degree, and the action of the figure is not quite the same

Fig 7 .- Archare Greek Bronze British Museum.

Yet in both figures we have a striking similarity even in conception, still more in the rendering of the bodily forms. There can be no doubt for a moment that our bronze belongs to exactly the period at which Antenor made his famous group of the two Tyrannicides. It tells precisely the same story of the first efforts of Athenian sculptors to break

away from the conventionalisms of older times and to seek gradually a new sphere in the rendering of an inner organic vitality No one can say that Antenor was the first to strike out on this new path Others of his contemporaries may equally have been searching in the same direction That is quite possible But we have to remember also that the task assigned him in making a group of the two Tyrannicides was one which could not but have stirred in him a deep and strong emotion children in the streets of Athens were then singing a rude billad of how Harmodios and Aristogeiton, concealing their daggers in branches of myrtle as they marched in public procession, found in opportunity of stabbing to the heart the man who had not only wronged them personally, but was an evil to the state How deeply the people were moved by the event may be gathered from the song of the children, which has survived till now In such circumstances, the sculptor, who accepted a public commission to celebrate that first great step towards freedom, would naturally be in full sympathy with the popular movement, and likely to strain every fibre of his being towards infusing into his group something of the new life of freedom which had just dawned on Athens

In the last stage of archaic art, the conventionalisms and vigour, both of them very assertive in the first and second stages, give place to an idealising of the bodily forms which in the next generation was to lead to the school of Pheidias Simplicity and largeness of manner are diffused through the several principal divisions of the figure, but not through the figure as a whole That last touch was still wanting, as in Pygmalion's statue, before the goddess had breathed life into it. It is curious how the Greeks delighted to fable the breathing of life into statues Another instance was that of Pandora, a statue turned alive by the breath of Athene Again it was Athene, the goddess of handicraft and intelligence, who gave life to the figure of a man made by Prometheus And we perceive something of the same turn of thought when we read of statues by Daidalos having to be fastened lest they should run away These stories were the invention of a primitive legend making age somehow they impress us as if the art instincts of the Greeks had from the beginning observed that a statue, however accurate externally, must have part of the sculptor's own life within it

Let us now take three Etruscan statuettes of a corresponding date,

and more or less akin in subject. The first (Fig. 8), which is also the most archaic of them, represents a nude male figure carrying a calf on his shoulder. It is a type with which we are familiar in archaic Greek sculpture from a marble statue on the Acropolis of Athens. A more common variant shows us a ram instead of a calf. Sometimes the figure is expressly indicated as the god. Hermes, in which case we recognise him as Hermes Criophoros or ram-bearer, a character in which he is said to have once appeared mysteriously in the town of Tanagra at a

Fig. 8

Archaic Etruscan Statuette

Man carry ng a Caif

Brit ih Mu eum

time of pestilence, with the result that the plague ceased, to commemorate which happy issue the sculptor Calamis was employed to make a statue of the god as a Criophoros

There is no doubt, however, that the artistic type of a man carrying a calf or ram on his shoulders had been familiar long before in Greek sculpture, and there is equally, I think, no doubt that the Etruscan who made our statuette had derived his idea from the Greeks. But he had not derived more than the general idea. He has no sense of proportion such as the Greek of that time possessed. He exaggerates not only the size of the calf but the effect of its weight in pressing downwards the head of the figure. Neither of these things is to be seen in the contemporary Greek statue on the Acropolis of Athens. In the face of the bronze much attention is given to minute details, as if it were there

—in the face—principally that the key to the action was to be found Consistently with this view everything is eliminated from the bodily forms which was not absolutely necessary to convey the general impression

We may now take a more advanced specimen (Fig 9)—a figure of Heracles which was found in the Lake of Falterona in Etruria along with a number of highly interesting bronzes now in the Museum It will be seen that it is almost a direct challenge to the second of our Greek statuettes, each in its way being an exhibition of how robust the human figure may be But a moment's comparison will show that the robustness of the Etruscan

statuette has been attained to a large extent by the sacrifice of exactness and precision in the details of the bodily forms and by an extraordinary degree of exaggeration. The sculptor was not ignorant of the archuc rules and conventions of his time in regard to proportions and the defining of the separate parts of the human form. We can see that all

over the figure. But he could not resist the impulse towards forcible and exaggerated expression, such as is seen perhaps most plainly in the gigantic knot into which the lion's skin is fastened on the breast of Heracles, The body is thrust forward as if swelling with life. The head is turned violently to the side, the features much exaggerated. The whole figure is an instance of breaking away from traditional canons of art without being able as yet to substitute another but equally inflexible set of rules

A more agreeable effect is produced by our third figure (Fig. 10)—a young man holding in his hand a sword, the blade of which has been broken off. In his limbs and bodily forms there is a youth-

Fig. q .- Etruscan Heracles. British Museum.

ful sensitiveness which recalls the Greeks of the best days. But having got over this first impression, we cannot disguise the fact that his arms are in size out of all proportion, that the chlamys is fastened round his neck with a studied effect quite foreign to the Greek spirit, and that the face is animated to an exceptional extent. In the face, the hair, and the drapery, which last presents an agreeable contrast to the nude forms, there

is much to be admired over and above the general attractions of the bronze. Yet after all there remains something assentially Etruscun in the figure, and that something is exaggeration

We have not yet considered what in ordinity driped female figure looked like in the archaic age of Greece. Let us take as an example a bronze statuette in the British Museum which stands on its ancient pedestal and wants nothing but the right hand (Plate I). Most probably that hand had held a flower. There was much of exquisiteness among the Greek women of those days. Satisfied with their own heauty and the perfection of their dress, they liked to dally with a flower in the hand as if a flower were obviously the one thing best suited for them. Our statuette ranges admirably with the series of archaic marble statues on the Aeropolis of Athens—the same dress with its multitude of fine folds relieved by richly ornamented borders, and above all the same modest satisfaction as regards dress and demeanour. If our bronze differs from them, the difference lies chiefly in its more advanced type of face. The expression of self-consciousness in the marble statues has given way to a larger and more ideal conception in the bronze.

Our next step is to find an Etruscan statuette of about the same period, and presenting much the same opportunities for the treatment of drapery and for the general expression. In the example before us (Fig 11) it will be observed that the drapery, as in the Greek statuette, consists of two garments an under chiton which shows on the breast and right shoulder, as also at the feet, and an upper himation which envelops the figure, passing over the left shoulder. But the folds of this upper himation are indicated with much greater freedom and greater attention to natural effect than in the Greek bronze, which very probably is due to the influence of a somewhat later stage of art The massive fold which runs diagronally from the left shoulder across the body is quite different in form from anything in Greek sculpture For one thing it is much ruder, and for another the pattern of circles incised upon it appears on the outside of the fold at one part and on the inside at another Similarly, where the inner edge of the himation is turned outwards beside the right arm the same pattern again appears as if the himation had been enriched with an identical border both inside and out That is what the Greeks never did, and certainly

no Greek would ever have destroyed the massive diagonal fold across the body with an ornamental pattern, for the very simple reason that it is a large fold and not a border

Fig 10 -Archaic Etruscan Bronze British Museur

On the archaic marble statues of the Acropolis we frequently see a crown on the head richly decorated with painted floral patterns. It is a crown identical in shape with that of the Etruscan statuette, but instead of standing out conspicuously, not to say boastfully, as in the Etruscan

bronze, it is invariably kept down to the most modest and unobtrusive dimensions. That was not to the Etruscan taste. Their love of conspicuousness is seen also in the massive necklace of the bronze and particularly in the intensified features of the face. Yet we are bound to acknowledge that in this figure the workmanship is often excellent But for an innate habit of exaggeration, the sculptor might perhaps have stood side by side with the Greeks of his day.

The problem which we stated at the beginning, and have thus far endeavoured to illustrate by contemporary examples from Greece and from Etruria, is one that cannot be solved from the statuettes alone We must look farther afield We must allow, for instance, that there were some things that the Etruscans could do almost as well as the Greeks in the archaic age, one was the engraving of gems, and another the production of gold jewellery On the other hand, there were things where they failed badly, and there is one branch of the minor arts in which their failure is very easily demonstrated-the painting of vases Every one knows that most of the Greek vases in our museums have been found in Etruscan tombs They had been imported from Greece by wealthy Etruscans, and it is a testimony to the good taste of these Etruscans that they chose the very finest specimens they could get hold of Their own workmen were by no means ignorant of the technical processes in use in the making of vases Yet somehow their attempts to imitate the Greeks are melancholy failures That is surely a reproach to a people renowned for their skill in terra-cotta work. One speculates in vain as to the cause It is not enough to remember how the love of beautiful painted vases had distinguished the Greeks from the highly civilised nations of the East, and to assume that this same distinguishing quality was likely to hold good also as against the nations of the West such as the Etruscans, because we know how the Etruscans admired and coveted these products of Greek genius, and how direct and intimate were their relations with the Greeks There must have been some radical difference in the artistic instincts of the two peoples

One would suppose that the faculty of incising designs on bronze was practically the same as drawing with a fine brush on a terra-cotta vase. In each case success depends entirely on beauty of line. Is it not, therefore, strange that the Etruscans, who had shrunk from the attempt

at vase-painting, should have devoted themselves to an extraordinary extent to the production of incised drawings on bronze? The explanation may lie partly in this, that it is one thing to execute a drawing on a flat even surface, such as the bronze mirrors and cistæ of the Etruscans,

Fig. 11. - Archaic Etruscan Statuette. British Muncam.

and a much more difficult thing to accommodate a drawing to a surface which curves both verticully and horizontally, as is the case with many of the Greek vases. Very probably it was to escape this difficulty that the Etruscans abandoned the painting of vases and threw their energies into drawing on flat bronze surfaces instead, leaving us a vast series of such

drawings out of all comparison with the few specimens which have survived from the Greeks

We must remember that the Etruscans were never successful in working with the brush on a small scale. In archaic times they could paint very well on a large scale as the frescoes testify which still survive on the walls of their tombs. Then again it may be argued that having acquired, by means of their skill in bronze work, a success which had extended even to Greece, they would naturally not care to profit by the example of the Greek vases further than was suitable for their own special craft For example, on the Greek vases the finest drawing occurs on the circular kylikes, where the curving surfaces of the exterior present the greatest possible difficulties for the drughtsman. The best of the Greek vase-painters revelled in covering these surfaces with drawings of singular beauty Whether an Etruscan would have ever succeeded in translating drawing of that kind to a bronze vase of the same shape is a question we need not discuss. On the other hand, these Greek kylikes have in the interior a circular space which contains a drawing of one or more figures This was exactly what the Etrusean required for his circular bronze mirrors, and it is here that a comparison ought to be made between him and the Greek vase punter, each on his own ground I do not say that the result would indicate a very extensive indebtedness of the Etruscans to the Greeks, but it would confirm the view just set forth that they had in their own way profited by the vase-painting of the Greeks

Here are two of their archaic mirrors with incised designs, the one (Fig. 12) is a youth, with widespread wings to his shoulders and wings to his shoes, moving with great strides, and cirrying a life in one hand. One might say, here is instance of pure Greek drawing, so finely conceived is this youthful figure, so essentially Greek his action of holding up a flower. His body outlined against the background of the spreading wings, and these wings elaborately delineated as a foil to the simple lines of the body, the face of a large full type—these are characteristics singularly Greek. Yet the drawing is Etruscan. For instance, one cannot imagine a Greek leaving out the lines which should have indicated the bones of the chest, and indeed almost the whole of the inner markings proper to a figure in this movement. Yet these lines have been purposely omitted for the sake

of a particular effect of contrast with the wings. Again, one cannot believe that a Greek would ever have reconciled himself to so specially decorative a treatment of the wings, whereas that is just one of those things that fit in with the tendency towards exaggeration which we saw in the Etruscan statuettes. The movement of the figure, the spreading of the wings, and the winged shoes would be suitable for the Greek hero Perseus, such as

Fig 12 -- Etruscan Mirror. British Museum

we see him on archaic Greek vases, and it is possible that so far the figure has been based on Perseus. But apart from the identification of the figure on the mirror, I think we have already seen enough to recognise in it a striking combination of the influence of Greek drawing and Etruscan individuality.

On the other mirror (Fig. 13), the central figure is again one of those much-winged beings of archaic art—Greek as well as Etruscan. The peculiarity in this instance is that the wings spring from her waist and not

from the shoulders, which is perhaps just as natural, and may be regarded as a variant on those archaic Greek figures where the wings spring from the chest. The wings on her shoes are much exaggerated in size. Equally exaggerated is the action of holding out the skirt with the right hand, and

Fig 13 -Archaic Etruscan Mirror British Museum

yet the series of long narrow folds formed thereby is quite attractive in its way. It is a curious action, that of the left hand raised over the shoulder to take hold of, or receive, something which the boy behind her appears, to hold up. It is curious, because of its representing an action still going on, in contrast to the completed action shown in the holding of the skirt, the position of the wings, and the general utilitude of the figure. I have

from the shoulders, which is perhaps just as natural, and may be regarded as a variant on those archaic Greek figures where the wings spring from the chest. The wings on her shoes are much exaggerated in size. Equally exaggerated is the action of holding out the skirt with the right hand, and

Fig 13 - Archaic Etruscan Mirror. British Museum.

yet the series of long narrow folds formed thereby is quite attractive in its way. It is a curious action, that of the left hand raised over the shoulder to take hold of, or receive, something which the boy behind her appears to hold up. It is curious, because of its representing an action still going on, in contrast to the completed action shown in the holding of the skirt, the position of the wings, and the general attitude of the figure. I have

spoken of a boy standing behind her It is, however, possible that this and the other figure in front are not boys, but men represented on a diminutive scale, as was usual, among the Greeks at least, when they wished to indicate mortals in presence of a deity. Of that there is an abundance of examples on the Greek reliefs, and this is the more likely to be the true interpretation because the raising of the arms of the two diminutive figures is peculiarly the action of adorantes or suppliants myrtle branch which one of them holds is also appropriate to a suppliant The central figure would then be a goddess and as such a being of commanding stature The conception is quite in accord with the religious feelings of the Greeks, and no doubt it was from them that the Etruscan artist got his inspiration Figures bearing a strong general resemblance both to the goddess and to the suppliants are to be found on contemporary Greek vases But on the vases there is always an entire absence of that element of exaggeration which we associate with the individuality of the Etruscans, and find in the nurror before us The Etruscans took a special pride in their shoes If they were nothing else they had always their shoes on, in contrast to the bare footedness which the Greeks loved suppliants wear the usual pointed shoes and nothing else. I suppose we may take it as a mere slip of the engraver that there is no sign of drapers on the body of the goddess We cannot suppose that her dress begins only at the waist, nor that the upper part of it had been omitted for the sake of some effect of contrast between nude and draped forms Or if that was the case, then the idea was certainly not borrowed from the Greeks

It is very exceptional to find a bronze mirror with a relief sculptured in the back, as in Fig. 1.4, instead of the usual incised design. Possibly the idea had been to combine on the mirror itself the relief which more properly belonged to the case. A Greek would hardly have thought of such a thing. Again, the subject in this instance is clearly derived from the well-known Greek conception of Peleus carrying off Thetis. But the Etruscan artist has changed Peleus into Heracles and inscribed the name of Heracles beside him. But apart from this heence, we must allow that he runs the archaic Greek sculptors very close in his treatment of bas-relief as suitable to a small bronze mirror, with its flatness of surfaces and rich flow of lines.

As early as the seventh century B c the Etruscans were celebrated for their work in terra-cotta. Even in Rome the old temples were full of such works by them, and when in the course of time the Romans lost taste for these simple archaic terra-cotta statues, they did not escape the rehuke of Cato, who told them that they might well be content with what had pleased their ancestors. On the outsides of the temples were cornices richly decorated with antefixæ modelled in terra-cotta, such as may be seen among the remains of an archaic Tuscan temple in the Museum. The pediments were surmounted by figures or groups, as was the temple of Jupiter on the Capitol with its chariot of four horses raised on the highest point. That was the famous terra-cotta quadriga which the Romans had captured at Veii at the close of their ten years siege.

In Greece there was in early times a similar centre of terra cotta sculpture in the town of Corinth The Corinthians were an enterprising as well as an artistic people along the Gulf of Corinth They planted a colony in Corfu, and they were concerned in the early settlements of Greeks as far west as Sicily and Magna Greecia It is easy to imagine that their intercourse had extended also to Etruria But there is no need to imagine this if we accept as a fact the ancient tradition that in the seventh century B c certain artist modellers in terra-cotta from Corinth had settled among the Etruscans, and had there introduced their art (Pliny, xxxv 152) There is no reason to doubt the authenticity of this tradition, or to assume that it had been invented by the Greeks as a sort of claim of superiority or precedence on their part over the Etruscans, because the story is not told primarily in connection with these artists | They only come in incidentally as having accompanied in his exile from Corinth Damaratos from whom descended Tarquin, the King of Rome Artists do not usually expatriate themselves among barbarians When they leave their home they look forward to some favourable opportunity of cultivating their art and prospering in it, and on that principle we may fairly suppose that these Corinthian workers in terra cotta had been aware before they started that in Etruria they would find their particular branch of art already being practised and received with favour

¹ Pliny, xxxv 15", 'Elabotatam hanc artem Italiae et maxime Etruriae 'Livy, xxxiv 4 4

Fig. 14 —Bronze Etruscar Mirror with relief Heracles carrying off a Wor in Archin.—Sixth Century BC. British Manuer

In relating this tradition of the Corinthian artists, Pliny adds that in the opinion of some the art of modelling had been practised long before that time in the island of Samos, which lies close to the western coast of Asia Minor At present there is every reason to accept this ancient belief is well founded Every year brings fresh evidence in its favour

We cannot any longer overlook a belief prevalent among the Etruscans themselves that their ancestors had originally come from Asia Minor. In support of thit belief we may adduce this strong bent of theirs towards sculpture in terra-cotta. But the most we can be quite confident about is that in early historical times. Corinth had stood in close relationship with Sanios and Asia Minor in the East and with Etruria in the West, that Corinth had learned much of the art of working in terra cotta from Asia. Minor, and had passed this knowledge on to the Etruscans. For the present it must remain only a possibility that the artistic instincts of the Etruscans had come to them from an original community of race with the Greeks of Asia. Minor, and that the aptress with which in later times they helped themselves to all they wanted from the art of Greece proper, was due also to that same community of origin. I think this is the view which will more and more assert itself in regard to the Etruscans as an artistic people.

Towards the end of the seventh century BC the history of Asia Minor is fascinating in the highest degree New forms of verse and song burst into being The arts of painting, sculpture, and architecture were never richer or more varied. How intense had been the artistic activity of these times may be gathered from the splendid poetic remains of Archilochus, Sappho, Alcacus, to take only the best names The discoveries of recent years are beginning to enable us to realise what we had only heard of in tradition, that the first great home of Greek painting had been in Asia Minor. In sculpture of the archaic period we are fortunitely rich, and in architecture we can already judge-for example, from the remains of the archaic temple at Ephesus-how beautifully varied and luxuriant had been the details of the old Ionic temples in their original home. How different those columns with their sculptured bases, their capitals varying as if no two ought to be strictly alike, their elaborately carved neckings, and in short the apparently interminable variety of details under a general similarity of aspect-how different all

this opulence of forms from the Ionic temples of Greece proper with their precision of details and their passionate search after an established rule as to what was the most beautiful. In vase-painting, where so much of the charm depended on refinements of drawing and so little comparatively on grandeur of conception or splendour of effect, it is remark able that in Asia Minor as yet hardly a trace of that art has been discovered. Compare with this the fact that most of the great painters from Polygnotos to Apelles were natives of Asia Minor, and largely practised their art there.

On comparing the oratory of the Athenians with that of Asia Minor, Quintilian, one of the most observant of Roman writers in matters of Art, contrasts the simplicity and politeness of the Athenians with the extravagance of the Asian orators, as he calls them. Some were of opinion, he says, that the inflated redundant style of speaking common among these latter was due to the non-Greek element in the population

In their inscriptions the Etruscans employed the Greek alphabet, and apparently had never used any other They must have known much more of the Greek language than its alphabet, because in the very large series of bronze mirrors and engraved gems which they have left us, we constantly come upon scenes from Greek mythology which could hardly have been intelligible to them without a fair knowledge of Greek literature We cannot well suppose that they knew these myths solely from Greek works of art, say from the painted vases, because in that case one would expect them to merely copy what they saw But this is not the case. On the mirrors they constantly inscribe the names of the figures, and it is noticeable that these names, though written in Greek characters, do not present a pure Greek form. They more nearly resemble the Latin, as for instance, Menerfa, which is equal to Minerva, instead of Athene the Greek name of the goddess The Greek Bellerophon becomes Melerpanta, and so on in almost innumerable examples Surely this debasing of Greek names, if we may call it so, is itself proof that the Etruscans had been acquainted with Greek myths and legends long before these myths and legends had reached them under artistic forms One might be justified in going so far as to say that the absence of Etruscan writing, except in the inscriptions, which is so remarkable a phenomenon in a people renowned for their art and their civilisation generally, could be accounted for by assuming that the literature ordinarily current among them had been Greek.

I have only attempted to illustrate in a general way the differences between the Etruscans and the Greeks from an artistic point of view. But it will be found that the descendants of those old Etruscans displayed much the same artistic spirit when many centuries later they formed the famous Tuscan schools of painting and sculpture.

Ш

Statuettes of the Age of Polyclettos and Myron

THERE was a saying among the ancient Greeks that certain of their artists had represented men as they ought to be, others as they were, and some worse than they were The saying was applied to sculptors. painters, and poets alike It was not a mere passing observation which from its epigrammatic form had caught the public ear, for we find no less a writer than Aristotle employing it on several occasions But what concerns us for the moment is that the Roman writer Quintilian seems to have had this formula in his mind when speaking of the sculptor Polycleitos He says "Polycleitos surpassed the other sculptors in careful study and in gracefulness, but although in general he bears off the palm, yet it is thought that he had one defect, that of not being able to give gravity or importance to his figures. For just as he added grace and charm to the human form, so also in his figures of deities he seems to have failed in attaining the full measure of their grandeur. He is even said to have avoided figures of mature age and dignity, not daring to go beyond beardless youth It is said that Lysippos and Praxiteles approached most nearly to the truth of nature

From other ancient sources we know that one of the services of Polycleitos was that he had worked out for the use of sculptors a set of rules, which the Greeks called a canon for the construction of the human figure But a set of rules or system of proportions can only be of use to artists if it is based on a wide generalisation and on a multitude of observations and measurements of men as they are If that was the method employed by Polycleitos, we can understand how critics came to speak of him as having made men better than they were, or as having gone beyond the exact truth of nature

A characteristic of almost every one of his statues was, we read in an ancient writer, that it stood resting its weight on one leg, as in the Diadumenos for example (uno crure insistere) At first sight this does not seem any great innovation, because among bronze statuettes older

Fig. 13 - Marble Statue Diadumenos of Vasson Bretish Museum

Fig 16 - Marble Statue Diadumenos Farnese British Museum

than his time we occasionally find a close approach to this attitude. I think that the true significance of his innovation can only be fully realised when, taking as an illustration of it the Diadumenos, we observe how, by means of the raised arms, the whole figure is thrown into a momentary poise which at once arrests the attention

Of the Diadumenos, or youth binding round his hair a diadem won

in athletic games, several ancient copies exist in marble. But the one which is generally accepted as most true to the original of Polycleitos—which was of hronze—is a marble statue in the British Museum found at Vaison in France, and not pretending to be other than a copy made in Roman times (Fig. 15). Lately another marble statue has been obtained in excavations in Delos which, from its close resemblance to our Vaison figure, has gone some way in confirming the opinion that this type of a young athlete really represents the original Diadumenos.

But why should a youth who has just gained one of the greatest prizes of life, and had been cheered like Ladas on an English racecourse—why should he be of so sad a mien? Was it this expression of countenance which Pliny had in his mind when he described the Diadu menos as a gentle youth, in contrast to the Doryphoros as a manly boy? It may have been so

We have in the Museum another marble statue of a Diadumenos which differs from the rest in some important respects (Fig. 16). The action of raising both arms to fasten the diadem, the inclination of the head and the throwing of the weight of the body on the right leg are the same as in the others. But the type of face is quite different. The expression is that of pride or self-satisfaction, as became the winner of a great prize. The corners of the mouth, instead of being turned down as in melancholy, are turned up in joy. The left leg, instead of being thrown back like the others, as in a deferential attitude, is put forward proudly. Altogether, he answers to what we expect in a young athlete who has won one of the great prizes of life.

It is impossible to reconcile this statue with the others, both types cannot be traced to Polycleitos. And as the one just obscribed, the Farnese Diadumenos, as it is called, stands alone, while the other type, that of the Vaison statue, exists in a number of ancient replicas, it has been argued that the Vaison statue with its kindred, should be taken as representing the original of Polycleitos and the Farnese statue referred to some other sculptor. We know, for instance, that Pheidias had made a statue of a Diadumenos, but it is not pretended that his hand is discoverable in the Farnese figure, though we cannot altogether deny that under its very poor execution there may be a blundered survival of his statue. Nor does the Farnese figure answer in any way to what we know

of Praxiteles, who, on doubtful authority, is stated to have made a Diadumenos, or of Lysippos of whom it is known that he had taken the canon of Polycleitos as the basis of a new system of proportions.

The number of replicas of the Vaison type counts for much in favour of tracing it to a famous original. Meantime, I will call attention to the statue of an Amazon by Polycleitos. The story goes (Pliny, xxxiv. 53)

Fig 17 .- Marble Head of Arrazon. British Museum.

that in a competition among sculptors for a statue of an Anizon to be placed in the temple of Diana at Ephesus, it was arranged that the decision should be left to the competing artists on the principle that each was to select the statue next best to his own. The result was that Polycleitos came out first, Pheidias next, Cresilas third.

In some of the existing Amazon statues the expression of melancholy is explained by a wound visible in her side, but others, which have no wound,

are similarly sad of countenance (Fig 17) We are told that Cresilas, one of the competing sculptors, had made his Arnazon wounded, and possibly those of the statues which exhibit a wound should be assigned to him But, so far as Polycleitos is concerned, the question is, Was this pathetic expression to be explained apart from any sense of pain? The heads of the Diadumenos, especially one recently acquired by the Museum, seem to say yes. It will, I think, be allowed that the period of life between boy-hood and manhood has no more marked characteristic than seriousness and grave demeanour, and that the observation of this had not escaped artists of the time of Polycleitos may be seen in the frieze of the Parthenon with its lines of young horsenien serious of face, grave and respectful of bearing. It was this period of youth that Polycleitos chose as his special field of sculpture, and we should not, therefore, find it strange that the faces of his statues are usually charged with an expression approaching to sadness

The other type of "a manly boy," as represented in the Doryphoros, may be judged from the marble copies of that statue which have survived, especially the one in Naples The features and the shape of the head do not differ much from those of the statues we have just been considering, but the expression of the face is not in any particular degree sad The head is planted firmly on the neck instead of being bent bashfully to the side, and the glance is nearly straight forward. It will be allowed that these characteristics were rightly described by ancient writers as manly It seems to me probable that the ancient copyist, in reproducing the heads of Polycleitos, had been more faithful than in the bodily forms, just because of the peculiar expression by which they were recognisable But I do not feel the same confidence as to their fidelity in reproducing the bodily forms and proportions It is no doubt true that the measure ments of the Diadumenos and the Doryphoros, with their replicas, work out in a fairly satisfactory manner, whether we take the foot, the palm, or the digit as the unit of measurement, and, as Polycleitos is said by a not very authoritative writer to have employed the digit as his unit, this result has sometimes been cited as tending to prove that the proportions of these statues are true to his original, and embody his canon. It is unfortunate that the system of proportions handed down by Vitruvius, and worked out by Leonardo da Vinci, is stated to have been in use by

Fig 18 -Br nze Stateette Herres British Museum

Lysippos and other sculptors, as well as by Polycleitos, which, of course, would be a flat contradiction of the struement that Lysippos had fundamentally changed the canon of Polycleitos So far as I have seen, however, the Vitruvian system yields a type of figure which seems to correspond better with the sculptures of the frieze of the Parthenon—which were contemporary with Polycleitos—than with the Græco-Roman copies of the Doryphoros

I have endeavoured to make the discussion of the style of Polycleitos as brief as possible, in view of the fact that we have at best only a very limited number of bronze statuettes that can be associated with We begin with one which in its proportions and attitude obviously ranges with the copies of the Diadumenos and Doryphoros It is a figure of Hermes, found in France, and now in the British Museum (Fig. 18) Round its neck is a loose golden tore, which apparently had been added by a Gaulish owner. In the right hand is a purse, one of the symbols of Hermes as god of merchandise From the left shoulder hangs a chlamys, which, though it is modern, has been correctly restored from other specimens. It is not claimed that Polycleitos had ever made a statue of Hermes of this or any other type But it has been argued that this statuette is more or less true to his canon, and certainly if the marble statues we have been discussing reproduce that canon, there can be no hesitation in including our bronze in the same category There is the same short body and long legs of the Lysippos pattern, while the head, both in its pose and shape, has retained much of Polycleitos, as also the attitude of standing with the weight of the body resting on the right leg, and the left foot thrown back

Let us now notice a bronze statuette in the British Museum (Fig. 19), which seems to me nearer the ideal of Polycleitos than any of these figures we have been considering. The figure rests on the left leg instead of the right, while the right foot, thrown back a little, is planted with the sole full on the ground, not merely with the toes touching the ground as in the Diadument and the Doryphori. Correspondingly, the head is inclined towards the spectator's right. This bronze is no late copy like the last, but a true Greek work of the date to which we are assigning it, and in any case is one of the finest Greek bronzes we possess. I am endeavouring to give prominence to this figure, because among the vast number of statuettes

in our Museum it is almost unique in the closeness with which it approaches the youths of the Parthenon frieze in its proportions, in the inclination of the head and the rendering of bodily forms, and because I am

Fig. 19 - Greek Bronze.
British Museum

inclined to look rather to the Parthenon than to Græco-Roman copies for the truest analogies to Polycleitos

It is possible that among our bronzes there are some which may yet be traced back to the great sculptor Myron, the fellow-pupil of Polycleitos. For the present, however, we have to be content with the little we do know We are told that in his of him. statues he gave more attention than any one of his time to a truthful representation of external details, caring little for the expression of character. In his statues of athletes his first aim was a telling and effective composition, with greater variety of action than Polycleitos allowed himself, but apparently with less refinement. was Myron who first concentrated upon single statues the variety of movement which in older art was spread over many figures. His philosupply of life was to see the greatest possible display of action in one figure, and directed to one purpose.

We must remember that great as was the exactitude of Greek sculptors

in their observation of nature, they yet at times allowed themselves a freedom which strikes us as peculiar. For instance, they would on occasion give a lioness the mane of a lion, or a hind the antiers of a stag. Their principle was that to represent a thing which seems probable, though it may be impossible in fact, is a lesser error than to represent a thing which seems improbable, however true it may be to fact. That is a principle of art laid down by Aristotle, and one of his instances is that of the hind with stag's antlers, which seems likely enough but is not true.

Fig. 20 .- Bronze Marsyss. British Museum.

We are more fortunate in possessing a bronze figure of the Satyr Marsyas (Fig. 20), which, to some extent, may fairly be traced back to Myron. The style is doubtless much later. It cannot in fact be earlier than the

third or at most the fourth century B c There was therefore between our bronze and Myron an interval of two centuries or more, during which interval the representation of Satyrs in sculpture and every other form of Greek art was multitudinous Nevertheless it is more than probable that the artistic motive of our bronze was originally Myron's In the ancient list of his works mention is made of a group of the Satyr Marsyas and the goddess Athene Mursyas was there in the act of starting back in amazement when Athene threw to the ground the flutes on which she had been trying to play One or two uncient sketches of this group exist, and, though poor enough, they are sufficient to identify the attitude of Marsyas Precisely the same attitude occurs in a fine marble statue of Marsyas in the Lateran Museum at Rome, which is accepted as a copy from Myron, and here we have it again in a slightly modified form in our bronze It is an attitude which seems to me to be almost a challenge to Polycleitos and his Diadumenos, as much as to say, "If you wish the arms of a statue to be raised, raise them under some strong impulse like this, and not merely to fasten a diadem"

In our bronze the left hand is spread open with the fingers extended, as is usual in the expression of alarm. One would have expected the same in the right hand, but this is not the case. The right hand is merely thrown up to the head as if more in surprise than alarm The strongly marked treatment of the beard and hair must be taken as illustrative of a particular period of art In the sculptures of Pergamon, which belong to the second century B C, we find the same rendering of the hair in rough unkempt masses But we can trace much farther back the desire of Greek sculptors to obtain by means of a rough treatment of the hair an effective contrast to the smoothness of the face. We see it in the Hermes of Praxiteles I do not suggest that something of the same kind may be traced even farther back, to Myron himself Yet it is recorded of him by an ancient writer that with all his innovations in sculpture he had left the rendering of the hair just as it had been in "rude antiquity ' I do not believe that this expression of "rude antiquity" can apply to our bronze Still this expression of Pliny's requires some explanation

In the myth of Marsyas and Athene which Myron chose for his group the issue was of a milder description Marsyas suffered nothing more

IV

Statuettes of the Age of Pheidias

When we come to the great age of Greek sculpture, it is true that as regards Pheidias himself we are so far fortunate as to possess the sculptures of the Parthenon But incomparable as they are in illustrating the splendour of his genius in a series of compositions which have had no equal even in point of extent in the history of sculpture, there are times when one turns with longing and regret to the records of his isolated statues. We read and re-read the ancient descriptions of the chryselephantine statues of Zeus in the temple at Olympia and of Athene in the Parthenon.

We rejoice when, in digging foundations for a house in Athens or Patras, a marble copy of the Athene Parthenos comes to light (Fig 21) We rejoice, because, with all the nudeness and imperfections of these copies, they still preserve something of the general effect of the original

Among our bronze statuettes there is one that deserves attention from its relationship to the Athene Parthenos (Fig. 22). Let me first notice certain differences of detail. The pose of the figure has been changed from the right to the left foot. The left hand may have rested on the edge of a shield as in the Parthenos. We cannot be certain. The right arm has been raised, and undoubtedly the hand has rested on a spear held upright. That is a distinct divergence from the Parthenos, where, as we have seen, the right hand holds out a Victory. In the dress the only difference is that the agis is worn obliquely on the breast and not square across. But in the fragment which we possess of the Athene from the west pediment of the Parthenon, the agis is worn in the same oblique fashion. So that the idea was familiar to Pheidas, though he did not choose to employ it on his chryselephantine statue. The helmet

is correct in having three crests, and in showing the middle one supported on a sphinx. But the side crests have no Pegasi or gryphons connected with them.

In trying to account for these differences of detail we must not forget

Fig 21.-Marble Attent Parttenes Attens.

Atheni Parthenos. Bronze Statuette
British Museum

that they are each and all perfectly consistent with the time and manner of Pheidias. They are not to be classed with those capricious changes in the aspect of Athenè which occur in late Greek art. In my judgment the whole statuette is as true to the style of Pheidias as could be expected of so minute a figure

We are accustomed to think of Pheidias as a sculptor of colossal statues of gold and ivory, or of great compositions in marble brightened by colour and by accessories of metal We seldom associate him with sculpture in bronze, though, in point of fact, a bronze statue in the atmosphere of Greece would have been resplendent enough to range even with figures of gold

As regards his famous Athene Promachos on the Acropolis of Athens, we are told by an ancient writer, Pausanias (1 28, 2), that this statue had been erected as a monument of the victory over the Persians at Marathon, that the point of her spear and the crest of her helmet could be seen from ships approaching Athens from Cape Sumum, and that the reliefs on her shield, representing a battle between Centaurs and Lapiths, were a subsequent addition by a metal-chaser named Mys in the next century after Pheidias On ancient coins representing the Acropolis of Athens (B M Catalogue, Attica, pl 19, fig 7) we see a colossal statue of Athene standing on a spot where there is still visible on the rock of the Acropolis a cutting which had been made for the base of just such a From the coins, it appears that the figure had stood with one foot advanced and the right arm raised in the act of hurling a spear In this attitude the figure recalls the ancient and sacred image of Athene known as the Palladion, and probably the intention of Pheidias was to retain this familiar attitude while changing the artistic treatment of the whole figure in accordance with the spirit of his own age. The title of Athene Promachos, which had been associated with the archaic image, would naturally be used also of the new statue. One of our bronze statuettes (Fig 23) answers admirably to the conception of a Promachos or fighter in the vanguard This statuette comes from Athens, and seems to be plainly a production of the best period of art and undoubtedly derived from the statue by Pheidias, as it seems to me

Let us now examine the statuette more closely. The helmet has only one crest, there is no ornament except the sphinx which supports the crest, and a sphinx in that position was apparently inseparable from the helmet of Athene in the age of Pheidias, if, indeed, it was not invented by him. The Parthenos had three crests, but she was a stately show figure. The Promachos had to be warlike. As regards the ægis on her breast with the face of the Gorgon in the centre,

that is all in accordance with the age of Pheidias. It is only when we come to the drapery that we are struck with a peculiarity of treatment. The flat close-lying folds which are observed on the body and

down the left side of the figure exhibit a distinct element of archaism. at variance with the perfect freedom of the Parthenon sculptures or of the copies of the Athenè Parthenos. On the other hand. the girdle of serpents is quite free in its treatment, and equally so is the face of the goddess. question is how to reconcile this slight archaism with Pheidias. Before we say that this is impossible, there are several things to be taken into consideration. In the first place, we have as yet no authentic copy of any statue in bronze by him, and cannot say how he may have chosen to render his draperies while working in that material. But what is more to the point is that the bronze Promachos may have been a work of his early period when Greek sculpture was still in a measure under the influence of the archaic school in which he himself had been trained. The express statement of Pausanias (x. 10, 1) is, that the statue had been Fig 23.-Attent Promactor. erected to commemorate the battle

Greek Bronze British Museum.

of Marathon, which was fought in 490 B.c. At that date Pheidias could only have been a boy, and as regards the sculpture of the time, we know how archaic it then was from a series of marble rehefs at Delphi, which have survived from a building erected there by the Athenians to celebrate the glorious victory of Marathon, apparently soon after the event We have, somehow, to account for the considerable interval of time which must have elapsed between the battle of 490 BC and the erection of the colossal bronze statue on the Acropolis We know that ten years after the battle the Acropolis had been entirely destroyed by the Persians, so that what ever monument the Athenians may have set up there for their victory, if any, must have gone the way of all the rest in the general conflagration During these ten years Pheidias was approaching towards manhood, and it is quite conceivable that amid the new adornment of the Acropolis, which commenced when the Persians had been finally discomfited his rising genius had been recognised by his townsmen of Athens, and that the task had then been set him of producing the colossil Athene Promachos in bronze I am only suggesting what may well have happened It was a number of years after that when the sculptures of the Parthenon were entrusted to him. But some such suggestion is necessary if our bronze statuette is, as I think, a copy of the colossal Promachos As a young sculptor Pheidias may, like Raphael in his relations toward Perugino, have thrown into his work something of the archaic minner in which he had been trained Or, at all events, his early training still fresh in his mind, may have influenced him in retaining certain archaic elements which had been characteristic of the ancient type of Athene which his statue was intended to supersede. We cannot ignore the express statement of Pausanias that his statue had been erected to commemorate the battle of Marathon. The best we can do in the circumstances is to ascertain the earliest possible date thereafter at which it could have been erected on the Acropolis As we have seen, that date coincides with the early manhood of Pheidias

The most fumous in antiquity of all the works of Pheidias was his chryselephantine statue of Zeis at Olympia Unfortunately we have no copies of it, except on certain very rare coins of Elis, on one of which an attempt is made to give a view of the statue in profile (I ig 24), in another, the head alone, also in profile

It is not, perhaps, surprising that no other copies of the great statue exist. We must remember that though Olympia was a great show-place where sculptures by the greatest arists of Greece were to be seen in profusion, yet it was not an art centre. No sculptors were established

there, nor any of the minor artistic industries, such as the making of bronze statuettes. Sculptors came there to do only what had to be done on the spot. Bronze statues—and they were the most frequent—were brought ready to be set up. The only exception we hear of was the workshop which Pheidias had erected for the making of his chryselephantine statue, and it is to the honour of those who managed the

Fig. 24.—Coin of Elis, representing the Zeus of Pheidias. From an Enlarged Drawing.

town that this workshop was retained as a memorial of him for centuries. People went to Olympia to see the sights, to be present at the national games, to hear distinguished literary men read passages of their works, and perhaps to see Zeuxis, the successful painter, living up to his reputation. So that once every four years the little town was crowded. For the rest it was known chiefly to tourists or occasional worshippers. Certainly there was no school of art at Olympia in the whole course of its existence. Years ago the site was carefully excavated. Innumerable

bronze statuettes were found, but none of them had any relation to the celebrated sculptures of the place. They had all been brought hy devotees from other towns or districts

Let us now take the description of the statue as we know it from ancient literary sources in connection with the coin (Fig. 24), premising that on a small coin the size of a florin many details would necessarily be left out The attitude of the Zeus was that of a god seated on his throne as you see him in the coin Literally, his presence filled the temple It was said he could not stand up without carrying the roof with him The height of the temple was 68 feet to the top of the pediments, so that the figure itself may well have been nearly 40 feet. The face, hands, and wherever flesh appeared, were of ivory, the rest was of gold-the dress in particular, being richly enamelled with figures and flowers in various colours The beard and hair we suppose to have been of gold The ivory would be tinted to soften its whiteness, except perhaps in the eyes, where the natural whiteness of the material may have been taken advantage of The pupils were either of precious stones or of chony On the head was an olive wreath The right hand held out a Victory, which, as we see on the coin (Fig 24) holds a tænia or ribbon, extending from one hand to the other, as in the Victory on the hand of the Athene Parthenos On the coin the Victory appears with raised wings as if about to fly across the front of the god, that is, from right to left, which we know was the direction always associated with a good omen in the minds of the Greeks In the left hand of the god was a sceptre, glittering with various metals and surmounted by an eagle The coin omits the eagle, and of course can give no equivalent for the metal inlays. The sandals were of gold As regards the himation worn by the god, ancient writers tell us that it was richly enamelled, but say nothing of how it was disposed on the figure For that we must rely principally on the coin There we see that the himation is disposed in the manner usual with Pheidias-as in the east frieze of the Purthenon and on a Madrid relief. That is to say, it is wrapped closely round the lower limbs, then passes over the left shoulder, leaving the whole of the right arm and breast bare It will be seen that the end of the himation appears between the fore leg of the throne and the legs of the god. That is an artistic touch which occurs on some of the best Athenian reliefs, immediately

Fig 25 -Zeas Bronne found in Hungary Briti & Museum

after the time of Pheidias-most probably it had been introduced by

The throne was enriched with gold, precious stones, ebony, and ivory, while, as regards the mulitude of figures sculptured on it—on the top rail, on the sides, on the legs, the footstool, and the base of the statue,—to read of them almost paralyses the imagination. On the top of each of the two front legs of the throne, connecting them with the side rail above, was a group of a sphinx tearing the body of a Theban youth. On the coin this has been simplified into a sphinx alone, much as on the throne of Zeus on the Parthenon frieze. At a lower level apparently along the sides of the sext were Apollo and Artemis slaying the children of Niobe I suppose Apollo on one side slaying the sons, Artemis on the other slaying the daughters, each deity using bow and arrows.

The footstool rested on golden lions, and on it was sculptured t battle of Greeks and Amazons. Here the name of Pheidias, son of Charmides, was inscribed. On the base of the statue were sculptured, in a long comparatively narrow band, the deities of Olympos present at the birth of Aphrodite. In the centre of this assembly she (Aphrodite) was seen rising from the set. At each side of the central group the deities were disposed in the order of their importance, so that the greatest of them were nearest the ends.

I do not attach any particular importance to a bronze statuette which we possess in the Museum (Fig 25). It is fir too hard and formal to convey any idea of the style of Pheidas as we know it in the Parthenon sculptures. The head is not like what we expect. It is much too conspicuous, with its staring wreath and profuse hair. We regret it the more readily because the head on one of the coins, to which I have referred, not only retains in its way the placidity of Pheidas, but also renders the wreath and the hair much as we think they had been. Our bronze is wrong also in having a thunderbolt in the left hand. In short, it cannot be a direct copy from the work of Pheidas. On the other hand, no one can deny that the model on which our statuette has been constructed was the Zeus of Olympia. In later Greek, art there arose a tendency towards greater intensity of expression. As regards Zeus, people wanted a statue which should realise the passage of Homer. "When my head bows, all heads bow with it still." The curious thing is that a number of late

Greek writers associated this passage with the Zeus of Pheidias, whereas it only applied to the sculpture of their own day, such as our bronze statuette. But notwithstanding these modifications, there remained always in the later figures of Zeus much of the original of Pheidias, and of this our bronze is an illustration, because both in the posture of the god and in the disposition of the drapery it is correct in a general way

the arm of Hermes. But these things notwithstanding, the statue is full of the subtlest observation of bodily forms which cannot, one would

Fic. 26.—Hermes by Praxiteles. Olympia

think, be traced to any other than Praxiteles himself. Similarly, the motive or action of the Hermes is exactly of that very slight kind which we expect from that sculptor more than any other. Hermes, as we now

know, had held up in his right hand a bunch of grapes, and is watching its effect on the infant god of the vine. The drapery hanging on a tree stem, however beautifully executed, is only an accessory, serving as a

Fig. 27 -Marble Statue. Apollo Saursctones Louvre

foil to the delicate modelling of the bodily forms And when we think of it, that was a great chinge from the treatment of drapery in the Parthenon sculptures, where the presence of drapery is never accidental, but always shares in the dignity and solemnity of the figure. Even in

the draped figures of Praxiteles as in the Muses of Mantinea, we see that he had created a new type which differs from that of the Parthenon mas-

Fig 28 - Apollo From Tlessaly British Museum

much as it is a special study of a draped figure. Another point is the easy attitude of the Hermes, suggestive almost of indolence, or at all events of a happy nature. In others of the statues by Praxiteles, known

Fic 29 - Bronze Statuette Aptrodite Pourtales British Museum

to us from ancient copies, this ease of attitude is more strongly marked But from this point of view the most interesting of his works is the statue of Apollo Sturoctonos (Fig. 27), known to us from several copies in murble, and from one, a large statuette in bronze in the Villa Albani, which is the more important because the original statue was in bronze. The god stands leaning idly, one hand stretched out to a tree, his attention being attracted slightly to a lizard running up the tree-stem. He may be intending to kill the lizard, as his name Sauroctonos implies, but the attitude hardly conveys any feeling on his part beyond that of curiosity. The motive merely gives occasion for a youthful figure standing in an attitude admirably conceived to display the beauties of bodily form under a passing, almost trivial, emotion

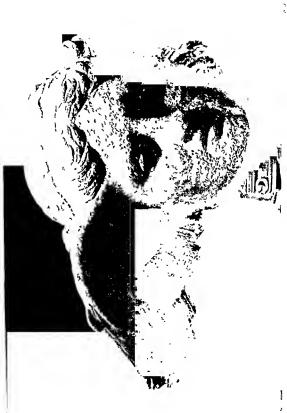

It is interesting to compare this Apollo with a marble statue in Madrid which it is now agreed is to be traced back to Praxiteles The Madrid statue represents Hypnos, the god of sleep, moving silently on his task of hushing mankind to rest. It is not only that the type of face is almost identical with that of the Apollo, though this counts for much because it is a very peculiar type, but in both statues we recognise at once that the aim of the sculptor had been to represent an action which must not be more than just perceptible In the Greek Anthology (Appendix 277) there occurs a few lines of verse headed an Enigma on Sleep to this effect "Being neither a mortal nor an immortal, but having some semblance of both, I live neither the part of a man nor of a god, but am always coming new into life and again vanishing from the present, unseen to the eye, yet known of all men" We have there in words the evanescent character of Hypnos The Greeks thought sleep a twin brother of death, and perhaps this relation of twinship was meant to suggest that same idea of a being differentiated from some one else only by the slightest touches Effects of this kind, whether in art or nature, are usually called fascination, and probably no better word could be found to serve as a general characterisation of the work of Praxiteles than its fascination

We have already spoken of the god of sleep and his silent seductive mission, in connection with the bronze head of Hypnos which is one of our treasures in the Museum (Plate II) We need only now consider the head again for the sake of its striking likeness to the heads of the Apollo and of the statue in Madrid The singular breadth of the face is a thing to

be noticed — It does not occur in the Hermes, where it would have unsuitable, but from the other instances where it does occur we may it conclude that Praxiteles had created it for a special order of being whose nature, as he conceived, there existed a happy imperturbability was probably well aware of the fact that under sensations of pleasure muscles of the face work adewards, and had sought to express this obsertion under a permanent type

The indolent attitude of leaning sidewards with the feet crossed nearly so, as in the statues of Apollo, is carried farther in a bron statuette of the same god from Thessaly which we possess (Fig 1/28). But the type of face in our bronze is too formal and too little sensitive for Praxiteles. The rendering of the hair is too hard and the boddle forms too vague. It may be that these faults are due to the maker of the statuette and not to the original from which he was copying. We cannot believe that Praxiteles had ever himself carried this attitude of indolence so far.

Praxiteles owed his greatest fame to his works in marble, but an ancient writer (Pliny, xxxiv 69), while admitting this, says that he nevertheless produced statues of the greatest beauty in bronze We have in the Museum a bronze statuette of Aphrodite obviously Praxitelian in style (Fig. 29). So far as the attitude and accessories areconcerned, there is a difference of opinion. In the list of bronze statues by Praxiteles, Pliny mentions a figure which he calls a Pseliumene, that is to say, a woman or goddess wearing or putting on an armlet. It has been argued that this Greek epithet may mean also the putting on of a necklace, and that this is the action of our bronze I doubt if this can The action is more like a reminiscence of the Diadumenos of Polycleitos, both hands being raised as if just having finished the fastening of a diadem or ribbon round the head. In our bronze the movement of the arms is practically the same as in that statue, and we know from tradition that Praxiteles did modify the older type of a Diadumenos by Polycleitos At all events it seems to me beyond question that our bronze is a Praxitelian variant of that statue adapted to a female figure It will be noticed how strong is the resemblance between the head of the statuette and the head of Hypnos (Plate II), especially in the very beautiful treatment of the hair with

its soft tresses carried back from the brow and bound in the simplest possible minner with a narrow fillet

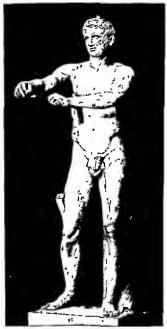

Fig 30 -Marble Statue of an Aporyomenos I atican Museum

After Praxiteles a number of years elapsed before the next great sculptor, L₃ sippos, appeared on the scene. He had been exclusively a sculptor in bronze, and one would expect to find among the many bronzes of our

museums not a few specimens directly traceable to his influence, the more so as he had been productive to an extraordinary degree, and because his works were in demand far and wide. But there are difficulties. Take for instance the statue of a young athlete scraping his arm with a strigil, usually called an Apoxyomenos (Fig. 30). The original bronze statue had been carried off from Greece to Rome, and is said to have so captivated

Fig 31 -Limestone F gure of Heracles British Mu eum

the young Tiberius that he had it removed to his palace, and only restored it to its public position because of the clamour of the populace. A beautiful marble copy of that statue is well known in the Vatican Museum. We are told expressly by Pliny that the bronze original was the work of Lysippos.

Then take a small limestone figure in the British Museum (Fig 31), which, for all its roughness, is certainly a copy of the bronze statuette made

by Lysippos as a present, it is said, to his patron, Alexander the Great, who carried it about in his campaigns to decorate his table Roman poets there is much romance as to the famous generals through whose hands that bronze had passed after the death of Alexander, and I need hardly add to the romance by stating that our rough copy of it comes from Babylonia, where the great Macedonian died The subject of the statuette by Lysippos was a seated figure of Heracles, called, from its constant appearance on the table of Alexander, Epitrapezios The sculptor of our limestone copy has inscribed his name on the plinth His name is Diogenes But I do not suggest that he was any relation of the Cynic philosopher whose interview with Alexander is more than ever familiar to us from Landseer's parody of the two dogs question is, does our statuette with all its roughness convey any fair impression of the original of Lysippos, and, if so, how is that impression to be reconciled with the very different style of the Apoxyomenos in the Vatican? It is conceivable that in the course of a long life Lysippos had begun his career under the dominating influence of Praxiteles, had gradually added more and more of action and animation to his statues, and had finally gone over to 1 preference for figures of the Heracles type in which muscular power was the ruling feature, the Apoxyomenos representing his earlier, the Heracles his later stage. To the later stage would belong his numerous statues of athletes, his portraits, and probably also the tendency towards statues of colossal size which appears in his Heracles at Tarentum, and was carried to an extreme in the Colossus of Rhodes by his pupil Chares

In the Apoxyomenos we have the small head, the apparent increase of height, and a new system of proportions superseding the older system of greater massiveness in the torso, which Pliny tells us was characteristic of Lysippos. You have only to compare it with the Hermes of Praxiteles to see the difference, and yet I am convinced that in the general conception, and in the rendering of the details in the Apoxyomenos, Lysippos was largely indebted to Praxiteles. It must have been also in the spirit of Prixiteles that he chose as a subject for a statue Kairos or Opportunity—a statue which is described by ancient writers as having represented a boy or youth hasting along on tiptoe with wings to his heels, his hair rich and full over the brow, but shorn at the back to show that Opportunity, once

let slip, cannot be caught up again, in his right hand a razor, in allusion to a Greek proverb, as old as Homer, to the effect that the turn of things is often balanced on as fine an edge as that of a razor (ετι ξυροῦ ακμῆς). We have no copy of that figure in the shape of statuary, but we have certain variations of it on engraved genis, and in a relief where he appears running hastily, having wings on his shoulders and heels, and holding out a pair of scales to indicate by how slight a turn of the balance great events may ensue. To my mind, this representation of Kairos, together with the literary descriptions of the statue, irresistibly recalls the Hypnos of Prixiteles. A statue of the "Fleeting Opportunity" would naturally start from such a figure as that of Hypnos, so much is there in common between the two thoughts of sleep with his silent movement and opportunity which waits on no one

Critics have been puzzled by the fact that so good a judge of art as the Roman writer Quintilian classes Praxiteles and Lysippos as the two Greek sculptors who approached closest to the truth of nature So far as Lysippos is concerned, this appears to be right. His list of portrait statues, his frequent choice of muscular types such as Heracles, Zeus, or Poseidon, and his minute attention to details, all seem to indicate a close observer of inture. But Praxiteles could not, it was supposed, be in the same boat. He made no statues of utiletes. The only known portrait from his hand was a statue of Phryne at Delphi, and even it, there is reason to believe, had not been a portrait in a strict sense, but rather an ideal figure, which some people, as Phiny says, had identified as Phryne A close observer of prissing shades of character or of emotion, Praxiteles was, so far, rightly classed along with Lysippos as regards truth to nature, the one more in a spiritual, the other more in a physical sense.

Among the bronze statuettes, which it is usual to identify with the style of Lysippos, is a figure of Poseidon found at Dodona towards the end of the last century, and now in the British Museum (Fig. 32). In the statuette the god stands resting on one foot, and has held out in the left hand most probably a dolphin indicative of the sea, while his right hand has been raised to rest on a trident held vertically. The proportion of the short torso to long legs answers to the new canon which Lysippos introduced. According to that canon the head ought perhaps to have been smaller But in art, as in poetry, the god of the sea was known for his massive

head and abundance of hair. The sculptor could not change that type Lysippos was famed above his contemporaries for minute finish down to the smallest details. Another ancient statuette could not be found where this is more admirably exemplified. The hair and beard are full of the most beautiful workmanship carried into the ninnutest details, while the powerful bodily forms are rendered with an extraordinary refinement extending to the observation of the finer nuiscles in the feet and even to a vein in the left arm. The auimnation he was said to have imparted to his statues (animosa signa) is conspicuous in the bronze

From the same find at Dodona we have also a figure of Zeus, which may equally claim to belong to the school of Lysippos (Plate III) Extremely remarkable are the intense expression of the face, and the minute finish of the masses of hair and beard. In the bodily forms the propor tions are those of Lysippos but there is a want of the finer modelling of details and the clearer distinction of the various parts of the body, so noticeable in the Poseidon Lysippos is known to have produced several statues of Zeus, among them a Colossus at Tarentum, measuring in height over 60 feet It is said that this statue had been so balanced that it could be moved by the hind, and yet could resist the force of storms, the explanation being that the sculptor had provided a column or support on the side opposite the usual weather quarter, leaving a slight space between the column and the figure to allow of yielding we may add also Fig 33 from the same find at Dodona, though as yet we have no evidence as to how Lysippos rendered his draperies, and cannot therefore be confident in associating this bronze with his style Still more difficult is it to feel on quite safe ground in assigning to him or to his influence a very beautiful bronze in the British Museum given on Plate IV, representing a youthful heroic figure seated on a rock and looking eagerly downwards The singular animation of the face answers to what we know of Lysippos, but the largeness and simplicity of style, displayed both in the bodily forms and in the drapery, are not quite what we are prepared to expect from him. So far as the bodily forms are concerned, we expect to see them more broken up by details Therein, however, we may be wrong, and in any case our bronze, if it does not fully illustrate his style, is one of the finest existing examples of

Greek bronze-work at its ripest period The figure is cast solid, and has been attriched to a background of some sort. The eyes are inlaid with silver

I will notice next one of the bronzes of Siris (Fig. 34), that is the name which for many years has attached to two bronze reliefs said to have been found near the river Siris in Southern Italy in 1820. It was in this locality that the memorable battle occurred in which Pyrrhus was signally defeated The wish to connect everything beautiful or remarkable with some famous person produced the suggestion that these bronzes may have belonged to the armour worn by Pyrrhus on that day The suggestion was entiring, and not much worse if so bid as many others At all events we have the bronzes, and are concerned most with their beauty as examples of Greek relief From a technical point of view, these bronzes are no less than marvellous as examples of repousse work. The quality of the bronze must have been originally fine beyond all praise or comparison, to admit of being hammered up to the extraordinary extent which it reaches in the chest and faces of the Greek In some points it has failed, and separate pieces have been made and attriched in their place. Then, again, the minuteness with which the whole surface has afterwards been gone over is endless, most elaborate patterns have been incised on the shields, the beard has been worked with almost microscopic faithfulness, and yet with perfect freedom of touch, the minutest folds of the drapery have been followed from their origin to their final disappearance into some other larger fold, or into airy nothingness. These are facts which suit no Greek sculptor, of whose practice we know from ancient writers, better than Lysippos He was famed for a combination of minute finish and a rigorous system of proportions. He was the most prominent sculptor at the time at which we should place these bronzes from other considerations, and without claiming him as the sculptor of them, we may yet fairly regard them as influenced by his manner, as in fact among the best evidence we possess of his special method of working

We may pass on to a bronze equestran statuette in Naples Museum, which appears to have been part of a group representing Alexander on horseback striking down at an enemy (Fig 35) We know that after the buttle at the Granicus Lysippos was directed to

group was erected in Macedonia but subsequently was carried off by Metellus to Rome and possibly the Naples bronze represents the central figure of that composition

VΙ

Gaulish Bronzes

Certain ancient writers attribute to the Gauls the invention of enamelling and niello on bronze and silver (Philostratus, Imag 1 28, and Phiny, xxxiv 162), and it is a fact that many specimens of bronze vases, fibula, and other objects have been found richly if sometimes rudely enamelled. The process was to groove out the patterns on the surface of the bronze Into these grooves, forming generally floral patterns, a paste of various bright colours was inlaid, such as red, white, blue, and green. But it does not appear that this paste had been fused in the true sense of an enamel, that is to say until it took the form of glass, though the Greek writer who mentions this Gaulish invention expressly speaks of fusing the inlaid substance.

Let us begin with a bronze statuette in the British Museum found at Barking Hall, Suffolk (Fig. 36). It is about 2 feet high, and must have been a work of considerable difficulty, if we think of the elaborate extent with which the cuirass is decorated with patterns inlaid partly in silver and partly in a sort of enamel, the leaves of the rosettes being alternately of enamel and silver. I take this figure first, because it seems to stand on the border between pure classic workmanship and native art. It has been described is a portrait of a Roman Emperor or an imperial personage of some sort, but an insuperable obstacle to its being an imperial Roman is that the hair is bound by a simple ribbon or diadem, whereas the Roman emperors wore wreaths, usually of laurel, until a very late period, when they preferred rich gold dindems. Clearly the statuette cannot represent a Roman. On the other hand, nothing was more distinctive of a Greek king, from the time of Alexander the Great onwards, than a flat fillet or

ribbon worn exactly as on our statuette. That alone is conclusive evidence that the figure is either Alexander or one of his successors. The portraits

Fig. 36 .- Bronze found at Barking Hall, Suffolk. British Museum.

of his successors are known from their coins, and we may fairly exclude them from the running. There remains, therefore, only Alexander himself. We have already spoken of certain portraits of Alexander by Lysippos.

VI

Gaulish Bronzes

Certain ancient writers attribute to the Gauls the invention of enamelling and niello on bronze and silver (Philostratus, Imag 1 28, and Pliny, xxxiv 162), and it is a fact that many specimens of bronze vases, fibulae, and other objects have been found richly if sometimes rudely enamelled. The process was to groove out the patterns on the surface of the bronze. Into these grooves, forming generally floral patterns, a paste of various bright colours was inlaid, such as red, white, blue, and green. But it does not appear that this paste had been fused in the true sense of an enamel, that is to say until it took the form of glass, though the Greek writer who mentions this Gaulish invention expressly speaks of fusing the inlaid substance.

Let us begin with a bronze statuette in the British Museum found at Barking Hall, Suffolk (Fig 36). It is about 2 feet high, and must have been a work of considerable difficulty, if we think of the elaborate extent with which the cuirass is decorated with patterns, inlaid partly in silver and partly in a sort of enamel, the leaves of the rosettes being alternately of enamel and silver. I take this figure first, because it seems to stand on the border between pure classic workmanship and native art. It has been described as a portrait of a Roman Emperor or an imperial personage of some sort, but an insuperable obstacle to its being an imperial Roman is that the hair is bound by a simple ribbon or diadem, whereas the Roman emperors wore wreaths, usually of laurel, until a very late period, when they preferred rich gold diadems. Clearly the statuette cannot represent a Roman. On the other hand, nothing was more distinctive of a Greek king, from the time of Alexander the Great onwards, than a flat fillet or

ribbon worn exactly as on our statuette That alone is conclusive evidence that the figure is either Alexander or one of his successors The portraits

Fig 36 - Bronze found at Barking Hall Suffolk British Museum

of his successors are known from their coins, and we may fairly exclude them from the running There remains, therefore only Alexander himself We have already spoken of certain portraits of Alexander by Lysippos One of the attitudes in which he was represented was, as we know, that of standing with one foot raised on a rock or such like, the head appearing to be turned a little sidewards so as to conceal his natural defect of a crooked neck. In particular there was one in which he appeared with his face looking towards the heavens, as he was wont to look, says Plutarch, and turning his neck gently, so that some one on seeing a statue of him in this attitude wrote an epigram to this effect, that the bronze seemed to be looking towards the heavens and saying, "The earth is under my rule You, Zeus, hold Olympos" Several other Greek epigrams exist to much the same purpose. It is known also that in that instance Alexander held a spear, necessarily in his right hand. In our statuette the raised right hand has obviously rested on a spear. These are facts enough to justify us in regarding it as a figure of Alexander derived from a famous original of Lysippos.

The face of our bronze is that of an ideal youth, yet the hair springs from the foreheid somewhat in the manner characteristic of the portraits of Alexander No objection can be taken to the cuirass and sandals. They are such as he might have worn, except for the rich enamel on the cuirass, and particularly the promiscuous way in which the patterns of rosettes are scattered all over it. We must acquit classical sculptors of any share in that

The treatment of the hair seems at first sight purely classical, all the more so when we remember how frequently the existing Gaulish bronzes are characterised by rough shaggy hair, in keeping with the habits of the people. Yet when we examine the hair closely, in particular the loose way in which the diadem lies among it instead of being tightly strained round the head, we detect a want of meelligence which cannot be ascribed to a classical artist. It is best explained by assuming the sculptor to have been a Gaul or Briton making a careful copy from a Greek original swell as he could. In the flaps of the cuirass, as they fall over the raised thigh, there are one or two fine touches of movement which could only have been derived from a Greek original. The proportions of the figure are abnormally heavy, the torso being much too massive and the legs too short. It would be hard to find any parallel for that in classical art

Yet, for all these shortcomings, we have in the Museum bronze

the finest existing specimen of Gaulish sculpture inspired by a Greek original

We may take next a bronze in the British Museum, found in France in the department of the Rhone (Fig. 37). It is a figure of the youthful

Fig 37 -Gaulish Statuette of Bacchus British Museur

Bacchus holding in his right hand a wine-cup. But the wine-cup or cantharus which he holds is not of the shape proper to Bacchus. It is, in fact, a smrll amphora. No classical artist could have ever made that mistake. The figure itself his obviously been studied from a Greek original Yet it is throughout pervaded by a difference of artistic feeling, which it is easier to recognise than to define—a difference such as we perceive often in

literature between an excellent translation and the original. The face and disposition of the hair, together with the pose of the head, remind us of Praxiteles as we know him in the statue of Apollo Surroctonos. The attitude might pass for Praxitelian. But the extreme softness of the bodily forms goes beyond anything with which we are acquainted from his hand, though it must be allowed that at present we know nothing of how he had rendered such figures as the youthful Brachus. There must have been more effeminacy in them than in Hermes and Apollo.

Let us now take an example of a different kind (Fig. 38) The British Museum possesses a large bronze statuette, which was found near the Roman wall in Cumberland or Northumberland, it is uncertain which. The bronze is gilt and still looks almost like gold. It is a figure of Herreles and since an alter inscribed to the Tyrian Heracles has been discovered in that neighbourhood, we may furly assume that our bronze may have been made for some devotee of that particular deity. Now we know that some of the oldest coins struck in Gaul and Britain are obviously imitations of the more ancient coinage of the Greek, island of Thasos, on which there occurs a figure of the Tyrian Heracles not exactly identical with our bronze, but sufficiently like for identification

The sculptor of our bronze was under no obligation to keep close to the type of Heracles on the coins of his day. He may easily have had access to more archaic types like the two vases by Calamis mentioned in Pliny (xxxiv 47) In any case it is an archaic Greek element which predominates in our statuette The girdle round the waist, with its three clasps fastened in front, corresponds perfectly to archaic bronze girdles in the British Museum The short chiton, drawn tightly across the body and gathered in folds at the sides, was not worn by Heracles except in archaic Greek art of about the sixth century B c The short body of the figure, in striking contrast to the long massive legs, is obviously archite. Equally so is the manner of standing with both feet flat on the ground The way in which the lion's skin is worn, the head of the lion fitting like a cap on the head of Heracles, is archaic, but not exclusively so It listed on to later times, yet we may fairly rank it also with the other archaic elements of the figure The lion's skin is twisted round the left arm like a piece of drapery instead of skin. That we must set down as a mistake. As regards the forcible action of the left hand with the fingers tightly com

Fig 38 .- Heracles. Found in Cumberland. British M

pressed, the only explanation I can find is from an archaic Etruscan bronze in the British Museum where Heracles grips with his left hand the tail of the lion's skin exactly in this manner. The right hand, which is raised, has held a club. The only non-archaic feature in our statuette is the face, which is strikingly of the type that came into Greek art at the time of Alexander the Greet, and, as such, might have been familiar to Gaulish sculptors, on coins or otherwise.

For these reasons our statuette is peculiarly interesting. It shows how a phase of Greek art, which had been abandoned for centuries in Greece itself, had survived in specimens brought to Gaul or Britain and had there appeared to native sculptors as a new light on their pith, much as the archaic pre-Raphaelite painting of Italy appealed to our countrymen not so long ago. The statuette is cast solid, and in this respect may perhaps serve as a confirmation of what Pliny says, that the true art of casting in bronze had been lost before his time.

We have also in the British Museum a statuette of Mars from the Rhineland which may fairly come within the scope of our present enquiry (Fig. 39) It represents the god in full panoply with nothing Celtic in his armour or costume The model has been purely classical But let us examine the figure The face and hair are not Celtic in type, but equally they are non-classical in the roughness with which they are represented, reminding us in this respect of what is constantly found among Gaulish bronzes. The proportions are ungainly and maccurate to a high degree, and yet there are not a few details which recall Greek art of a good period For instance, the form and decoration of the helmet have been derived from the Athene Parthenas of Pheidias in the main The sphing which has supported the crest was an invention of Pheidias The two gryphons here attached to the sides of the helmet were placed by Pheidias on the upturned cheek-pieces of Athene's helmet, and were there rendered in relief, not, as here, partly in the round The visor, which in the Athene retained its pure Greek form, is here converted into a mask, as if of a dead person, reminding us of a bronze helmet in the British Museum, found at Ribchester in Lancashire, which has a visor entirely in the form of a sepulchral mask. On the lower part of the visor of our statuette is a ram s head in relief on each side, which also is a not uncommon form of decoration on classical helmets The two graphons confronted on the

cuirass are obviously Greek in origin, as is also the small head of Medusa in silver on the breast. On the greaves, in front of each knee, is again a small head of Medusa in silver, the one completely defaced, the other still showing the features of the Gorgon. Among the Greeks these misks of Medusa were worn as charms against danger. We find them repeatedly on their bronze greaves, especially on those of the good period, as on the splendid bronze leg we possess in the British Museum. The greaves are laced down the back, and the laces inlaid with a reddish Celtic ename! The flaps of the cuirass are inlaid with silver, as are also the eyes of the figure.

We must notice the way in which the chiton is rendered, where it is visible, hanging below the flaps of the cuirass. The chiton is made to open at each side, and to fall on each side in a double set of zigzag folds such as we call pieryges or wings when speaking of the chiton of Athene. But the Greek chiton can only have these double zigzag folds on one side of the figure because the chiton is only open on one side. It is incredible that the sculptor of our bronze could ever have seen a Greek figure with a chiton thus open on both sides. More probably he had been struck by the singular charm which Greek artists constantly obtained from those zigzag folds in their draped figures, and had not recognised the fact that they were confined to the left side, still more that in a man's chiton they do not exist at all. That, of course, is ignorance, but it is ignorance coupled with artistic perception.

Heracles came nearest in the minds of the Gauls and Britons to what they conceived their Supreme Deity to be like

did not keep too close to the classical model, rather introducing variations suitable to their own ideas and circumstances. They called Heracles Ogmios, and we have in the Greek writer Lucian (Heracles) a description of a picture of that deity which may be taken as perhaps an extreme instance of the freedom the Celtic artists allowed themselves in adding to the Greek type. The Heracles or Ogmios which. Lucian describes wore the usual Iron's skin, held a club in his right hand, a bow in his left, with a quiver at his side. So far he is quite Greek.

But in most cases they did in most cases they arised the miscolar above in adding to the Greek type. The Heracles or Ogmios which. Lucian describes wore the usual Iron's skin, held a club in his right hand, a bow in his left, with a quiver at his side. So far he is quite Greek.

But in most cases they did in most cases they did not a perhaps an extreme instance of a man in extreme old upon which. Lucian describes were the usual Iron's skin, held a club in his right hand, a bow in his left, with a quiver at his side. So far he is quite Greek.

But in most cases they did not be sure introducing variations.

Heracles of the gauge for the product of the mischelland.

of Ogmios. Astonished at so singular a conception, Lucian injuired of an educated Gaul what might be the meaning of the picture,

Fig 40 - Gaulish Heracles Bronze Statuette found at l'ienne in France.

and was told it was a representation of the power of eloquence to draw men.

But Lucian's picture of Ogmios is hardly more curious than a bronze

statuette found some years ago at Vienne in France (Fig. 40) It is a figure of Heracles of a good classical type, though with the usual differences of style, which, as I said before, are like the differences between a good translation and an original What is startling is the ring of barrel-shaped objects which appears like a nimbus above the head of the figure These curious objects are supported on a thin rod which rises behind the statuette meaning of them is still far from clear, notwithstanding the amount of attention bestowed on them by scholars versed in Celtic literature much to be regretted that this is so, because these objects are certainly symbols of some kind which must have conveyed a definite meaning to the ancient Gauls They cannot be merely capricious ornaments In many cases we find among Gaulish sculptures a god having the symbol of a hammer or mallet, and it is not difficult to explain that deity in connection with the northern god Thor or the Greek Hephaistos Applying this to the bronze statuette of Vienne, we could accept as hammers the five smaller things which radiate from the large cylinder But the large cylinder itself must surely be something different. It is more like a barrel and possibly that is what it was meant to be Heracles as a wine-god would not have appeared particularly strange even to the Greeks They were familiar with his habits To the Gauls, in the wine growing districts of France, he might easily have assumed the additional functions of a wine-god

There is one thing yet which must not be overlooked. Among the Gaulish bronzes are many figures wearing the national costume, which consists of a thick buff coat wrapped closely round the body, overlapping down the front, and kept together by a girdle round the waist, to which we may add occasionally trousers of a chequered pattern. The question we have to consider is whether the Gaulish artists had themselves been the originators of this idea of representing their kinsmen in the garb in which they lived. That a people just emerging from barbarism could have had the faculty of creating in artistic type such as this of their own nationality is more than we are prepared to believe. The skill with which the costume is rendered in not a few instances has clearly been learned from classical sculpture, and, above all, we have to remember that one of the most striking features of later Greek art was the prominence given to figures of Gauls, carefully represented both in character

Fig 41 -Gaul it Ch of Bronze Statuette British Museum

and costume The old Celtic peoples had been a terror to the Greeks almost from the time of Homer They swooped down on the rich cities of Asia Minor like Children of the Mist as they were In Greece itself they got as far as Delphi under their leader Brennus early in the third century BC For nearly a century before then Rome had been trembling at the name of the Gauls But from that time onward great battles hecame frequent In the second century BC the King of Pergamos in Asia Minor defeated the Gauls in a decisive victory He must needs erect on the Acropolis of Athens a monument of his success, and this, so far as we know, was the first occasion on which the nationality of the Gauls was represented on any great scale in Greek sculpture The Emperors of Rome followed in a similar spirit, covering their triumphal arches and columns with endless expeditions against the Celts, battles, sieges, and all the horrors of war. So that among what survives of the sculpture of those days we find innumerable studies of the personal appearance of the Gauls, the feelings of despair with which they accepted defeat, and their sufferings when wounded Probably the examples hest known to you are the so-called "Dying Gladiator" in Rome, which is, in fact, a wounded Gaul, and the group of a Gaul slaying his wife rather than see her become a Roman captive I mean the group known as Arria and Pætus in the Villa Ludovisi in Rome Fig 41 will serve as an example in bronze

In the mirror of works such as these the Gauls saw themselves for the first time in an artistic sense. It was not necessary for them to create new types of themselves, even if in those days they had possessed enough imaginative power to do so. It is reported of an ancient Teuton inho had gone to Rome on an embass, that, being shown a statue of an old shepherd leaning on his staff, and being asked what he would value it at, replied that he would not take him as a present even if he were alive But a remark like this is not enough to condemn a whole nationality. You may overhear much the same any day. What we do know on the strength of the Carlisle bronze and not a few other works in sculpture is, that the peoples in Gaul and Britain were being familiarised, slowly perhaps, with Greek art even long before the Roman conquest.

In the sixth century B c a Greek colony had been established at Marseilles, whence it could command the trade of the Rhone valles. At

that time, and even before then, Greek merchants were finding their way by sea to the copper mines of Spain, and obtaining, directly or indirectly, tin from Cornwall Greek colonists were gathered round the silver mines of Thrace and along the north shore of the Black Sea, especially in the neighbourhood of the Crimea, where the inhabitants, though known as Scythians, were a branch of the widely-spread Celtic race From the tombs of Kertch we know to what extent the Greek settlers had imported beautiful works of Athenian art for exchange with the products of the rude Scythians, and from ancient literature we know how eagerly some of the chiefs of that race had applied themselves to Hellenic civilisation In Central Europe there have been found from time to time valuable objects of archaic Greek art, such as the gold treasure of Vettersfelde, or the lovely helmet of Berru, with its ornamentation of the Mycenean Age I can only mention these things briefly, because all I wish to suggest is that centuries before the Roman conquest there had been going on among the Gauls and Britons a slow leavening of artistic taste by means of works of art imported from Greece

PREFACE

It may be said of a certain number of Greek terracottas that they do not need much explanation If a statuette is charming in its expres sion, its pose, and its costume that was about all it was meant to be Or if we meet with a figure taken from common life, such as an old nurse with a child on her lap, and are amused by it, that again was about all it was meant to be Only, what we admire through an acquired taste, the old Greeks for whom these things were made admired instinctively The terracottas of that class reflected the daily life of the Greeks, refined upon just enough to gratify the average household tastes of the time They do not call for much mythology, and in an artistic sense they are not very ambitious-far less so than the bronzes, for instance, or the painted vases On the other hand, no one ean thoroughly understand that simplest class of statuettes without a knowledge of the people for whom they were made, and of how it came about that the artistic tastes of the Greeks assumed different aspects in different centuries

That is one instance where the classical learning and artistic discrimination of Miss Hutton come in usefully Still more necessary is her aid if one desires to go further into the subject. For instance, it may not be difficult to distinguish a Tanigra statuette from among the others without knowing precisely why, but to be assured and confident in the matter means a careful study of the interesting problem of local fabrics in Greece and her colonies. It will then be seen, to take one illustration, that the terracottas of Sicily compared with those of Tanagra are like a different dialect of the Greek tongue. Or again, it may not require much artistic perception to distinguish at first sight an archaic terracotta of the sixth century is c. from a later one of the third century is c. But if this first impression is to be deepened it can only be by a careful

analysis of artistic details, such as are characteristic of each of these periods, supplemented by knowledge of artistic development in Greece during that most momentous interval of three centuries. In the archaic period there is obviously greater refinement of execution and greater variety of subject. There are comparatively few statuettes of fashionable young women (coræ), the abundance of which in the later periods justified the name of coroplastæ, applied to the makers of statuettes. That is a change both in style and in subject which can only be discussed and m some degree explained after laborious research such as Miss Hutton's in a region of archæology which hitherto has tempted hardly any scholar.

Apparently it was not till a late period that the coræ began to take the form of mourners, and to be associated with funeral ceremonies like the "Pleureuses, as they are called, who surround the sarcophagus from Sidon now in Constantinople The terracottas in question are perhaps rather more demonstrative, but there is a further analogy between them and the "Pleureuses' in the fact of their being often placed in groups on large terracotta vases, which vases were intended for the furniture of a tomb almost as explicitly as is a sarcophagus. We know that a large proportion of the terracottas, whether archaic or late, have been found in tombs, and we know that the same is true of the Greek painted vases But just as there was one class of vases-the white lekythi-which had been made expressly for funeral purposes, so also there was at least one class of terracottas-the mourning corac-similarly destined to the tomb from the first But these terracottas and vases, however melancholy in action or in subject, and however well adapted to occasions of death, had no monopoly in the furnishing of a tomb Miss Hutton's pages show that abundantly, and at the same time give many curious instances of other purposes for which terracottas were produced

One of the first things a student wants to know is how the terracottas were made, and that is a point on which Miss Hutton has taken special pains to be minute and exact in her information, describing at some length the process of making the mould and taking an impression from it in soft clay, on which the artist could, if he chose, bestow any amount of finish With a few moulds and some dexterous touches on the soft clay, it is astonishing what a variety of figures could be produced. Then came the

GREEK TERRACOTTA STATUETTES

CHAPTER I

THE USE AND MEANING OF THE STATUETTES

"This little toy was mighty Brutus' pet,
Great its renown, though small the statuette
"Gloria tam parvi non est obscurs sigilli
Istus pueri Brutus amator erat"—Makriat, Epg xiv 1"1

GREEK terracotta statue tes have a double charm, archaeological and aesthetic, the one appealing to a rather restricted class of students, the other to a much wider public

To the archæologist a statuette is interesting in proportion to the evidence it affords of successive phases of thought and custom and the light it throws on obscure points in the evolution of religion and art, from this point of view archaic figures of the sixth century, some of which are frankly ugly, are much more attractive than the charming genre figure of the fourth or third century, whose interest lies mainly in its prettiness. So far, except in France, Greek statuettes have been chiefly treated from the archæological standpoint, but the present publication is addressed to that wider public which, though not repelled by their archæological interest, is mainly attracted by their æsthetic charm, and curious as to the circumstances under which they had their being, and the civilization which they represent It therefore deals more particularly with those figures which are beautiful, roughly speaking those of later date than the middle of the fifth century B c and which represent genre subjects or hieratic and mythological ones, modified by the influence of the genre types It is, however, impossible to entirely ignore the archaic statuettes of

the seventh, sixth and fifth centuries, for the genre figures are their lineal descendants, and by so doing we should lose the key to the most interesting and certainly the most important problems which arise in connection with these figures, the uses to which the Greeks put them and the meaning they attached to them

The difficulty of the problem is much increased by the absence of definite contemporary statements, not a few classical writers allude incidentally to the figures, and valuable information cut be gleaned from these scattered hints, but in the mun we must rely on the results of excavation, which in the case of terrucotta figures are often in accessible, partly because in former days they were generally over looked owing to their relative insignificance, and partly because the results of early excavations are often unmethodically recorded

By far the greater number of Greek statuettes, and almost all the best specimens, have been taken out of tombs, but many are found on the sites of temples and houses, and it is with respect to the last-named finds that we especially feel the want of accurate records, because the only Greek town preserved to us is Pompei, and its excavation dates from so far back that most of the documentury evidence has disappeared. The material at our disposal is, however, considerable, and by its help we may hope to explain the allusions of classical writers.

The evidence provided by the excavation of temple precincts is extremely important as it fully bears out the statements of Greek authors as to the practice of dedicating terracotta figures in temples and shames. The best known pissage is in the Phedras of Phato 1—"By Hera," quoth Socrates, "a fair resting place, full of summer sounds and scents. Here is the lofty and spreading plane tree, and the stream that flows beneath it is deliciously cool to the feet Judging from the ornaments and the images, this must be a spot sacred to Achelous or the nymphs."

It may be confidently stated that every temple or shrine, so far excuvited, has yielded numbers of these objects, and the finds are

¹ Pl el 220, B A vase in the Bibliothèque Nationale in Paris shows a fountain decorated with terracotta figures

usually of a very peculiar character, an accumulation of broken figures of varying type and style, always accompanied by pieces of pottery, small bronzes, etc. It is well known that the temple guardians periodically emptied the shrines under their charge of the votive offerings which had accumulated there, a some of the metal objects were melted down and made into basins and layers for the temple service, but nothing could be done with the terracotta figures or vases, so they were thrown away, but to prevent the desecration of objects which had belonged to a divinity, they were first broken

In all such collections there are broadly speaking two classes of figures—those which have some obvious connection with temple worship, and those which have not Under the first heading we may class representations of the local divinity or of other divinities, of persons and things employed in temple worship and votive offerings proper, such as models of animals, limbs, etc., under the second come grote-que figures, genre figures and missellaneous objects

The relative proportions of these two groups vary considerably, and if we take the finds at two Greek temple sites—the shrine of Demeter and Kore at Tegea in the Peloponnesos, and the temple of Athene Kraneia at Elatæa in Northern Greece—we obtain the following results At Tegei two hundred figures of the local goddesses, five hundred writer carriers (temple attendants) and a number of pigs (sacrificial animals) At Elatæa only eight statuettes of Athene, and twenty-two of other divinities, eighteen dancing figures (temple attendants) and one of a priestess bearing a pig

The second group, consisting of grotesque and genre figures and miscellaneous objects, was represented at Tegea by six hundred grotesque and ten genre statuettes, among the latter a woman riding on a camel. Athene, on the other hand, received only twelve grotesque figures and seven hundred genre, chiefly matrons of fourth-century type (Tig. 20), and such miscellaneous objects as a dolphin, a tortoise fans, jointed dolls (Fig. 2), and weights and measures

These two finds establish the important fact concerning the use of terracotta figures in temples, that any figure was a suitable offering to any divinity,—and that though some may have been more appropriate

in particular circumstances than others, there was no class that could not be given. One of the most curious points elicited is that the image of another divinity was apparently as acceptable an offering as one of the god or goddess to whom the dedication was made, no doubt such figures were sometimes copies of the statue of the pilgrim's own local deity, especially when the local statue was a celebrated one, but at Elatea we find Eros, Psyché, Leda, Dionysos, Aphrodite and Demêter, and it is difficult at first sight to see how they can be considered appropriate offerings to Athené, because we read into them an esoteric character which they did not possess. It was the intention of the giver, the fact of their being offered, which made them appropriate offerings, not any inherent fitness of their own, and that is why the objects uncarthed are so various in character. Such figures as pigs birds, water-carriers, dancers and priestesses present no difficulty, for they may embody a certain idea of substitution, of performing by deputy duties whose constant performance was impossible. Again, the offering of votive limbs to any deits, not merely to Apollo and Asklêpios, is too natural a form of thanksgiving to require any comment, while classical writers supply an explanation of the presence of toys and jointed dolls in the sanctuaries of Apollo, Artemis and Aphrodité, when they tell us that a maiden before marriage, and a boy at about fourteen, dedicated their toys to these deities, a custom referred to in the following epigram which accompanied such an offering-

TO ARTEMISA

"Maden, to thee, before her marriage Timarete gives Her cap, her tambourners, her favourte ball, And is is meet, oh! Artemis, the maden brings Her childhood's toys, her dolls, their clothes and il!"

but dolls are found in the shrines of other divinities, not merely in those of Artemis and Aphrodité

¹ Τιμαρίτα πρὸ γάμαιο τα τιμπανα, την τ' ἐρατεινην σφαίραι, τόν τὲ κόμας μυτορα κυριζολλοι, τὰς τε κορας, Λιμικτι, κορα κόρα ὡς ἐπεικες, ἄνθετο, καὶ τὰ κορᾶν ἐδεματ', 'Δητέμιδι — Anibol Pal 11 280.

Objects which had been the personal property of the giver, such as fibulæ, hairpins, weapons and jewellery, were often presented, and a number of the dedicatory epigrams which accompanied them are collected in the sixth book of the Anthologia Palatina, among them the following by Mnasalcos on a bow and quiver given to Apollo.1

"Phæbus, to thee this curved bow and empty sounding quiver Are offered at thy sacred shrine by Promachos the giver. But ah! the shafts that used within that printed case to rattle, Now in the formen's hearts are sheathed whom he hath slain in bittle." Translated by J. H. MERIVALE.

With these offerings we may class such statuettes as show marked differences of clay and technique, or peculiar artistic merit, and in such cases the personal element sufficiently explains the gift, but when all these deductions are made, there remain a vast number of figures whose dedication cannot be accounted for on such grounds, as for instance the hundreds of figures representing a Greek woman of the day, offered to Athené; and in support of the theory that the choice of an offering was more or less the result of chance we may quote another epigram showing under what circumstances a school-boy offered a comic figure to the Muses 2

> "Konnaros' skill with style and reed has guized the writing prize, And eighty shining knuckle-bones delight his eager eyes. I am funny little Chares, and 'mid his contrades' glee, To the Muses who inspired him, he dedicated me."

Our information as to the use of terracotta figures in private houses is based entirely on the excavations at Pompeii. It is so far unsatisfactory, that we have no means of discriminating between local and general custom, a point of great importance in this case, because

¹ Σοὶ μὲν καμπίλα τόξα, καὶ ἰοχέαιρα φαρέτρη, δώρα παρά Προμάχοι, Φοίβε, τάδε κρέμαται ίοις δε ττερύεντας άτα κλότον αιδρες έχοισεν ev spadiais, odoù feiria di cupereuv - Anthol. Pal vi. 9.

though we are justified in including Pompeii among Greek towns, objects found there belong chiefly to the middle of the first century A D Some few are præ-Augustan, but noue can be assigned to an earlier date than the end of the Hellenistic age. The term is a conveniently vague one, and is applied to the last three centuries of the pagan era when the empire of the Greeks extended over the known world, but was one of taste and intellect only, and every educated person, whether Greek or barbarian, was a Hellene and adopted Greek customs, with such modifications as were suggested by local requirements customs of Pompen do not therefore prove Greek custom as the customs of Athens would do, but they are the only evidence available, and therefore for the present must suffice

About two hundred perfect figures of varying size have been dis covered in the ruins of Pompeii, they appear but sparingly in the better class houses, but were found in increasing but not large, quantities as the industrial part of the town was uncovered. It is therefore evident that by AD 79 they had gone out of fashion among the rich, and were even losing their popularity among the poor A number lay in the outbuildings (probably the slaves quarters) of one of the larger houses, but when found actually in the palaces, they always show some novelty of technique or style which explains their presence there Their comparative scarcity is doubtless caused partly by a change of taste, which led to the employment of metal rather than clay, even for vases, but something may be due to an earthquake which took place in AD 63 Great duringe was done by it and the necessary repairs were not entirely completed when the town was overwhelmed in AD 79 The terracotta ornamentation of the temples suffered severely, and there is every reason to suppose that the figures did so too, but fortunately sufficient remain to show the uses to which they were put, and their presence in larger numbers in the poorer houses is in itself a proof that at one time they had been more common in the richer ones

In the latter all statuettes stand in niches, whether in the atrium, the inner rooms or the garden court sometimes the high garden wall contained recesses in one case six, two still holding figures

The most usual place for them was evidently the atrium, where

they are found in company with small bronzes of a kind whith that the niche was the lararium or shrine of the household. In the House of Lucretius, this continued five such bronze terracotta bust of a boy with a built round his neck. A simil in another house held two bronzes, a warrior and a Diana, terracottas, a female bust and a seited woman with a child in h

Besides the niches which served as lararia, there were oth the inner door of the house, for instance Minerva with shi bowl had her place in one peristyle, and a similar figure in a position was found at Herculaneum. This custom of placing under the protection of a divinity was a common one in Greis referred to in several dedicatory epigrams, as ¹

> "A hero warder of Eetion's door I stand, No weapon save my sword 15 in my hand A little sentinel just fits a little shrine, He hates the 'Guards' so chose me from the 'Line'"

Similar recesses were found over the doors of inner rooms Greek commentator refers to the custom of placing a little te figure of Hephaistos opposite the hearth as "protector of the fire

Those figures which stood either on pedestals in the niches greater security in depressions in them, were probably objects of a but the niches themselves were not used merely as lararia, one peristyle of the House of M Gavius Rufus contained a relief of carrying off Anchises, a group of two slaves bearing a palanquin figure in it, a seated figure of Abundantia and a crouching slave number of figures it contained suggests that it was a cupboard, but were also used to display the figures, for the garden cloister of the of Julia Tehx, one of the most gorgeous of the Pompeian decorated in the taste of the Neronian age, had eighteen, con alternately small herms and terracotta figures of which the subjection, a bearded barbarian, a young man with a cake and a bald man. It will thus be seen that only two classes of figures appear

^{1 &}quot;Ηρως Αιετιο νος 'Γτισταθμος Αμφιπολίτεω ϊδητμαι μικρω μικρος ετι προθιρω λοξων όφιν και μοῖιον έχων ξιφος αιδρι ιττωι δημοθίες τέζον καμε ταρωκίσατο — A Hol Pal 1x 336

8

and profane, the former found only in the lararia, where they are clearly objects of worship, or in niches over the doors, in which case we may regard them as tutelary deities, the genre figures are the only ones used as ornaments, though their frequent presence in the lararia suggests that they were offered to the household deities, as in temples they were offered to the greater gods. Some at least were highly valued by their owners, for two skeletons were found in the streets, fugitives who had gathered up their treasures in haste, one, a man, clutched his money, his jewellery and a statuette, the other, a woman, was still holding a little female figure with a child in its arms

From the presence of these statuettes in Pompeian houses, we can argue that Greek houses also contained them, both as ornaments and as objects of worship, but we can draw no conclusion from them as to the subjects chosen Doubtless many were religious, like the Aphrodite dedicated by Chrysogona,1

> "Here heavenly Athrod to you survey, Style her celestral, and your offering pay This in the house of Amphicles is placed, Fair present of Chrysogona the chaste -Fra slated by FANKES

and probably there were fewer purely genre subjects, as the taste for realism is characteristic of the Roman age. At Pompeii we find none of the indefinite figures so common in the temples and tombs of earlier date, which form a link between religious and profane types, for instance, there are no graceful winged youths and maidens, whose place is taken by men and women in Roman costume, warriors and gladiators, the Seileni and grotesque nude figures of the sixth and fifth centuries are replaced by the caricatures of slaves, barbarians and actors which appear for the first time in the second century B c, and which at their first appearing are still associated with mythological subjects in which beauty of form is more sought after than a realistic and accurate representation of nature This difference of national temperament makes it impossible to base on

¹ Α Κυπρ ς ου παιδαμος ιλασκέο τον θέον είτων Οιρανίαι αγνας ανθεμα Υρυσογονας οίκω εν Αμφικλεοις ή και τεκνα και βιον έσχε EUVOV. UEL DE O'DEV AW OF ELS ETOS OF εκ σεθεν αρχομένοις $\tilde{\omega}$ ποτνια -A tl ol Pal vi 3+0

the contents of Pompeian houses, any theory as to the type of figure likely to be found in a Greek dwelling, though it is fair evidence of their presence there, but if any connection can be proved between the contents of Pompeian tombs and houses, we may reasonably assume a like connection between the contents of a Greek house and of the contemporary cemeteries. The inadequate records of early Pompeian excavations render this compurison somewhat difficult, but one Pompeian tomb contained a cameo vase of blue glass and eight terracotta statuettes, viz.—

A femile mask of hieratic type Two animals Mars. Mercury Two porters bearing buildens A gladiator

Replicas of the mask and the gladuator were found in two houses, palanquin bearers and a huckster, similar in style to the porters, in three houses, while the Mars, from its purely Roman treatment, may be compared with a group of Æners and Anchises found in the House of M. Gavius Rufus

The intimate connection b tween the contents of a Pompeian house and tomb being thus obvious it remains only to show that Greek tombs contain objects of somewhat similar character, in order to prove a like connection between their contents and those of Greek houses

It was by no means an invariable custom to place structures in the tombs MM Pottier and Reinach opened five thousand in a cemetery at Myrina in Asia Minor which dates from the end of the third century BC to the beginning of the first, and found that the percentage was as follows—forty seven contained nothing, nineteen contained figures and thirty three other miscellaneous objects MM Salzmann and Biliotti explored two hundred and eighty six tombs in a sixth-century cemetery at Cameiros in Rhodes, only a few were absolutely empty, fifty yielded figures and other objects, and the rest contained vases and articles of bronze and bone. Pages could be filled with an inventory of the contents of Greek tombs, but for purposes of comparison with the Pomperun one, three will suffice chosen at random from different places and different ages

There is a curious similarity between the contents of the four tombs, which range over a period of 600 years, the difference between the Greek and the Pompeian tombs (see page 9) is one of degree, not kind, the glass bottles of Cameiros correspond to the engraved blue glass vase of Pompen We have the same personal possessions, sea shell, golden ring, mirror and cameo vase, and in each case a collection of terracotta figures We saw how faithfully the contents of that one Pompeian tomb reflected the finds in Pompeian palaces, and therefore we may assume that had a Greek city met with the fate of Pompeu, we should find standing in its houses such things

as we now find in its tombs, and that among them would be not a

Returning to the study of the contents of the earlier Greek tombs, we find that all contain some objects made purposely for them, te the female bust from Cameiros, the gift clay buttons and tinsel jewellery from Eretria, and the weeping sirens from Myrina, but that in addition to these, all contain hieratic, genre and grotesque figures, and personal possessions such as fibula, so that the contents of a tomb and the contents of a temple also differed only in extent—in kind they were the same. They also show the same change in the terracottas offered

In the fifth and sixth centuries, they are almost without exception hieratic (Fig. 9) and grotesque (Fig. 11) in type and the explanation of their use and meaning is comparatively simple. They were intended as amulets to protect the dead from evil influences and there is no difficulty in giving a religious explanation of the figures, but after the end of the fifth century the hieratic types, i e the figures of the under world goddesses, the Seileni and nude crouching figures, gradually die out, and their place is taken by a multitude of graceful female figures (Fig 17) which in turn are succeeded by floating youths and maidens and figures from the Dionysiae cycle Caricatures of scenes from everyday life take the place of the grotesque figures, and it is no longer possible to find the funtest suggestion of religious motive in the greater number of the figures, though down to the latest period one figure in a tomb is usually of hieratic type, for instance, the female mask found in a tomb in Pompen (page 9)

During the list seven centuries, therefore, of the Pagin era, a change was gridually taking place in the relative proportions of the hieratic and the "profine figures placed in the tombs, until by the beginning of the first century be their positions were reversed, and the latter were in the majority. The earliest necropolis under discussion, that of Cameiros, contained many objects to which no religious meaning can possibly be attached strigils, nurrors sea-shells, swords, glass bottles, spindle-rings, tova vises, and two terrecotta reliefs dealing with mythological subjects, the carrying off of Kephalos

by Eos (Plate III), and the struggle of Peleus and Thetis The difference between the earlier and the later tombs is, that in the former the secular objects are generally not terracotta figures, but such objects as those enumerated above, while in the latter, in addition to such objects, which appear down to the Christian era, there is a large and jucreasing number of female figures of such indefinite type that they are known to Greek writers merely as " κοραι mudens (Fig. 16) This indefiniteness of type makes it impossible to account for their presence by the theory that they protect the dead, like the hieratic or grotesque amulet figures, but some light is thrown on the subject by Vitruvius, the Roman architect, who in describing the origin of the Corinthian capital, tells how a young girl died and how her nurse brought to the tomb "those things which in life she had most dearly loved and placed them in a basket there. I Numer ous passages in wills relate to the custom of burying personal possessions, for instance, a law case opens thus -A woman on her denth-bed made her will as follows "I desire to be buried as my husband wishes Everything I were on the day of my funeral is to be buried with me, and of my jewels the two strings of pearls and my bracelets set with emeralds Another testator says 3-" All my implements of the chase are to be buried with me, lances, swords, knives, nets, snires, ropes, decoys, cages my bath furniture, my palanquins, my correcte and my woven and embroidered robes

No special mention is made either of terricotta figures or of vases, which occur quite as frequently as the objects mentioned Panathenaic vases, the symbol of the proudest moment in a Greek's life, are usually found in tombs, so are the greater number of the beautiful red figured vases signed by artists of renown which were won in games of skill, and like the amphorae were buried with their possessors, but were certainly not made for that purpose. On the analogy of this custom it is likely that any very beautiful statuette (Plate VIII), especially if not of local manufacture, found in a grave, was the personal property of the deceased, and had served to adorn

¹ Post squituram e us qu'bus ea rigo irri delectabatur, natrix collecta et comporta m culatho pertul t'ad monumentum et summo conlocarit —Vitat in 1, 9

3 Hubber of \(\text{T} \) 1864, p 207

his house, but this would only account for a small number. Besides these very choice figures there are others of similar type which are found in great numbers They cannot all have adorned the houses, because one tomb often contains several replicas of the same figure. and at Myrina one had nothing in it but ten pairs of wings, so that they must be offerings from the friends of the deceased, not an offering in the sense that offerings were made to divinities to appearse them, but a last tribute of respect, like the flowers sent now a days There was no religious meaning attached to them any more than to the fibulæ, the jewellery and the vases, and it must be horne in mind that we have no proof that even these were always the personal property of the deceased, they may have been offerings from friends

We therefore learn that all terracotta figures can be divided into two classes, those which occupy the position in which they are found in virtue of a definite meaning attached to them, and those which derive a meaning from the accident of the position in which the will of the purchaser placed them. These latter first attain importance in the fourth century BC, but they existed from the earliest times, in the shape of vases in human or animal form (Fig. 11) This class provided the bulk of the offerings to divinities and the presents to the dead, their variations of type, style and technique are the natural consequences of fluctuations of taste, both local and national, from the indefinite "maidens of fourth-century type we pass to floating figures and groups to which the taste of the age give mythological names and attributes (Figs 4 and 5), and through this stage to the intensely realistic types which first appear in the comic figures and ultimately reign supreme. The variety of types all used for one purpose, is in itself sufficient to show that no deepsented meaning can be attached to them. They had three recommendations they were cheap, and so within the reach of all, they offered no temptation to tomb-robbers, and they were pretty and pleasant to look at and good to live with, but they had no mean ing until the purchaser had decided on their destination, and, certain "funereal types apart, the same figures served to decorate Greak temples, Greek tombs and Greek houses

CHAPTLR II

METHODS OF MANUFACTURE

 $^{\rm tr}$ For they (the image-makers) use a mould, and whatsoever clay they put into the comes out in shape like the mould.

και γιρ εκειιοι (οι κ ροπλαθοι) τιτον τινα ταρεχοντες στο ον αν πηλον ες τουτον εμβαλο σιν δμοιον τῶ τιπω το είδος αποτελοισιν —Dio Chrys Or Ix 25

THE terracotta statuettes afford convincing proof of the high artistic level of popular taste in Greece Their makers, the Koroplastæ,1 to give them their Greek name, occupied no distinguished position in the hierarchy of art, they were its humblest servants, and neither received nor claimed the name of artists, but neither were they mere craftsmen and their work only the product of generations of inherited mechanical skill, for it shows that sense of beauty of form which was the birthright of every Greek, and which he absorbed as insensibly as the air he breathed. The potter was not an artist whose creations appealed only to the select few, his cheap reproductions were for the many, his one aim to hit the public taste, therefore the terracottas are the surest evidence of what this taste really was Anv large collection of Greek statuettes contains some figures that are rough, some that are careless, some that offend our notions of decency, but none that are in bad artistic taste, the conception is always large, the lines harmonious They are in very truth statuettes, statues in little, and retain the breadth and grandeur of conception of the great works by which they were inspired

Our admiration for these statuettes is only increased by a knowledge of the simple methods used in their production. There were two ways of making them, modelling by hand and casting from a mould, the former process is the more ancient, and in later times was used only for

 $^{^1}$ Ηαργοςα 114, 27 κοροπλαθός τους εκ πηλου τλαιτούτας κορας ή κορους ούτως ωνομαζον

very small, rough figures, made by giving a pinch here and there to a bit of clay until it assumed the rough form of a human being or of an animal. Some of these little figures (Figs. 1 and 3) are wonderfully spirited and true to nature, but the earliest human figures found are

simply slabs of clay with a triangular lump at the top for a head and two fin-like appendages for arms, seated figures were made by bending the clay and placing a support beneath it, standing ones by thickening it at the base, so as to form a cone or wedge The first improvement effected is to stamp a face on the upper part of the clay and to round off the top roughly in the form of a head, the next, to use a stamp for the whole of the front of the figure, and we thus have a solid lump of clay with the figure embossed on it When the margin was cut away it presented a superficial likeness to some of the early moulded figures, but there is always this difference, that in the one case the clay is put into the muuld, and in the other the stamp is pressed upon it

Central Museum Athen from Bretma.

The practice of moulding figures instead of stamping them doubtless arose from the difficulty of firing a solid lump of clay without varping it. Many of the moulds used in the manufacture of statuettes have been found, this one from Turentum (Fig. 6) represents the upper part of a draped female figure with her hands clasped above her head. A mould necessially presupposes the existence of an original figure which must have been in the first instance modelled by hand, but of these models nothing is said by classical authors. Pliny indeed mentions that the little clay models (proplasmita) of the sculptor Pasiteles fetched high prices among amateurs of art, and quotes a stying of his to the effect that "modelling in clay was the purent art of chasing, carving and sculpture, but the extreme cheapness of the Greek statuettes and the absolute impossibility of "patenting a novelty, would put sculptors' models out of the reach of the koroplast, and those he employed were probably made by a rather superior class of artificer. Now-a-days such

models are built up on a wooden substructure which burns away in the firing, leaving the figure hollow, and probably the same method was used in classical times. The mould was made of clay biked very hard, and into it the workman carefully pressed a thin layer of fine moist clay, and others until the requisite thickness was obtained, the mould was then set to dry, and the shrinkage produced by evaporation soon allowed of the cast being removed from it

For the commonest class of figures a mould is used for the front only, and the back is formed by a convex mass of clay cemented to the front so as to form with it a rough calinder for the backs of a better class of statuette there was a second mould, giving the general outline, and sometimes sufficient sketchy detail to complete the main features of the front, and the two casts are carefully joined with a little liquid clay. There are a small number of statuettes in which the back is modelled as carefully as the front, but these are imitations of bronzes, and comparatively rare (Plate VI)

Statuettes in which only one mould is used for the whole length of the figure are necessarily somewhat stiff and constrained in pose, and are treated rather as if they were reliefs than figures in the round, the head is joined to the shoulders either oy the head dress or the hair, and portions of the background are left wherever their absence would endanger the safety of the cast, the result is an impression of hieratic stiffness and rigidity, and for that reason this, the earliest method, was retained down to the latest times in making statuettes for temple offerings

Many more moulds and a more complicated method of procedure are required for most of the later figures, t e for those which appear in and after the fourth century B c. for instance, a dancing girl (Fig 31) required thirteen, three for the head and cap, two for the body from neck to knee, and two for each arm and leg, the draped lady shown in Fig 17 five in all, two for the head, back and front, two for the draped figure, and one for the fan All the parts were cast separately, then very carefully fitted into one another and cemented with liquid clay, all roughnesses removed and the whole set to dry

It would be a mistake to suppose that because a Greek koroplast used thirteen moulds for one particular figure, he required a vast assortment of them to pursue his trade. Nothing is more characteristic of Greek art than its extreme economy of method, the sculptor, instead of inventing new types, developed and modified old ones, the koroplast, his humble follower, made half a dozen different figures out of the judicious combination of a few moulds, and that is the reason why the heads and arms are frequently too big or too small for the bodies to which they are attached

A careful study of any large collection of figures from Boeotia, Asia Minor or Italy shows that though there is a strong family likeness between those from one locality there are hardly ever two which are exactly alike, because by selection and combination of different moulds the potter was able to produce an infinite number of variations. The two accompanying figures are a striking example of the manner in which these variations were obtained (Figs 4, 5), the same mould has been used in each case for the body, but the addition of different heads, wings, arms and attributes has changed not merely the type but the pose of the figures

Sometimes these more or less haphazard combinations are not very happy, but as a rule they are, thanks to the sense of beauty of form which was, so to speak, in the air, and it is on the artistic feeling with which the Greek potter combined his moulds that he rests his claim to be something more than a mere criftsman

After the statuette had been put together and before it was fired, it was subjected to a very delicate and skilful process of retouching, the workman went over the whole surface with a graver, sharpening outlines, smoothing roughnesses, intensifying details of feature, head dress and drapery, and giving to the whole that aspect of individuality which is the great charm of the Bosotian statuettes from the Tanagra district, and which is so characteristic of them that any specially pretty figure, whatever its provenance, is popularly known as a "Tanagra The value of this retouching process is shown by two figures from the same mould, representing Eros burning a butterfly (Psyche), in the one (Fig. 7) the details are barely distinguishable, and the whole is heavy and lifeless, while in the other (Fig. 8) after

retouching, they are clear, and the whole scene is instinct with life and grace 1 —

"Oh, love, be kinder, or some day,
Alghing with thy cruel torch,
Again my singed soul to scorch,
Thou wilt not find her She too has wings to fly away

Trailate! by W. R. Paron

The retouching process was not unaccompanied by risk and of course added to the cost of a figure, so that numbers even of the statuettes from the Tanagra district have not undergone it, and the vast majority of statuettes found in other places are left just as they came from the mould

To avoid risk the figures were fired at a very low temperature, and for the same reason a hole was cut in the back to facilitate evaporation, it varies in shape, size and position according to the district in which the figure was made, and is entirely absent in some figures which are imitations of bronze statuettes (Plate VI) After the firing the accessories were stuck on these, fans, hats, wreaths, birds etc, were made and fired separately and added at the caprice of the potter The whole figure was next costed with a white lime-wash, the object being to make a medium for the final decoration in colour Unfortunately this lime wash peels off and brings the colour with it, so that we do not often find a statuette in which the original tints are well preserved, but enough remains to show that the scheme of colour was a brilliant one in which red and blue predominated, is might be inferred from the words of a Greek, who in advising his friend to cultivate solid learning says," "otherwise you will be like potter's work, all blue and red outside, and all clay and rubbish Common figures are roughly coloured, but the finer ones are decorated with care, red brown being used for the hair, red for the lips, rose pink for flesh tints, pink and blue for masses of drapery, green for borders and patterns, and yellow or gold for trinkets

In every district where these statuettes were made, and it would

¹ Την π ρι νηχομενην ψυχην α πολλακι κα ης

be difficult to find one from which they are entirely absent, the same methods of manufacture were pursued, but almost every centre of production has certain local peculiarities of make and a predilection for certain classes of figures (Chapter IV) By a very careful study of the 10ugh figures excavated in any one locality we can determine the local types or type, because such rough figures are made on the spot, and it is not unreasonable to consider that finer statuettes of like type are likewise local work. As the result of such comparisons we are now in possession of a certain number of types of which we can speak unhesitatingly as Boeotian, Atric, Corinthian, etc., but it must be borne in mind that from all the most famous centres of production there was a regular export trade in moulds and statuettes, and that given the mould and skill in retouching, there was nothing to prevent a potter in Asia Millor from reproducing a Bæotian figure, local peculiarities and all, and in some cases it is impossible for even the most experienced eye to distinguish between the two unless there happens to be some unmistakable peculiarity in the clav used for the copy

It might be supposed that in such cases the texture of the clay would be a sure guide as to provenance, but this is not the case, excavation only reveals the character of the local clay or clays under normal conditions of firing. We can therefore discriminate between local and imported figures in any one district and determine the characteristics to be expected in the normal figures of a given place, but these hold good only for average figures. A fine specimen is usually better fired, and then the local characteristics so far disappear that they can only be detected by chemical analysis, and there are obvious difficulties in the way of applying such a test to a fine statuette

The Greek laws respecting excuvations are unfortunately so framed as to put every obstacle in the way of bona-fide excavators and to encourage clandestine operations, and therefore most of the fine genuine statuettes which come into the market are the result of the latter, the finder has every reason to conceal the real locality of his trontaille, and his statements on the subject need not be taken seriously unless confirmed by the presence of a number of minute details of style and technique which can only be learnt by the constant handling and study of genuine examples

The question of provenance is, however, one which chiefly concerns the archaeologist, for imbility to assign a Greek statuette to its proper provenance, to distinguish a figure from Asia Minor from one from Bootin or Africa, does not affect our enjoyment of its artistic charm, we may even derive legitimate artistic satisfaction from one class of the forged statuettes These, roughly speaking full into two groups, modern casts from ancient moulds and figures, and modern casts from modern moulds. Nothing can be simpler than to reproduce the ancient methods of cisting, retouching, firing, and punting, and though the figures thus obtained are usually too heavy, too fresh and clean, too drintily printed, too artistically damaged, to deceive a practised eye and touch they are at least of authentic Greek type they have the beauty of outline and large simplicity of design which is found in Greek work, and the forger's offence is a sin against morality, not against art. It is not, however, this class of forgery which usually tempts the non-expert, and his mistakes are due to ignorance of the precise nature of the charm of Greek art, and notably of its simplicity, for the forger does not content himself with copying, he invents and fathers on the ancient world, types which are the outcome of modern ways of looking at classical models Modern artistic taste, even when good, is the "heir of ill the ages,' a currously complicated product, enriched with the accretions of two thousand years and the spoils of many nations, it cannot look at the beautiful from the simple Greek standpoint. Therefore the forger produces a figure which sins against every canon of Greek art, but which appeals to even cultivated modern taste, for many, judged by modern standards, are quite charming, only they are not Greek, and to an eye trained in the severe school of Greek art, they are not merely ridiculous, they are a crime against that art

For this reason much bitterness has been imported into recent discussions of the question, the possessors of such figures feel that their treasures are beautiful, and cannot understand why archeologists, usually, in their opinion, persons of no pretensions to taste, should at a glance relegate them to "a class of antiquities which no museum cares to possess"

CHAPTER III

ARCHAIC STATUETTES

"Desj se me, Mercury, because I m only clay!

THE statuettes dealt with in the present chapter are those archae figures which in the sixth and fifth centuries were used as temple offerings, and placed in the tombs to protect the dead from evil influences

The study of any large and representative collection of these archaic statuettes shows that it contains little beside hieratic types, i e figures of feminine divinities and grotesque mile figures, further examination shows that the same fundamental idea underlies all the figures of feminine divinities, that precisely similar figures are to be found in places which we separated from each a her by the whole largth of the Mediterranean Sea, and that two types of figure predominate to the practical exclusion of all others,-a seated woman dressed in a long robe, with a veil filling over her shoulders from her high head-dress, her feet resting on a footstool, her hands lying stiffly in her lap (I ig 9), and a standing one, with one foot advanced, one hand pressed to her bosom, the other drawing aside the skirt of the long tunic over which she wears a currously pleated little mantle (Plate II), the faces of both figures are somewhat full and fleshy, their eyes are oblique and their mouths are distorted by a fixed smile. The curiosity aroused by the universal diffusion of these two types of statuerte, which are obviously

Lydians and from the Phenicians, who though driven out of the Ægean Sea by Greek enterprise had a large trade with them and a basis of operations in Cyprus, where they had munitained the supremacy which at a very early period they had established over the indigenous Greek population. The geographical position of Phenicia at the easternmost end of the Mediterrinean Sea between Egypt and Assyria, made her the natural channel of communication between the oriental and the Greek world, so that we are not surprised to find that a large portion of the Phenician merchants triding material consisted of copies of the minor productions of Egyptian and Assyrian art

The Phenician workers in metal were famous, and their beautiful engraved bronze bowls and carved ivory figures teach us both the manner and the matter of the national art, this was necessarily oriental in character because it grew up under the shadow of oriental art, but when we examine its designs we find that they consist in a skilful juxtaposition of Egyptian and Assyrian "motives ingeniously combined to form a decorative whole, but not fused into a new and original form, it is purely imitative, an artistic industry not an art by turns Egyptian and Assyrian in form, and even Greek when this force had pushed its way to the front, and a curious statuette which comes from a Phenician workshop in Cyprus well represents this admixture of styles (Plate II) It shows a draped female figure in the pose of the ushabtiu or "inswerers of Egyptian funeral ritual and belongs to a period when Greek potters were still making formless crescents and cylinders to represent human figures Technically it is a fine specimen, modelled by hand retouched, carefully painted and well fired, but artistically it shows a most disconcerting mixture of styles the face and pose are Fgyptian, so is the attempt at showing the modelling of the body, the turban and long straight robe are Assyrian, and so is the triple necklace, though it is made of lotus buds It is therefore a fair specimen of the figures which Phenician art made for the Greek market, and shows how incapible it was of presenting to a nation ignorant of oriental art, such a view of the larger monuments as would enable it to form any just idea of their style and technique, and to apply these to its own statues What it did was to introduce its minor productions to the Greek, and so to

provide him with a series of fantastic forms—gryphons, human headed birds, winged lions, grotesque dwarfs etc., with which he clothed his own vague conceptions of the spirits of earth, air and sea, whose power for evil was ever present to his mind. These forms he used to decorate his pottery, but they were useless to him in the composition of a statue, and therefore Lgyptian art, which was known to the early Greek only through a Phenician medium, had little influence on the development of his archie sculpture, until long after its main features had been determined by other forces.

With Assyrian sculpture, on the other hand, the Greek came into contact also through the kingdom of Lydin, with which from a very early period Ionia had had friendly relations. All that we know of Lydian art shows that it was strongly Assyrian in character, and it was therefore through it that the Greek artist derived his first and strongest impressions of the style and technique of Assyrian sculpture, with its wealth of decorative detail, its technical finish and its hidebound conventionality of subject and style

The material with which this oriental element was to combine was twofold, the remains of the civilization known as "Mycenæan,' and the productions of an art of which we find trices in all the early necropoles of the Ægean islands. One of the main features of "Mycenæan art is its earnest and careful study of nature, a feature which we also find, though in a much more primitive form, in the art of the Greek race indigenous to the Ægean islands, for specimens of which we must have recourse to terricotta statuettes.

At Troy, in the earliest Cypriote graves, in the præ-Phenician settlement at Ialysos in Rhodes, and in many other places, we find formless little idols made by flattening out a piece of clay, pinching it in at the neck, moulding a knob on the top with a point for a nose and a gash for a mouth, and adding two fins for arms (see cut on p 15). This is the primordial statuette, whenever the potter is thrown on his own resources for a rendering of the human figure he produces it, and it is interesting because the sculptor in making a statue of a divinity proceeded in just the same way. The Greek gods, unlike all the Assyrin and many of the Egyptian, were always anthropomorphic, but though the Greeks imagined their divinities

full, rounded features, showing stronger oriental influence, were the especial achievement of the Ionian cities whose position brought them more immediately into contact with it. Owing to ritual reasons the potters copied only the feminine types, and it is these which appear in the two statuettes from Cameiros in Rhodes, which are represented in Fig. 9 and Plate II.

The type of the sented figure appears in sculpture in the sixth century, in the statues of the Branchidæ family from the Sacred Way to the temple of Apollo at Miletus, 1 but the statuette differs from them in sex, and in wearing the high head dress which belonged to divinities. The collection of Rhodiun statuettes in the British Museum, which is of unrivalled completeness and extent, contains no less than six variations of the type, showing its gradual modification until it ends in the figure which was the supreme effort of the Rhodiun potter towards the end of the fifth century (Fig. 10). The high head dress has gone, the Ionic tunic and veil are replaced by the Doric dress, with its folds and drapery carefully worked out, the disproportionately long arms are shortened, and the hands now lie idly in the lap, the face has lost its fixed smile, and has assumed rather a pensive expression, while the whole figure retains only just so much archaism as is necessary to establish its connection with its prototype

We can also trace the standing type through all its different phises, amongst which the figure on Plate II occupies a middle position. The ingular lines of the lower part of the statuette, the stiff position of the left foot, the timid rendering of the transverse folds, recall the time when the sculptor was still struggling to disengage his figure from a block of wood or marble, and the figure has a curious reminiscence of the tree origin of the statue in the way in which the drapery spreads out at the feet like the roots of a tree, the latest member of the series corresponds to the seried lady in type of face, dress and the rather studied elegance with which she holds out the folds of her drapery

These are, however, only artistic modifications introduced into types whose integral form was fixed by the end of the sixth century, and which down to the end of the fifth represent a feminine divinity whose presence in the tomb was due to a desire to protect the dead from evil

¹ British Museum, Archaic Room Nos 7-16

influences, but who at this period had neither a special name, nor any very definite functions

Deep sented in the mind of every primitive people there is an in stinctive idea of the Earth-mother, the principle of fertility, the type of continual birth and death, and therefore when they wish to express this idea in a concrete form, they choose a woman for their type The Assyrians called her Astarte, and represented the reproductive powers of the earth by a coarsely symbolical nude figure, the Greeks chose for this purpose the draped type which was the conventional rendering for a female figure, and indicated her godhead by adding the high head-dress reserved for divinities, but neither Greek nor Assyran would have any difficulty in recognizing their own gods under another form, for the beliefs of polytheism are too vague and indefinite to be crystallized into a shape which would exclude all representations of a divinity but one. Thus the cultus image of Athene worshipped at Lindos in Rhodes was a Phenician idol, in whom the Greeks recognized some truts of their own goddess, and therefore when they expelled the Phenicians from the island they muntained the worship of their divinity under the name of Athene Telchinia

This vigueness of thought is reflected in the statuettes which when found in tombs have a natural reference to the underworld character of the goddess mother and her power of protection there, as in the upper world, therefore in time they are connected with the goddess Demeter, who as the Larth mother had always such functions, but who became more particularly the underworld goddess, when the legend of the rape of Persephone and her sway among the dead as the bride of Hades had been shaped into words. In time the two goddesses ousted all other divinities from the underworld cycle, and endowed with their own personality not only the feminine statuettes, but also the female masks (oscilla) which were hung on the walls of the tombs (Fig 12) In their origin these are derived from the Egyptim coffins, the upper part of which is moulded in the likeness of the head and shoulders of the dead The Greeks, misled by their beardless faces, and knowing them only in rough Phenician copies, turned them into female busts, and adapted them to the representation of a veiled goddess, while in time their truncated form, which gave

them the appearance of rising from the earth, connected them with the Persephone myth They vary in height from three inches to two feet, and show every stage of archaic art

The preponderance of femule figures among the archaic statuettes is directly due to the fact that the underworld divinities were feminine, the small number of types is due to the indefiniteness of idea underlying the conception of these divinities, for there was no necessity to differentiate the figures when the personality was so vague. The standing and the seated figures have no necessary difference of meaning, the standing type is usually, from its elegance, connected with the name of Aphrodite, but at the period at which it was evolved, Aphrodite is only another name for the Earth mother's reproductive power, of which the young leveret in the hands of our statuette is a sign (Plate II.)

Side by side with the archaic feminine figures we find masculine ones of an entirely different character, but fulfilling the same protective duties The Greeks were deeply impressed with the idea that only the good could be beautiful, so though they imagined the under world divinities in human form, they clothed the underworld spirits, who were malignant in character, in the grotesque shape of those oriental figures with which Phenician art had made them familiar The two commonest types are those of a nude, beardless, crouching figure, which is derived from the Egyptian god B s (Fig. 11), and a bearded one, based on Seilenos, an Assyrian hunter-demon Egyptian ritual, statuettes of Bes were a symbol of joy, and were thus often used to form little perfume bottles, so that our Greek statuette has had a vase mouth placed on it, in imitation of the original model, though there is no corresponding hole in the figure. The beardless type is particularly common in Rhodian tombs but in Greece proper the bearded Seilenos is the favourite amulet and appears in the slightly modified form of an elderly man with shaggy hair and beard and in Italy it takes the form of a little satyr mask (Plate IV) Its popularity led to the Seilenos being included in the train of the god Dionysos when the latter assumed an underworld character through his mystic connection with Demeter and Persephone, but his individuality was then merged in that of the satyr, and regaining his

woodland character he lost his protective one, so that in the fifth century the grotesque figures disappear almost entirely from the tombs and leave the field to the feminine types. A modification had in the meantime taken place in the shape in which the latter appear, but it was purely artistic and did not affect their meaning, and was the consequence of the great manifestation of energy in art, as in every other way of life which followed the Persian wars

At the beginning of the fifth century 1 change took place in the Greek world, during the sixth the centre of the world had shifted westward across the Ægean Sea to the towns of continental Greece, Corinth, Argos, Sikyon and Athens, whose wealthy rulers attracted to their courts all that was most brilliant and talented in the Greek world. With the defeat of the Persians, Athens, which had taken the lead in the national defence, leaped at once into the foremost place. She had suffered most at the hands of the foe, her city was destroyed and had to be rebuilt, hence it was to Athens that the sculptors and artists of the day flocked, and there grew up there a school of taste which for the next fifty years set the artistic tone for the rest of the Helleinc world.

Its influence is shown in the fifth century statuettes which, from whatever part of the Greek world they come, from Athens (Plate III), Rhodes (Fig 10), or Cyprus (Fig 13), all have the grandeur of conception, the nobility of design and purity of outline which we find in the sculpture of the time, they have lost whatever air of stiffness their hieratic character gave them, and in its place they display a certain dignity and reserve which makes the graceful abandon of the figures of the next century look slightly vulgar Part of the additional charm of the fifth century figure is certainly due to a change in dress from the Ionian tunic (Plate II) to the Dorian (Fig. 16), a change which was one of the consequences of the Persian wars How far or for how long patriotic feeling led the women to make the change in private life, we do not know, for in the fourth century they had reverted to the Ionian tunic (Fig 21), but sculptors clothed their figures in the Dorian garment, whose heavy drapery with its perpendicular and transverse folds afforded charming effects of light and shade

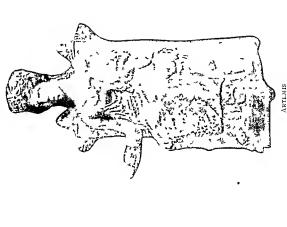

We have good examples of the modification which the seated goddess figure underwent in two statuettes, one from Athens (Plate III), and one

from Cyprus (Fig 13), both of which show the more elaborate and or style of the period

Incidentally both bear witness to the greater precision of though the age, for though they differ only in the position of the left arm, slight difference suffices to show that the one (Plate III) is Artemis, other (Fig. 13), Aphrodite

The potter has been constrained by hieratic conventions to seat Artemis on a high throne with her feet on a footstool, to place a l coronet on her head, and to tuck her symbol, a fawn, in a very unc fortable position under her left arm, but satisfied that these concess allow of no doubt that the figure is not only a goddess, but the god Artemis, he has rendered her long tresses and full, soft hair in a free st he has painted her coronet with honey-suckle pattern, and has lavishe wealth of decoration on her throne and footstool The same elaborate of detail is seen in the Aphrodite (Fig. 13), which comes from Cypriote, town of Kittion (Larnaca), a centre which produced so charming figures when, as in this case, it was inspired by Athenian ty but was not so successful in its unaided efforts The potter has indic. the divinity of his figure by the same adherence to the convention attitude and accessories, but the high head-dress is covered v ornament, the legs of the throne are in the form of sphinxes, and e the outstretched dish is elaborately embossed, the coquettish aci with which the goddess holds her shawl together beneath her a identifies her with Aphrodite, the chief goddess on the island, for a str of her in precisely the same attitude is shown on a coin of Nagidos Cilicia 1 The novelty in this figure is the coquettish treatment of drapery, and a comparison with any of the fourth-century genre ty shows how slight the barrier was between the two Religious c servatism led to the preservation of existing archaic hieratic types, wl were made down to the end of the Pagan era, but no new ones w invented after the fifth century, and as a class they decline rapidly number and importance, giving place to other feminine figures wh indefiniteness is so complete that they are known to Greek writers c as "maidens' With these appear in ever-increasing number myt logical figures and figures drawn from real life

I Journal of Hellense Studies, vol xiv Pt I P 164

1 OS CARRYING OFF KELITATOS

It must not, however, be supposed that in the archaic period the potter busied himself exclusively with hieratic figures. A series of archaic rehefs of very delicate sixth century workmanship, which from their fragile character must have been made to decorate some solid object like a box, deal entirely with subjects driwn from legend or from real life. One of these represents the goddess Eôs (the Dawn) carrying off Kephalos (Plate III), a beautiful shepherd youth with whom she fell in love as he was hunting at break of day on Mount Hymettus. The artist's power of design is hardly on a level with his technical skill, and the group shows a curious archaic convention, by which the human figure is represented as very much smaller than the divine one, but the truth of rendering in the wind-blown drapery and hurrying figure shows that the picture is based on a direct study of nature, just as much as the other reliefs of the series which depict is ch scenes from real life as a man and woman conversing (British Museum, B 317)

Besides these reliefs there are a number of small vases in statuette form, the subjects of which are drawn from real life and depict male and female busts, mythological persons and animals, while one whole series from Athens is in the form of a foot in its sandalled shoe. In addition to these vases and reliefs, the potter made dolls (Fig. 2) and toys (Plate IV and Fig. 1) for the children, and there are many little groups representing scenes from real life, such as a woman cooking (Fig. 3), all roughly but eleverly modelled and wonderfully true to nature the suggestion of effort with which this little woman rolls out her paste is very well given, and her paste board and rolling-pin might be the basis of a dissertation on ancient kitchen utensifs

It will thus be seen that there was always a non-hieratic side to the potter swork based on the direct study of nature, as opposed to the hieratic side based on a conventional rendering of it, but the distinction between the two was very clearly made until the end of the sixth century. During the fifth the barrier was partially broken down by the introduction of greater grace and beauty into the hieratic types, it was the final elimination of the conventional element, the application to all figures of the principles derived from the direct study of life which produced the graceful women, the charming youths and pretty children of the fourth century

CHAPTER IV

DEVELOPMENT OF THE GENRE STATUETTE

"How oft does taste
Aiming too high, its toilsome efforts waste"

"Quibus addere plura
Dum cupit, ah, quotiens perdidit auctor opus"—Martial, XIV 115

The modifications of form introduced into the hieratic statuettes by the influence of Attic art did not affect their meaning as long as they retained any vestige, however slight, of their hieratic character, but were in a great measure responsible for their disappearance. In the gradual process of humanizing which continued throughout the fifth century, the divinities lost the conventional attributes of their godhead, and it was expressed by superhuman beauty, grace, and dignity rather than by outward symbols. To represent this distinction between the divine and the human, to treat a human model in such a way as to turn it into a divinity, requires the talent of a great artist, it is beyond the powers of a potter, and therefore his femining divinities, when they become heautiful women in outward appearance, become women in nature; they merge the goddess in the woman and forget that they ever had any hieratic meaning or function.

As the potter drew more and more of his inspiration from the direct study of real life he was able to widen his horizon, and henceforth his productions are not entirely confined to feminine figures, though these still predominate, male figures appear and figures drawn from legend, and there are even imitations of celebrated statues. His studies from life, however, fall into two clearly marked divisions, the realistic presentment of the individual and the idealistic presentment of the type.

realistic deals with those figures which are concerned with the material or commonplace side of life, cooks, nurses, old men and women, the idealistic on the other hand deals with its cultivated and charming side, and its figures are chosen for their beauty, youth and grace. In the fourth and third centuries, while Greece still held sway in the world of art, these latter maintained their position in the potter's world, but with the decline of Greece, when the centre of civilization passed to the Hellenistic courts of the semi-oriental rulers of Asia Minor and Egypt, the realistic figures acquire a gradually increasing importance and finally oust the idealized types, as these had ousted the hieratic

The figures with which we have now to deal mark the highest point which the potter reached, and then his gradual falling away from his own high standard of excellence. In the fourth century he attained to such technical and artistic perfection as his miterial allowed, and then partly owing to a change of taste, partly to the decay of material prosperity in Greece, his craft died out, and by the end of the third century was practically extinct there

At the close of the fifth century Athens, in spite of her political misfortunes, is still the centre of artistic influence, and we see in the Athenian statuettes of this period a decided tendency to the adoption of sculptural types, not based on the direct imitation of particular statues, but inspired by the general influence of the many beautiful works of art contained there In point of type the earliest is the standing maiden (Fig 16),1 whose attitude with the whole weight falling on one leg recalls that of the Carvatids of the Erechtheion, though the position of the arms is different, and our figure seems to be lifting them above her head as if to place a burden on it potter has carefully worked out and retouched all the details of his figure so as to give full effect to the soft, thick hair, the delicatelyrounded features, the contrasting folds of the fine under dress and the thick robe over it, and even the elaborate necklace, and has thus produced a composition which gives a perfect idea of the combination of delicacy of finish and largeness of conception of Attic art A figure of Athene (Fig 14) presents it to us under another form, as inter-

 $^{^1}$ Th s figure is in the possession of Cecil H Smith, Esq $\,$ to whom I am indebted for permission to publish it.

preted in a foreign workshop, which has deprived it of its technical perfection, but has not been able to obscure the noble idea which underlies the composition. The figure is a Cypriote cast from an Athenian mould and is a very rough and clumsy production, but this roughness and clumsiness cannot hide the dignified simplicity of the whole and the skill with which the qualities of a statue have been transmitted to a statuette. We see before is the goddess to whom the Athenians prayed,

"Pallas Athena, mighty protectress, Sheld us from storm and stress, Guard thou this folk and state From civic strife and ferce debate Thou and thy sire, thy servants save From doom of an untimely grave

Travilated by J H MERIVALE

A certain amount of interest attaches to the copy, because the goddess'holds her helmet in her hand, and it is suggested this was the attitude of the celebrated Athene Lemma of Pheidias, a statue so fur that when a Greek art critic was composing a figure "compact of every statue's best," he took the oval of her face and her grace of expression for his "beauty"

The technical skill of the Athenian potter is shown by the nude youth on Plate VI, and the dainty grace which he imparted to his less ambitious productions by a figure of a school-boy (Plate IV), and by two little toys, one a boy riding on a swin (*Ibid*), and the other a man on a mule (*Ibid*)

In the middle of the fourth century the centre of interest shifts from Athens further north to the district which lies between the island of Eubera and the Corinthian Gulf, and which comprises Eretria, Aulis, the cities of Boeotia and of the Opuntian Locri During the whole of the fifth century Boeotia was under a cloud owing to its unpatriotic conduct during the Persian wars, and in

BOY WITH KNICKLEBONLS

addition to this, Attic wit fastened on its inhabitants a reputation for clumsiness, stupidity and general coarseness of appetite. Nothing that we know of Boeotia justifies this reputation, for Pindar was a Boeotian, and so were the celebrated poetesses Corinna and Myrinna, who were his contemporaries, while the Bœotian fourth-century statuettes reveal a delicate fancy which we should imagine could hardly have emanated from an uncultivated people, or have proved acceptable to them As the political power of Athens waned, Boeotia gained in consideration, for the cities of Greece were all gradually included in the Macedonian kingdom, and none could triumph over the others when all were conquered

It is just at this period, in the middle of the fourth century, that the statuettes from Bocotia assume the place of honour which had so far belonged to Athens This district had always been a centre of vase production, and has yielded every variety of statuette both of archaic and of transition type The latter are all rather heavy and massive in form, distinguished by high bases and crowns, both moulded in one with the figure, and by an unusual predominance of male figures It is, however, rather difficult to distinguish the pro ductions of one district from those of another, owing to the general similarity of the clay used and the constant interchange of moulds among the different workshops In the latter part of the fourth century, when the so called Tanagra figures acquired such a vogue as to practically monopolize the market for a time, these causes lead to a still greater similarity in the productions of the different districts, and therefore Bœotian types are usually named after the district in which they first appear in any quantity The name of "Tanagra" has thus been bestowed on a whole series of idealized studies from real life representing youths, maidens and children in every day costume, engaged in their every day pursuits, which were first discovered in the graves there

Tanagra is the centre of a district which, even in the second century A D, was still "a land of potters," and there is no a priori improbability in the type having first originated there, though it soon spread not only to all the other workshops in Boeotia, but in Greece, and was extensively copied in Africa and Asia Minor The phase of art which these figures represent is that which in sculpture is chiefly associated with the name of Praxiteles He chose by preference for his statues those subjects in which beauty and grace were the leading features, and while drawing his inspiration from the living model, yet by the selection of its most general and expressive features, produced from it an abstract type which was perfectly true to nature but more beautiful than any concrete figure The idealized human types thus created served admirably for figures of the younger gods, Aphrodite, Eros, Apollo and Dionysos, and the Boeotian potter used them to depict the graceful women (Fig 31), the athletes who "radiant with youth like living statues lounge, decking the streets (Fig 28), the pretty children (Plate IV) who passed daily before his eyes, and he was so charmed with his human models that even when he wished to represent the denizens of the air, the graceful attendant spirits who play so large a part in Greek imagery (Chapter VII), he drew them as semi-nude maidens (Plate VIII) and as winged children (Plate V), differing only in their nudity and their wings from the maidens and children of every day life

Part of the attraction of these figures lies in their human interest, but part is due to the perfection of their technique and the care and skill with which they were retouched, so that the details are rarely snudged or blurred as in most of the earlier figures (see Chapter II) Their greater freedom of gesture and of pose, owing to the employment of several moulds, which allowed the potter to represent more complicated attitudes, is also part of their charm. Their only fault is that they are rather monotonous, because they represent a type, not an individual, but that is the fault of the period, not of the potter.

In his treatment of his favourite types there is no brusque breaking away from past traditions but only a modification of them, in accordance with the spirit of the age, his athleres save in the greater freedom of their attitude, differ very little from the youthful male figures of Locii or Thebes, whose slightly hieratic attitude obliges us to call them Hernies or Ganymede instead of Konnaros or Philochares, it requires only a very little modification to transform the figure of a seated goddess, shrouded in her mantle, with her hand muffled in the

folds of her drupery (Fig 13), into a Tanagra lady gracefully wrapped up in her shawl and holding its folds together coquettishly (Fig 20), deprived of her hieratic accessories, her throne, her high head dress and her sacrificial bowl, with a pointed hat on her head and a fan in her hand, the goddess would differ little from the woman

Imitations of Tanagra types occupied a large place in the stock of other centres of production, and it is interesting to compare these with their models. The winged children of Tanagra, the little Erotes (Plate V) who dance along on tip-toe, are among the most graceful and original of their productions, and the prototypes of all the floating figures so common in later workshops (Plate VII). With these we may compare another child. Eros from Ægina, muffled in a cloak with a large wreath on his head, and wielding an enormous feather fan of oriental type, quite different from the ordinary ivy-leaf fan of Tanagra figures (Plate V). He differs from them, too, in being of a heavier, more human build, and in not having just that touch of spirituality which is their distinguishing characteristic. That is the point in which the imitations differ from the originals in most centres, when the workman did not content himself with reproducing the type, but attempted to modify it, his work is more human and less graceful.

He did not, however, confine himself entirely to these reproductions, and some of the figures assigned to other centres are extremely interesting, notably those from Eretra, which is especially distinguished for a taste for greater definiteness of subject showing itself in the choice of legendary subjects (Plate VI), and of character studies from real life, the pictorial character of which proves that they belong rather to the second than the first half of the third century. It is present even in their imitations of Tanagra types (compare Fig. 17 with Fig. 20), and finds full scope in such subjects as a school-master teaching a boy to write (Fig. 26), or the Nered bearing the helmet of Achilles (Fig. 32).

Among the figures of undoubted Eretrian provenance is a mask of Pan (Fig 15) found in the "Tomb of Aristotle," which is especially interesting because it embodies those qualities of simplicity and breadth

 $^{^{1}}$ In the Central Museum at Athens. I am indebted to the Ephots, and to the discoverer, Dr Waldstein, for permission to publish it.

of design which are inseparable from good work in clay. The material has its limitations-it is well able to reproduce the main features of a design, to suggest its outlines and the idea it contains, but it is not suited to the reproduction of minute detail. The charm of most of the Greek statuettes arises from the potter's knowledge of these limitations, which led him in making his figures to eliminate all unnecessary detail, and only to render the broad masses and outlines of his model broad treatment the little Pan mask is an admirable example, the potter had to suggest the woodland character of the god and his shaggy goat form, and therefore the pointed ears, the shaggy eyebrows and knotted forehead melt insensibly into the little horns, the horns into a fringe of hair with leaf like locks. The lines of the forchead and the snub nose run down through the long pendent moustachios into the goat beard, and the whole face is set in a frame of shaggy hair, there is no attempt at special treatment of any separate part of the composition, no insisting on details which might distract the eye and therefore the design produces its full effect and suggests the dual character of the god better than another Eretrian statuette, a full-length portrait of him (Plate VI) in which all the details of horns pointed ears and goat legs are carefully worked out The striving after effect seen in most of the Eretrian figures is not peculiar to them, for we find it in a lite Athenian statuette (Fig 22) of a lady poising an apple, and in a Corinthian one (Plate I) It was the means by which the potters tried to keep in touch with the taste of the age, and it is to this desire also, that is due the prominence assigned to the ugher members of the Dionysiae cycle, the Satyrs and Seileni

In a previous age the Seilenos under the type of a nude bearded elderly man with pigs ears, was used as an amulet (page 28) and thus came into contact with the underworld god Dionysos Dionysos had, however, another character as a woodland divinity, in whose train were Pan, the nymphs and the satyrs. The satyr was also a bearded nude male figure, and with him Seilenos was confounded, while the satyr took over the protective character of Seilenos, and guarded the infant god from harm. This legend is referred to in two statuettes, in one (Fig 36) the Seilenos pedagogue is taking his charge to school, and in another (Fig 35), the satyr is shown carrying him on one arm, and

of Aphrodite's train, or as a mischievous boy (Fig. 8), that cruel Eros whose pranks the Hellenistic epigrammatists bewailed so prettily. In this character he is frequently engaged in burning a butterfly (Psyche), but the group can have no reference to the legend of Cupid and Psyche which is of much later origin

The statuettes of Myrina are remarkable for the extent and variety of their types, and among them are every variety of floating and dancing figure posed with wonderful freedom and grace. These floating figures mark a phase of Hellenistic art which began with the little Erotes of Tanagra, and inspired a charming figure of a dancing-gurl (Plate VII), which though found in Greece is more closely connected with Asiatic than with Greek statuettes, both by its technique, its type of face, and its style. A certain number of copies of famous statues are found, chiefly of Aphrodite, but these are less numerous than at Smyrna, where the potters were chiefly occupied in making copies of bronze statuettes, which were frequently gilt to represent metal, just as at the same period the vase maker silvered his embossed cups and bowls.

The figures from every-day life are all drawn from the artisan or actor class, and are remarkable for the vividness with which they are modelled. As a rule these figures are not retouched and the potter relied rather on the general effectiveness of his work than on its technical perfection of detail, though on occasion he could retouch as cleverly as the Tanagra potter. The principal features of his style are its decorative and pictorial character, the figures are rounder and fuller, their features softer, their attitudes more conscious than in the Greek work of the preceding age (Fig. 19), the contrasts between the nude forms and the drapery are more insisted on, and we are confronted with an art of a more assertive and realistic type.

We find the same characteristics in the Sicilian and Italian terra cottas, for there were no such barriers in the Hellenistic world as had formerly divided the cities of Greece, individualism had died out, and had given place to a monotonous uniformity of thought, of feeling and of taste, and the same subjects, mythological and genre, appealed to Italian and to Asiatic ahke The mythological figures are all taken from the Aphrodite cycle, copies of statues of the goddess (Fig. 18), graceful winged feminine (Figs. 4 and 5) and masculine

types, and figures of a boy-Eros (Plate VIII) The genre figures are all caricatures and drawn from the same class of subject, the full type of face, the strong contrast between nude and draped forms, are found in both places

But in spite of the similarity of the subjects chosen there is a certain difference in the way in which they are treated, the winged figures do not flort, they stand, or rather Jean against a pedestal, in an attitude common among Tanagra figures which borrowed it from Praxitelean art. This attitude necessitates a somewhat different arrangement of drapery instead of a short tunic girdled round the waist and floating in the air, the Italian figures are swathed in a heavy mantle, which leaves the upper part of the body bare but fulls in massive folds to the ground and forms a base for the figure, which thus assumes a more statuesque pose. It results from this that while the Asiatic types are the more dramatic and ornate in character, the Italian and Sicilian ones are more simply conceived and so approach more nearly to the traditions of Hellenic art How far both fall short of them, not only in style but in mere technical skill, is shown by a comparison of three statuettes from Athens (Plate VI), from Myrina (Fig 19), and from Canosa (Fig 18), all of which are reproductions of statues

The nude youth crowned with flowers, with wine-cup and jug in his hands, is one of those fifth-century conceptions which hover on the confines of the real and the ideal world, and for which it is difficult to find a name, but whether we call him 'The Cup-Bearer or the "Spirit of the Banquet" (page 66), the name can add little to his charm. The slender figure is so perfectly bilanced, the feet sink so naturally into the little clay plinth, the still undeveloped body is modelled with such attention to anatomical detail, but no undue insistence on it, the watchful attitude of the willing cup bearer is so well expressed, that we seem to have before us one of those proplasmata or sculptor's models of which Pliny speaks as commanding so high a price. The technical skill displayed in firing so fragile a figure is no less remarkable.

With it the Artemis (Fig. 19) from Myrina compares but poorly, for the potter has in proverbial phrase "aimed at perfection and

attained mediocrity," and though the figure is picturesque its general effect is clumsy and wanting in dignity, for he has been more anxious to render all the details of the goddess' equipment and to put her into a striking attitude, than to express her character, and therefore his figure is not the Artemis of whom Homer sang 1—

"Great Artems, whose very heart Is on het arrows set, across some mount Her path pursues, on steep Taygetus Or Ermanthus coursing, where in bears And swiftly fleeing deer is all her poy.—And ever in her train the rural nymphs (Those daughters fair of agus-bearing Jore). Disportive play, and with the scene elate Latona too, shows gladness, while 'bove all By a whole head and brow she towers high Even where all are lovely, instant known.

Translated by G MUSGRAVE

but the Artemis of the Hellenistic epigrammatist "-

Iranslited by J H MERIVALE

The Aphrodité from Canosa (Fig. 18) shows better workmanship, and the potter has cleverly avoided the difficulty of balancing an undraped full-length figure by adopting a crouching position

The nude Aphrodité of Praxiteles, perhaps the most famous statue in antiquity, is the basis of all the statues of the goddess bathing, wringing the water from her hair, etc., and in the third century B.C. a Bithyman sculptor, Dudalos, taking the idea from a picture, represented her as a kneeling bather. The type is known to us by many replicas, of which the most famous is one in the Louvre, the so-called "Venus de Vienne." In time these copies degenerate into mere toilet scenes from every-day life, but our statuette is distin-

¹ Odys. vi. 102

[&]quot; Ως πρεπει 'Αρτεμις ειμ' εὐ δ Αρτεμιν αὐτος ὁ χαλκος μαινει Ζηγος κοιχς ετεροι θυγατρα. Τεκμαιρου το θρασος τως τυρθαίοι. "Η ρα κεν είποις Πάσα χθων ολεγων τάδε κειαγματον — Anthol Pal XVI. (App. Plan.) 158

guished from these by its absence of affectation, and by the noble simplicity of the head and expression. It is these qualities which, though the bodily forms are too heavy and massive for grace, and the limbs somewhat disproportioned, make it no unworthy picture of the goddess.1

> "Thine own fair form's sweet image take Than this no choicer offering can I make," Translated by J. H. MERIVALE.

In these three statuettes we have a résumé of the history of Greek art during the last four hundred years of the Pagan era, of the variations of style and taste through which it passed, and of the phases of thought which dictated them, but a study of the statuettes shows that they have a human interest as well as an artistic one, and as human documents they have much to tell about the manners, customs and beliefs of classical Greece,

CHAPTER V

GENRE STATUETTES OF FEMININE TYPE

"Not such your burden, happy youths, as ours—
Poor women chaldren, nutrured danntily—
For ye hare comrades when all fortune fours,
To hearten you with talk and company,
And ye hive games for solace, and may roam
Along the streets, and see the painters' shows;
While woe betide us if we stir from home—
And there our thoughts are dull enough, God knows!"
Translated by William M. Harding.

Ήξιδίοις οίκ έστι τόσος πόιος όπτόσος ήμιν πάις άταλοψίχοις ξχρας θηλιτέραις Τοίς μεν γύμ παράανιν όμηλικες, οίς τὰ μεμίμνης άλγια μιθείνται φθόγματι θαρσαλίς παίγνιά τ' ἀμφίπουσι παρήγορα καλ κατ' ἀγιὰς πλάζονται γραφίδιον χρόμασι βεμβόμετοι ήμιν δ' οίδι φάις λεύσσειν θέμες, άλλά μελιάθροις κοιντάμθαι, τοδιματίς φοντομ ππάχειστος ποκυπτάμθαι, τοδιματίς φοντομ ππάχειστος κοιντάμθαι, τοδιματίς φοντομ ππάχειστος ποκυπάμθαι, τοδιματίς ποκυπάμθαι, τοδιματίς ποκυπάμθαι, τοδιματίς ποκυπάμθαι, τοδιματίς ποκυπάμθαι, τοδιματίς ποκυπάμθαι, τοδιματίς ποκυπάμθαις ποδιματίς ποκυπάμθαις ποκυπά

AGATHIAS SCHOLASTICUS, Anthol. Pal. v. 297.

To ninety-nine people out of a hundred the interest in any collection of Greek statuettes centres in the dainty little ladies from Tanagra whose acquaintance a delighted world made for the first time about thirty years ago, when they revealed to us a phase of Greek art whose existence we were far from suspecting. Since then their popularity has never decreased, and the reason of it is not far to seek. They are so human in their dainty prettiness that we realize at once that their type of beauty is not the ideal one of the sculptor, but the real one of every-day life. True, the modelling is sometimes sketchy, but the sketchiness is that of a Japanese drawing, not the omission of anything important, but the suppression of the unimportant; for instance, the most interesting part

of the human body is the face, and the heads of these statuettes are treated in a spirit of delicate and refined realism which is only enhanced by the less detailed execution of the other parts of the figure. In this realism lies the secret of their charm, we see the Greek woman of the upper classes, we learn how she dressed, the shape, colour and fashion of her different garments, and how coquettishly and with what infinite variety she arranged a costume which, in itself, is extremely simple, and whose elements never varied, and we also learn how she amused herself. Such details are all the more interesting because classical authors tell us so little about her daily life, and the general impression is that we know nothing of it, because she spent her days in the seclusion of which Agathris' epigram (quoted above) gives us so vivid a picture. But why do niore than half the Triagra ladies were hat and shawl if "they were not allowed to breathe the outer ur, and brooding on their own dull thoughts, must stay within."

The status of women in Greece varied from century to century and from district to district, just as it has done in other lands. Homer and A schylus probably drew their hermines from life, and neither suggests that they lived in Oriental seclusion, on the contrary, both represent them as having a dignified position in the household and conversing fricily with such strangers as came to their husbands in father's hause, but after the Persian wars (8 c. 490), and possibly even before when there was a great influx of Greeks from Asia Minor, I astern ideas as to the propriety of secluding women seem to have crept in, especially in Athens. It is, however, quite clear that even there the restraining power was public opinion, not physical force

It must be borne in mind that our impressions of Greek life and custom are mainly derived from one epoch in the history of one state, the sixty years in the history of Athens which has been apily named her "Imperial period" (8 c. 470-410). Thens was then the centre of the world, her streets were througed with a minley crowd of Greek and foreign sailors and traders, and an Athenian gentleman may have been well justified in thinking that his woman-kind were better at home, except when they were taking part in religious process ons and cere-rionies, where custom pro-ceted them from insult. These functions afforded a fair number of outings, but they gave no opportunity of

meeting the other sex, for a Greek lady was entirely restricted to the society of her own or her husband's immediate male relations, and for a male friend, however intimate, to enter a house when the master of it was absent, would have been considered a wanton insult

It must also be remembered that the remarks of Athenian authors only refer to the women of the noble and wealthy classes, and to dwellers in towns. Prior to the Peloponnesian war, most wealthy Athenian families lived on their estates in Attica, and only came into Athens when their presence was required there. Xenophon, in his treatise, The Householder, mentions amongst the advantages of a country life, "that it is so much more pleasant for the wife," and Demosthenes draws a pretty picture of the excellent relations which had formerly existed between the mothers of two litigants, when they used to meet in the evening, and sit spinning and chatting in the fields, "as they naturally would, being neighbours in the country, and their husbands good friends".

The object of quoting these passages from Athenian authors is to show that by using the terracotta statuettes as the bisis of this account of a Greek lady's life and habits, a truer general view of the subject can be obtained than by emphasizing the peculiar local conditions of life at Athens, which was undoubtedly more restricted, though rather in the direction of separation from the man's life than in entire seclusion at home At the close of the first years of the Peloponnesian war, Pericles delivered a funeral oration at Athens in honour of the slain, in which occurs this passage addressed to their widows -" Your greatest glory is not to fall short of the standard set up for your sex, and she is best, whose name is least spoken of among men, either for praise or for blame"2 This would certainly have missed its effect had the widows not been present to hear it, undoubtedly they were, in a place apart, and that represents the Athenian, and in a lesser degree, the Greek view of what was becoming in a woman, to live modestly and discreetly in the background of a man's material life, a faithful guardian of his house and gear, leaving him free to seek abroad among his own sex the companionship and mental stimulus which she could not give

Judged by the standards of the present day, the life of a Greek woman

¹ Demosthenes contra Kalliclen 21

was dull and monotonous, but we should pass the same verdict on an English country gentlewoman's life a hundred years ago—a round of household cares and duties, broken only by domestic anniversaries and religious ceremonies.

One of the most important duties of the women was the preparation of the clothing of the household, no light matter when every web of cloth had to be carded, spun, and woven at home Theocritus ¹ sang the

"Blithely whirling distaff, azure-eyed Athene's gift
To the sex, the aim and object of whose life is household thrift."

1 ranilated by Calverley

and though one poet hurled an angry epigram at "wool which makes women grow old" a Greek lady was proud of her skill in spinning and weaving, and claimed for herself the lines in which Theocritus sang of Helen,²

"And who into the basket e'er

The yarn so defily drew;
Or through the mazes of the web
So well the shuttle threw,
And severed from the framework
As closely woren a warp,
As Helen, Helen in whose eyes the loves for ever play"
Translated by Calvering.

Spinning, weaving and embroidery were the most important items of a Greek girl's education, which was conducted entirely at home, and therefore restricted to such accomplishments as her mother could teach her, music, singing and probably a little reading and writing; the most important thing, in Xenophon's words, being "that she should be brought up to see and hear as little and ask as few questions as possible." Her marriage, which took place at about fifteen, was a

³ Xenophon, Economicus, vn 5-7

matter of arrangement between the relations on either side, and the shy, frightened demeanour of a young wife is well described by an Athenian husband, who told Socrates that when his young wife was "sufficiently tamed,' he began to ask her questions, and to teach her how to manage the household, because all she knew when she came to him, and it was all he could expect-was how to take wool and make a dress, and how to apportion the daily spinning tasks to the handmaidens, as she had seen it done in her mother's house Xenophon is of course referring to life at Athens in the fourth century BC, and we gain some details as to provincial life from one Dicearchus,1 a Greek dilettante whose notes of a tour through Attica and Bosotia in the third century have come down to us He stayed at Tanagra, where he found much wealth but little display, he praises the uprightness and hospitality of the inhabitants which made it the pleasantest place in Bosotia for a stranger to stay in, though at first it looked a mere heap of lime-washed houses. He passed by Platæa where the inhabitants lived on the memory of "the brave days of old," thence through well-watered plains to Thebes, a charming place for a summer residence, even though it was hot, because the gardens were the loveliest in Greece The Theban men had every vice. but the women! there was nothing Boeotian about them, nay! they were like the women of Sikyon, so gentle and pleasant were their voices "Their height, beauty and graceful carriage makes them the fairest and most elegant women in all Greece" Then he notes some details of their dress "Their method of wearing the shawl over the head is such that only the eyes show, the rest of the face is veiled, this shawl is always white. Their hair is auburn and they wear it twisted up in a knot on the top of the head, the local name of this coiffure is lampadion (the torch) Their shoes are thin, cut low, red in colour, and so neatly fitted to the foot that it looks almost bare"

On the whole of this passage the statuettes form a most interesting commentary, we see the tall, graceful Theban lady with her shawl thrown over her head (Fig 17) and draped closely round her in elegant folds, gracious and pleasint in looks, sometimes with, sometimes without, a hat (Fig 20) to protect her from the scorching

¹ Dicwarchi, Descript o Gracia, 8-22

rays of the sun, often bearing a fan with the same object. Until the discovery of the statuettes we were far from suspecting how important an adjunct a fan was to the toilette of a Greek lada, nor did we know the fashion and shape of the big straw hat (tholia) which Praxino- wore when she and Gorgo went to see the Adoms play at Alexandria (page 50)

In the same way the statuettes show us that the ordinary house dress was a long tunic (Fig. 21), with or without sleeves, girdled under the arms, and reaching to the feet, this garment was usually white, but was often decorated with coloured borders and embroideries. Such a costume was, however, only suited for indoor wear, and on occasions of cerumony a shawl was added, even indoors. Of this we have a charming example in a standing figure with a wreath in her hair, who is draped in a large square shawl of a blue tint (Fig. 31). This shawl was de rigueur when a Greek lady walked abroad, and we see in how many and how varied ways it could be worn (Plate I) According to Dicaarchus, it was always white, but as a rule, those of the statuettes are pink or blue Another difference is in the shoes which are of untanned leather with a red sole, and probably, though we do not see them, high red heels. The Theban 'lampadion conflure frequently occurs (Ibid), and so does a variation of it in which the knot is supported by a shaped band fastened over the forcherd (Plate VIII)

Occasionally, but only occasionally, we find a statuette which seems to possess a definite personality, and to um at representing not any lady, but some particular lady, and such is the digmfied matron (Fig 22) seated on a rock in one of those shady Thebin gardens of which Dicearchus spoke. Her gala costume, no less than her heauti, remind us of the heautiful Becotian poetess Corinna who five times won a prize from Pindar, and who boasted that hy her sweet-toned songs she had brought great honour to Tanagras white robed dames though current gossip ascribed her victory not to her poetry, but to her beauty. In one hand she poises an apple, the lovers token.

¹ Γωρηλω βιλλω σε τι ο ερετικε τα φιλλερε δεξαρετη της στης παρθα γερετικώς ε ο ρωρηγια το, και τι τι αιτιλα βιτα κειαιτικορη ως λημώνους Ειλτι Βετηλιο

"I throw an upple at my fur,
And if she love me, love me truly,
She It guess aright the hidden prayer,
Accept it, and reward me duly
But if—oh' let it not be spoken,
She have no mind to be persuaded,
Still let her take the lover's token
And think how soon it will be fided."

Translited by J. H. Merrare.

Charming and valuable as the statuettes are which deal with the outer aspect of a woman's life, they are still more interesting when they take us into the women's apartments and open for us what otherwise would be a scaled book. We see the little girl dressed in her best, seated on a square stool (Fig. 23), quivering all over with suppressed excitement at the prospect of some outing, perhaps the vearly fair, when tors of all kinds were given to the children. An older maiden strolls in the garden talking to the pet bird coonig on her shoulder (Fig. 21). Birds are not infrequent accessories of the Tanagra figures, whether boys or girls, youths or maidens, and the figure serves to illustrate that fondness for pets to which Greek epigrams so often allude.

Another phase of life, the interchange of visits between neighbours, is amusingly illustrated by the accompanying group of two ladies seated on a sofa (Fig 27), enjoying a good gossip, it is the plastic representation of the opening scene between "Gorgo" and "Praxinoe" of the Adonazuise of Theoritus 1

Praxinot Dear Gorgo' you are quite a stranger, I'd almost given you up Sit

Gorgo I hatdly thought to get here alive, such a crush! all sorts and conditions of men, and what a distance away you do live now!

P. Oi, well that treat of your test the houst I con't call it a bouse at the

P. Oh, well! that tyrant of mme took this hovel, I can't call it a house, at the back of beyond, to keep us apart—it's just like him! Thresome pest!

G My dear don't talk like that about you husband before the child Look! bow he's stanng! Never much, Zopynon, my pet, mama's not talking about dada! Good gracious! he understands! Dear Dada!

P "Deat dada" had some marketing to do the other day, soda and rouge to get, and if you believe me he brought home salt!

and so on, the gossip being only cut short by the necessity of Gorgo's putting on her shawl and hat to go and see the Adonis show in Alexandria.

and habits do not come only from Tanagra, some, and those not the least beautiful, are from other parts of Greece, though all are of the type which we associate with the name. It is noteworthy that when the importers did not merely content themselves with a rough reproduction of the graceful figures, their renderings of them have just the touch of character which the Tungra statuettes lack. A comparison of the two standing figures from Corinth (Plate I) and from Eretria (Fig. 17) with mother (Fig 20) from Tanagra shows the precise nature of this difference Both figures are characterized by less delicacy of workman ship and by greater breadth of treatment than their model, this shows in the firmer pose, the attitude of the head, the arrangement of the drapery, while the Corinthian potter has substituted for the usual thin, rectangular plinth, a high one of columnar form which adds much to the effectiveness of the figure, though it detracts somewhat from its poetry Just the same difference is shown in the group of two ladies talking together (Fig 27) It is from Myrina in Asia Millor, and obviously inspired by Tanagra types, but we are immediately impressed with the reality of the scene, whatever the subject of the conversation, the talkers are engrossed in it, and the group gains immensely in value by the addition of this touch of realism. The Tanagra potter was, however, particularly happy in his rendering of figures or scenes in which gentle grace predominates, and one of his most attractive groups is that of the mother and child which has all the sweet serenity of a mediæval Madonna (Fig 25), but it is not a matter for surprise that with the growing tiste for realism in art, his dainty productions ceased to please and had to give way to a coarser and more human type of figure

CHAPTER VI

GENRE STATUETTES OF MASCULINE TYPE

"The first of mortal 1938 is health,
Next beauty, and the third is wealth,
The fourth, all youth's delights to prove,
With those we love —Tra date! b J H MERITALE

Έγιαινειι μει άριστον α δρ θ ατω δεττεροι δε φιαν καλον γενεσθαί το τριτον δε τλοιτειν αδολως και το τεταρτον ηβα μετα τωι φ'λωι

Bergk op et 1289

The Greek passion for beauty of form led to a cultus of youthful physical beauty and of its fortunate possessors, the beauty of youth the deformity of age, is the frequent theme of the Greek poets, the pittfulness of growing old, of losing the vigour and freshness of youth, the horror and disgree of physical decay, impressed the Greek imagination.¹

"The fru t of youth remains
Brief as the suishing scittered o et the plains,
And when these shining hours have fled away,
To die were better than to breathe the day '—Translate l b, F ELTON

The sentiment was no late importation into Greek literature, it finds voice even in Homer, and the crowning argument used by Tyrtaus to incite the Spirtan youth to provess in war, is the cruelty

μπηθα δε γεγεται ήθης καρτως όσοι τ «-ι γην κόδιαται γιλιος αιτορ ειτη δη τοιτο τελος ταραμειωται ώρης αιτικα τεθιαμειαι βέλτι ι ή β στος Μινικενιίς, Frag 2, Bergl of et 409

* Ilial, xxn *1 #

of allowing an elder man to suffer death in battle, a death which would reveal the deformities of age, but which could only bring fresh glory to the beauty of youth.¹

"Leave no' out sires to stem the unequal fight, Whose limbs are nerved no more by buoyant niight. Nor lagging brekward, let the younger breast Allow the man of age (a sight unblessed), To welter in the combat's foremost thrust, His hoary head dishevelled in the dust And venerable bosom bleeding bare. But youth's fair form, though fall'n, is ever fair, And beautiful in dealt the youth appears, The hero youth who dies in blooming years."

Translated by T. CAMPBELL

This idea is so characteristically Greek, so interwoven with the fibre of Greek life and thought, that it would be strange if the potter had not given expression to it. Every collection of Tanagra figures contains a certain number of male types, and these almost without exception represent youths under twenty; it is only very rarely that we find the portrait of a man of middle age, while old age is usually treated in a spirit of caricature, with special reference to its loss of figure, hair and teeth.

Here again the statuettes afford valuable evidence of contemporary Greek taste and thought, and an interesting commentary on the statements of classical authors about the education and training of the Greek boy.

This was conducted on principles diametrically opposed to those on which his sister was brought up, she entirely at home, he entirely away from it. This absence of family life is the weak point in the Greek social system; a boy was removed from his mother's care

1 τοίς δε παλαιστέρους δεν σίεξει γούκει ελαφρά, μή καταλείποντες φείγετε, τοὺς γεραίοις αιάχρὸν γὰρ θη τοῦτο μετά προμαχοιαι --εσύντα κείσθαι πρόσθε νέωι διόβια παλαιότερου ήδε λεικούν έχοντα κάρη πολαίν τε γόειον θιμόν άποπνείοντ όλκεμον εί κονόη είναι τός δείναι και και το κ

when he was about seven, his father's day was passed almost entirely away from home, and tenderly attached to their children as the Greeks were, this tenderness did not lead them to take an intelligent interest in a child's upbringing, in which the parents had little share, for a father who had engaged an efficient attendant and competent instructors for his son had done all that the most exacting theorist could require

The cause of this curiously detriched attitude lies in the radical difference between the ancient and the modern conception of the objects of education. In our view education is directed to the advantage of the individual who belongs to himself, but the ancients sought the advantage of the State, to whom a man belonged

This theory carried to its logical conclusion would oblige the State to undertake the whole of a boy's education, but save in Sparta it contented itself with providing him with two years military training at the age of eighteen, and left his previous studies to private enterprise

A Greek lad's education therefore fell into two parts the first from seven to eighteen years of age, the second, from eighteen to twenty During this latter period it is easy to follow his life, but not so easy to discover how he spent the preeding eleven years in acquiring the very slender amount of knowledge which constituted a liberal education in a world which had not much past of its own, and had not vet learnt to take an interest in the past of "barbarian" nations

Until he was seven a boy remained in the charge of his mother and nurse, but about that age he passed into the care of an elderly male slave, called a pedagogue, who had no literary duties but whose function it was to attend him to and from school, and to teach him the ordinary rules of good behaviour—"not to sit with his feet crossed, nor to lean his chin on his hand, not to stare about him in the streets, but to keep his eyes fixed modestly on the ground, how to went the big clock which was his outdoor dress (Plate IV), and how to eat tidily, taking one finger to relishes and sauce, two to broad and fish. The conventional representation of a pedagogue is an elderly man, with bild head, long beard and wrinkled forchead (Lig 36).

There were three branches of learning—grammar, music and gymnistics, until he was fourteen a boy was principally concerned with the two first-named, but at fourteen he was supposed to have finished his studies in "grammar," and it was replaced by gymnistics to which and music, he chiefly devoted his attention during the last four years of his school life

"Grammar comprised reading, writing and a little elementary arithmetic After three years instruction the pupil could usually begin to read the poets, his acquaintance with their works was not, how ever, postponed until he could read them for himself. The great poets supplied the religious influence in Greek life, and a Greek child learnt by heart passages from Homer and Hesiod as an English child learns passages from the Bible These were committed to memory from the oral instruction of the teacher, and we now see why education proceeded at so leisurely a pace, there were, of course, no home lessons for there were no school books and though a Greek boy had not continuous holidays, there were a sufficient number of public festivals to seriously interrupt the course of study, for during these the schools were closed, and it is recorded as characteristic of a mean man that he did not send his children to school during the month Anthesterion because half of it was occupied by public festivals, and he thereby saved a whole month's school fees!

Besides selections from the works of Homer and Hesiod, a Greek boy had to learn the many popular songs, hymns, catches, darges and choral odes knowledge of which constituted a liberal education. Few of these have come down to us except in quotation because the greater part of a Greek gentleman's library was housed in his head, and everybody knew them by heart, one of the finest, the "Song of Harmodiota and Aristogetton, 1 which was the Athenian National Anthem ("Ill wreath my sword in a myrtle bough), is well known in translations to English readers

We learn from a terracotta statuette how writing was taught (Fig 26) the teacher traced the letters on the wax covered surface of a wooden tablet and guided the pupil's hand over these lines until he could form them for himself, he also learnt to write in ink with a reed on papyrus, and as papyrus was expensive, these school exercises are usually written on the back of some other document

Numbers in Greek are denoted by the letters of the alphabet, differentiated by accents, $\alpha'=1$, but $\alpha=1000$, and the Greek boy learnt enough arithmetic to transact the ordinary business of life, but abstract quantities had no fascination for the Greek mind, and the followers of Pythagorus who devoted much time to their study were more concerned with the mystical qualities inherent in them than with their uses and capibilities

The Greeks attached more importance to the study of music than to any other branch of education. Reading and writing were comparatively late innovations which old fishioned folk viewed with some disfavour, but choral singing accompanied every public festival.

"Oh, would I were an avery lyre"
A lyre of burnished avery,
That in the Discovering choir
Beauteous boys might carry me"

To melated by J H Merry all

A hymn was sung at every banquet before the symposion began, and catches, glees, and songs during it. Thus Socrates, to put an end to a discussion which was growing heated, says '-" Well! if we are all so eager to be heard at once, what fitter time than now to sing a song in chorus," and started one, perhips this by Hybrias the Cretan '-

"My wealth's a burly spear and brand, And a right good shield of inde sintinged Which on my arm I buckle. With these I plough, I reap, I sow, With these I make the sweet wine flow, And all around me truckle

But your wights that rule no pinde to wield
A massy spear and well-made shield,
Nor joy to draw the sword.
Oh' I bring these heartless, hapless drones
Down in a trice on their microw-bones,
To call me king and lord!"—Fraulated by T. Campari.

Then there were drinking songs 1-

** To be bowed with grief is folly, Nuglit is grined by melancholy, Better than the pain of thinking.
Is to steep the sense in drinking.

Franslated by J. H. Merivale.

and many others, each with its own traditional air, knowledge of which was as necessary as a knowledge of the alphabet, for ignorance showed lack of breeding.

Music included proficiency on some instrument, usually the lyre; at one time the flute was in fashion, but, besides being ungraceful, it was a solo instrument, and, as such, left to professional artists, the gentleman's object being merely to accompany himself when he sang.

The amusements of a Greek boy did not differ materially from those of any other boy. We get a list of his favourite toys from a dedicatory epigram, which show that boy tastes have not changed much in two thousand years,²

1 Οὐ χρὴ κὰκοισι βίμον ἐπετρέπην προκοψομεν γὰρ αἰδὰν ἀσάμενοι, ὅ βικχι, φάρμακον δ'ὅριστον, αἶνον ἐνεικαμένοις μεβέσθην

LEONIDAS, Anthol Pal vi. 309.

was dark, but this was a local fashion, mourning for the last king Kodros of blessed memory, and as a rule it was white or coloured

The Athenian ephebe was drilled for a year at Athens, then armed publicly with lance and buckler at the shrine of Agraulos, where he swore 1 not to abandon his comrade in arms, to fight for hearth and home and his country's gods, to obey all magistrates and to respect the belief of his ancestors, "so help me Aglauros, Enyalios, Ares, Zeus, Thallo Auxō and Hegemone" His second year was spent in the frontier guard of which there were two brinches, infinitry and cavalry, and at its expiration he was free from further service, unless war broke out

In the fifth and fourth centuries B c an ephebe was entirely occupied with physical culture, but in later times he was expected to continue his other studies, and a Greek writer draws the following picture of a wellborn youth's day " -" He rises early from his unluxurious bed, washes away the remains of sleep from his eyelids with pure water, and with his classic cloak fastened on his shoulders by a clasp, he leaves his father's house with downcast eyes, looking at no one whom he meets. He is escorted by a decorous train of servants and pedagogues, who bear after him the honourable material for toil, no avory combs to smooth his locks, no printed pictures of beauteous objects, no mirrors, but in their stead writing-tablets, volumes which enshrine the value of ancient deeds, and, if he is going to his music master, his lyre. When his mind is satisfied with lessons diligently learnt, he trains his body by liberal exercise, in peace he practises the arts of war, casting the javelin, and hurling the dart with steady hand. Then come the sports of the palaestra, and under the sun's herce rays he rolls his body in the dust till the sweat drops from it in the struggle. Next a brief bath and a frugal meal, and then his masters come again, expounding which hero was brave and which prudent, and who was funed for justice, who for temperance Night puts an end to toil, and recruited by needful food, he enjoys the sound and refreshing slumber which is the reward of hard work

The statuettes show us this model youth on his way to the pulsestra (Fig. 28), strigil and oil-flisk in hand. It must not, however, be

¹ STOBFUS, Florileg 41, N 141

² LUCIAN, d or 44, 45

supposed that he had no amusements, of these cock-fighting was one of the most popular, another statuette shows us a somewhat older youth (Fig 29), no longer wearing his working-dress, but draped in a mantle of ceremony, with a woollen fillet wreathed with ivy on his head, on his way to a feast with his pet cock under his arm. In addition to the musements of private life, the young man, as the flower of the state, and therefore most pleasing to the gods, took a prominent part in all festal processions, embassies, etc

A Greek usually married young, but that made little difference in his way of life, for "for a man to remain indoors, instead of devoting himself to outdoor pursuits is a thing discreditable," and in Athenian gentleman in the fourth century B c gave the following account of his day to Socrates 1—

"Why then, my habit is to rise early when I may still expect to find at home this, that, or the other friend whom I may wish to see Then, if anything has to be done in town, I set off to transact the business and take a walk, or if there is none, my groom leads my horse on to the farm. I follow, and so make the country road my walk, which suits me as well or better than pacing up and down the colonnade. After I have looked round the farm I generally mount my horse and take a canter. I put him through his paces, avoiding neither slopes, ditches, nor streams, only taking care not to lame him. That done, the groom leads him home, and I return too, partly walking, partly running, and when I get home I have a bath and a rub down, and then I take my middly meal."

This was rather an exceptional way of life for a townsman, though it must furly represent the ordinary pursuits of a country gentleman, of whom Fig. 30 gives us an excellent portrait, a burly, rough-looking person in military costume, who would come up to Archilochus' idea of what a soldier should be 2.

Translated by J H MERIVALE

Most dwellers in towns spent the morning in the agora, where they did the household shopping, and in the law courts, where a good deal of time was taken up in the performance of civic duties and took their exercise in the colonnades

Afternoon and evening were the hours consecrated to social intercourse, the evening meal was served about sunset, and after it the guests, having offered three libitions, sang a hymn such as the following 1—

"Pray we or not, great love, do thou supply
All good, all harm, e en to our players, deny'

Translate! by Dr H Wellesley

as a prelude to the symposion or drinking-feast, at which they entertained each other with songs, riddles and discussions. On very grand occasions the issistance of professional musicians and dancing-girls was called in. A statuette shows us one of these with balls in her hands (Plate VII), "and with these in her hands she falls to dancing, and the while she dances she flings them into the air, overhead she sends them twirling, judging the time they must be thrown to catch them as they fall in perfect time."

Sometimes a symposion was a mere drinking bout, but though we can hardly believe that it was such a "feast of reason and a flow of soul" as Plato and Xenophon suggest, its attraction lay not only in its opportunity for drinking, it was a means of social intercourse. A Greek found no pleasure complete unless "enjoyed with friends," and his feeling is well expressed in the words of a popular refrain—

¹ Ζεῦ βασιλεί, τα μεν εσθλα και ευχομενος και ανευκτοις άμμι δίδου τα δε λυγρα και ευχομειων απερυκοις Anthol Pal x 108

A DANCING GIAL

"Quaff with me the purple winc,
And in youthful pleasures join,
Crown with me thy flowing hair,
With me love the beauteous fair,
When tweet madness fills my soul,
Rave thou too, without control
When I'm sober, sink with me
Into dull sobriets "—Iranitate! by J. H. Mernale

Turning from the lessons the statuettes teach us to the statuettes themselves, it will be noticed at once how few they are in comparison with their feminine counterparts, about one in fifteen is the usual propor tion. All the specimens, however, ment careful attention, the figure on Plate IV representing a laughing boy, is noticeable not only for its expression, which is unusually animated for a terracotta statuette, but for the extreme care with which all the details of the costume are rendered, mantle, fillet and sandals fastened with cross-way thongs Another (Plate IV) has an interesting peculiarity of technique, the nude portions are not merely dipped in lime-wash and then painted, they are enamelled in colour, and hence the excellent preservation of the surface and the colour The same technique appears in several other statuettes in the British Museum collection representing Leda and the swan, a grotesque old woman, etc. In the first century B c the potters of Centorbi in Sicily reverted to this technique with great success, an Eros (Plate VIII) has the nude portions enamelled in pink, and other statuettes in a lurid purple which is the reverse of pleasing

In order to fully appreciate the excellence of the Tanagri statuettes at their best period we have only to compare Fig 28 and Fig 29, both representing the semi-nude figure of a youth. The graceful, easy pose, the effective contrast of the nude forms and the drapery, the gentle expression of the Tanagra youth, make up an artistic whole in which we see the ideal ephebe of Greek fancy, the other figure, which probably comes from the neighbouring district of Eretria, and belongs to a later period, gives us a faithful and conscientious portrait of the ephebe as he was, seen through a less artistic medium than the Praxitelean ideal

¹ Στι μοι τινε στινηβα, στιτρα, στοτεφανηφερει, στι μοι μαιτομενω μαιτεο, στι σωφρονι σωφροια Pranila, Bergl of at Freg 1293

The same may be said of the stalwart warrior shown in Fig. 30, who bears the same relation to the youthful armed warriors found among Tanagra figures, that the female figures from Corinth and Eretria do to the ordinary Tanagra type he has gained in character what he has lost in grace

If we may judge from the infrequency with which they were reproduced by foreign workshops, the masculine types did not enjoy the same favour as the feminine ones, and this was probably the case, they were consecrated to the glory of the ephebe, and represent a phase of life and thought which was too local, too exclusively Greek to appeal to nations among whom it did not exist

CHAPTER VII

STATUETTES ILLUSTRATIVE OF MYTH AND IEGEND

"To shaggy Pan and all the wood-nymphs fair,
Fast by the rock this grateful offering stands,
A shepherd's gift—to those who gare him there
Rest, when he faunced in the sultry air,
And reached him sweetest water with their hands,"

Translated by J. W. Burgos.

Φριξόκομα τόδε Πανὶ καὶ αἰλιάσιν θέτο Νίμφαις Εδρον ὑτὸ σκοπιᾶς Οείδοτος οἰοιόμος οἴιεχ' ὑτὰ ἀξαλέον θέριος μέγα κεκμηῦτα ταῖσαν, ὀρέξασαι χεροὶ μελιχρὸν ἔδωρ

ANTE, Antlol. Pal. XII. (App. Plan.) 291.

The border-land of Greek mythology is peopled with a throng of beings neither human nor divine, satyrs, nymphs—"those daughters fair of Ægis-bearing Jove,"—and nereids, who filled a very large place in popular fancy, and who, especially to the country folk, were everpresent and very real. The shepherd heard them as he wandered with his flocks among the mountains: !—

"Pan on his oaten pipes awakes the strain,

And fills with dulcer sounds the pastoral plain;
Lured by his notes the nymphs their bowers foreake,
From every mountain, running stream and lake,
From every hill and ancient grove around,
And in the mazy dance trup of et the ground."

Transluted by J. H. MERILLE.

Translated by J. H. MERIVALE.

it was the wood-nymphs whom he thanked for grateful shade at noon-day, and for the fresh springs at which his parched flock slaked

> 1 Αιτός έττά στρεγρε μελίζεται εξεκλέδο Πάν έρρον είδι ξεκτών χελος έτης σολήμων αι δε -έρεξ θαλερούεν χορόν ποσέν ευτήσαυτο Υθρώδες ετιμφαι, ετιμφαι Αμαθρούδες. Ρέλτης, Ετας. 24; Bergk of. cis. 625.

their thirst, it was Pin who sent the hunter home with well filled bag. These spirits were not all beneficent the nymphs waited at the bottom of the reedy pools, and dragged the shepherds down to death, the sailor saw the nereids dancing and singing on the tops of the waves, and prayed that they might not wish him to dwell with them in the halls of their father Nereus, and so these minor divinities were the objects of a more constant and careful worship than the great Olympian gods and goddesses who were the official protectors of states and cities

The townsman into whose life wood-nymphs and nereids entered in a far less degree, peopled his world with attendant spirits, more particularly concerned with the occupations of a human life in its relations to other human lives,—who presided over its every act from birth to death, and had charge of everything connected with it from a lady's wool basket to the cups for a drinking feast. The form under which popular fancy conceived these attendant spirits was very vague and indefinite, until Greek literature crystallized them into shape by providing art with a series of graceful conceptions to which it gave plastic expression. The potters could not neglect so fertile a field and one so admirably suited to the character of their wires, and in every centre of production we find figures which are neither presentments of divinities nor studies from real life, but something between the two, the form of which varies according to local taste

It is to this class that the semi-nude maidens and winged children of Tanagra belong, in Athens the spirits take a severer, more sculptural form, often of fully-draped female figures both winged and wingless at Myrina we find floating youths and maidens changed by the addition of a pair of wings into Eros and Nike, and in Italy, too, the same winged youthful forms occur, usually semi nude and leaning against a pillar

The grave and stately maden with arms uplifted (Fig. 16) is a fine specimen of the type which these figures take under the influence of the delicate and rather severe laws of Attic taste, but we can hardly picture her as presiding over a wool-basket or a mirror—rather she is one of the madens to whom Athene committed the care of the youthful Ericthonios, or a divine attendant bearing water for the purification of those about to sacrifice to the "deathless gods, and is a worthy sister of the beautiful little nude cup bearer (Plate VI),

crowned with ivy, who is one of the gems of the British Museum collection. This figure, owing to its beauty, is known as Ganymede, the cup-bearer of Zeus, but it would be equally well adapted for the genius of a symposion, waiting with jug and cup to minister to the pleasure of the guests.

The maidens and winged children of Tanagra are separated from these two Attic figures by a wide difference of taste. The local preference, as we have already seen, was for delicately idealized realism, and so we find that the supernatural character of these attendant spirits is indicated not by giving them wings, but by partially undraping them and seating them out of doors to show that they were not to be taken for mere mortal maidens (Plate VIII), but for the genii who presided at their toilet, their games and their pleasures on the step of the protein which were distributed very much according to the caprice of the potter

The winged figures of Tangra are the little loves afterwards so dear to Hellenstic art, distinguished only from mortal children by their winglets (Plate V) These loves are not the great god Eros of early Greek mythology, nor even the naughty boy-love of the earlier poets (Fig. 8).1

"Innumerable curling stresses grace
His impodent and rakish face,
His hands are tiny, but their power
Extends to Pluto's gloomy bower
The peerish urchin carries wings
With which from heart to healt he springs,
As lattle birds, from spray to spray
Fly carclessly, in wauton play "—Translated by Rev W. Shepherd

Not content with one love, later lyrists brought into being a whole troop of loves to sport and play with human hearts 2-

Think, loves, if misched should beset me,
Would it not greeve you then?
No! by my faith! you d straight forget me,
And to your dree again? "—Treal the! b! C Menivele

The Tranger sprites assume the form of these latest creations of Greek literature, they flit and float about and personify the pleasure they dispense to mortals. Sometimes they are crowned and wreathed, they play on divers instruments, they muffle themselves up coquettishly in their clocks in imitation of human beings, sometimes they bear nurrors, caskets, fans (Plate V) or perfumes, but whatever the occupation of the moment, whether to serve beauty, or to promote the mirth of a banquet, they dance gaily along, adding to the joy of life by the zest with which they perform their duties

If we turn to the woodland spirits ruled over by

"Pan, the cloven-footed detty, Dread king of sylvan Arcady,

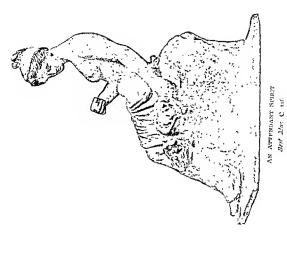

not the least picturesque among them are the satyrs, the wild men of the woods, rough and unkempt, with forms cast in human mould, but covered with shaggy hair, and with a little feathery tril and pigs cars to mark their beast nature

The satyr of Greek literature is a creature "flown with insolence and wine," skilled in the dance, revelling and rioting over the country in the train of Dionysos, but there is an earlier tradition of a gentler satyr-race whose haunts were where ¹

"Through orchard plots with fragrance crowned,
The clear cold fountain murmaring flows,
And forest leaves with rustling sound,
Insite to soft repose"—Translated by J H MERIVALE

To one of these Greek legend gave a name, Marsyas, and told his story thus —Marsyas (Fig 34), like Pan, was a skilled performer on the reed pipes, and in an evil hour he drew near to listen to the dulect strains which Athene was drawing from a double flute, her own

> 1 'Αμφι δε (ΐδωρ) ψυχρου κελαδει δι ὕσδων μαλινων α θισσομενων δε φιλλων κωμα καταρρεί — Sartho, Freg. 4, Bergl op cit 881

STATUETTES ILLUSTRATIVE OF MITH AND LEGEND 69

invention, to imitate the dying shricks of the gorgon Medusa; but when she saw herself mirrored in a forest pool ¹

"Athena flung away,
From her pure hand, the novous instruments
It late had toached, and thus did say,
'Hence, ye bunes of beauty, hence!
What? Shaff I my charms disgrace,
By mixing such an odious face?''—Iranshital by J. H. MERINALE,

Marsyas laughed, but he picked up the discarded flutes, and entranced with their music and certain of success, challenged Apollo to a contest in which the victor was to work his will on the vanquished. The upshot of the trial Alcaeus tells • 2—

"No more, and Phrygan pines, the trills
Of the avect-sounding flute Athena flung away
Will echo as of yore among the listening hills.
Hushed now, poor Saiyr, is the pleasant lay,
Fast bound thy heads, for that thy mortal breath
And goatherd pipes, ferred not to use
With Phorbus' golden lyre, and thou of death,
Hast gained the crown, not victors."

Marsyas was flayed alive by Apollo's orders, but our statuette does not deal with the last scene in the tragedy, we only see him in festal trim, playing on his pipes, a wreath of ivy-leaves in his hair, a cloak floating over his shoulders, hair and beard well brushed, as if to heighten the contrast between the crouching figure and the glorious beauty of his invisible antagonist. The artist has not shrunk from emphasizing all the details of his beast nature, shaggy pelt, pointed ears and feathery tail. The legend, as typifying the triumph

of Greek over barbarian, was a favourite one with the artists of the fifth and fourth centuries, who feeling the impolicy of laying so much stress on Marsyas' beast nature, made him human, save for his ears—and the wits of Athens made merry over the Satyr of Praxiteles who had lost his tail!

Another woodland musician (Plate VI.) challenged Apollo 1-

" Pan, the bright-haired god of Pastoral,

Goat-footed, two-horned, amotous of noise,
Who jet is lean and loreless and doth owe,
By lot, all lofuest mountains crowned with snow,
All tops of hills and cliffy highnesses,
All sylvan thickets, and the fortresses
Of thormest queaches here and there doth rote."

Translated by T. Charman

the gay insouciant being, leader of sylvan murth and revelry, whose appearance so charmed the gods in festal assembly in Olympos, that

appearance so charmed the gods in testal assembly in Olympos, that "they call the name of him Pan because he delighted them all," and to whom mortals sang.²

"Io Pan' we sing to thee,
King of famous Aready!
Mighty dancer! follower free
Of the nymphs, mid sport and glee!
Io Pan, sing merrily,
To our merry ministrely,"—Translated by J. H. MERINALE.
To our merry ministrely,

To charm the mountain nymphs, Pan fashioned the reed pipes, and challenged Apollo to prove his lyre the better instrument Worsted in the contest he withdrew to his woodland fastnesses, content

"To shaggy Pan, and all the wood-nymi hs fair '

He was himself a mighty hunter, the character in which our statuette represents him with scrip and stuff (Plate VI), and he was moreover the patron of all simple light-hearted folk, and more than any other divinity typifies that delight in living which is the keynote of the Greek attitude towards life and death. To the Greek "life" was earthly life, this world was beautiful, and the best he had to hope for in the nether world was a poor, faint copy of its joys, it is this love of life, this joy in the mere fact of being alive, not dead, which separates the ancient world so sharply from the modern,—to the Greek, life was not a vale of tears, it was a garden full of flowers with

"Gatler ye roses while ye may, Old time will still be flying,

for a motto, and it is this joyous spirit, of which Pan was the outward expression, which is such a joy and refreshment to our world in its intervals of sighing "vanity of vanities, all is vanity and vexation of spirit

The popularity in legend and in art of the sea-nymphs, the nereids, is in striking contrast to the silence of Greek literature about them, there they hardly appear at all, and then only in the truin of their sister. Thetis, but doubtless their importance in legend is largely due to their connection with the story of Achilles and the events of his brief life.

When Homer tells the tragic tale of how Achilles lost his dearest friend Patroklos 1—

"Whom I honored most

Of all my courades, loved him as my soul

Him have I lost and Hector from his corpse

Hath stripped those arms, those weights, beat cous arms,

A marvel to behold, which from the gods

Peleus received, a glorous gift. —I one Diray's Irandition

1 ε-τε φέλος ώλεθ ετα ρος Πατροκλος τοι την -τρε -τιτων τ ον εταιρών Του εμφ κεφελη τοι α-ταλεσα τοιχει δ "Εκτωρ δρώτας α-το στ τέλωμα διάμα ιδευθαι καλα --[[]], κικι Νο--Ν4 how at the prayer of his goddess-mother, silver-footed Thetis, Hephaistos fashioned for him 1—

"A sheld vast and strong,

A breastplate, dazzling bright as flame of fire,

And next, a weighty helmet for his head,

Fai richly wrought, with crest of gold above,

Then last, well-fitting greaves of plant tim."—Lord Derry's Iranilation

he passes over the delivery of the armour in a few words,2

"She, like a falcon, darted swiftly down, Charged with the glittering arms Hephaistos wrought."—Ilad.

but for some reason, possibly this very reticence, the scene took hold of popular fancy, which decorated and adorned it with the graceful figures of Thetis' sister-nereids, the sea-maids throng,³

"Whose dance enrings
The eternal river springs,
When dances heaven star glancing
Adoringly,

And the white moon is daileing."-Translated by W. WAY.

and instead of the solitary figure of Thetis we see 4

"The sea maids flitting by shores Euboran, From the depths where the golden annis are Of the fire god, a hero's harness bearing."—Ibid.

The story gains in grace what it loses in pathos, for our attention is distracted from the doomed figure of Achilles, to the graceful sisters

who bear their heavy burdens so lightly over the sea. It is this version of the legend which our structic illustrates (Fig. 32), and borrowing jet another touch from popular fancy, adds a dolphin steed, the good-humoured clumsy beast, who plays so important a part in all sea legends, and forms a piquant contrast to the graceful maiden who sits securely upon his back, giving all her circ to the helmet

" Fair richly wrought, with crest of gold above"

The composition is worthy of note for two reasons, it illustrates a definite legend, and it is evidently a close copy of some famous sculptural group. Statuettes inspired his some famous statue are not rare, but in that case the potter usually simplifies the design, and gives only its main features, here he has given the details of the original, the round face, small head with its close curls, the attitude of the Nereid, sitting tight on her dolphin, the wind blown drapery strained tightly across her knees by the pace at which the dolphin dashes along, even the elaborate helmet, difficult though its reproduction was in clay. The same design appears on the lid of a little gold hox (1 ig 33) of fifth century (405 B c) Attic workmanship, and considering the great interest taken at Athens in all matters pertuning to the sea, it is not strange if the potter attempted a cheap reproduction of a popular group. His copy is not highly finished, the hair is only roughly indicated at the back of the head, the graving tool has slipped at the corner of the mouth, giving the face rather a sulky expression, one hand is a flat, shapeless mass, the fingers of the other are not separated and contrast curiously with the care bestoned on the helmet, but the latter is the keynote of the composition, a Nereid on a dolphin night be 1

but a Nereid with a helmet in her hands could only be journeying to Achilles tent. The beautiful design, the clumsy hands, and the clubor-

Topein to the Get Rot and the adject adject town that the transfer and the transfer and the FI 1 43 - [

ate helmet are all typical of a Greek potter's work, for it was grace and novelty of design, not finish of detail, which was expected of it

The humorous side of Greek life is the only one about which the statuettes tell us nothing, because the intense objection which the Greeks had to absolute realism in art, led them to exclude a class of subject, the comic, in which we should have thought that they, with their keen sense of humour, would delight, but comic events happen only in real life and generally lose their point wher transferred to that ideal world which, in the eyes of the Greeks, was the only sphere of art, art could however represent a scene from real life in a spirit of jest, if that scene could be transferred from the real to the ideal world

The accompanying statuette (Fig. 36) is an excellent example of this, at first sight it represents an every day scene, a pedagogue with his young charge, but a closer inspection shows that the pedagogue has a socratic satyr face and pig's ears, that he holds a wine jar on his head, and the child a bunch of grapes in his hand, and that the group therefore represents an elderly Seilenos taking the little god Dionysos to school, and thoughtfully bearing a jar of wine for their mutual refreshment there. The humour of the situation lies in the idea of a Seilenos, a maudlin old good-for-nothing, assuming the functions of a governor, and of the god Dionysos walking sedately to school through the streets like a good little boy

The Hellemstic cities of Asia Minor and Italy did not share this objection to realism in art, and we find countless "comic' figures, cariestures of the physical defects of the weiker parts of the population, the old, the crippled, the slaves, the actors. There are of course some character-studies from real life among the Greek statuettes (Fig. 2+), but they are meant not to give a funny portrait, but a true one, whereas the Hellemstic figures are deliberate caricatures for the purpose of raising a laugh. The Hellemstic sense of humour was a more brutal thing, amused by physical peculiarities, whereas the Greek required the skilful commingling of incongruous ideas, as for instance the conjunction of a Seilenos and a pedagogue in one and the same person.

For this reason parodies, in our sense of the word, the degrading of the ideal into the real, are almost unknown in Greek art, for the only permissible parody was one which remained in the world of funcy An amusing instance of such is the accompanying travesty of the Hermes of Praxiteles, where instead of the graceful figure in the prime of manly beauty, we see an ugly old satyr (Fig 35), whose ugliness is only intensified by his wreath. To parody the group by turning Hermes into a slave, and Dionysos into a squalling baby would not have been permissible.

It is this apt association of incongruous ideas to which the ancient world applied the term "Attic salt", the salt is apt to lose its savour in translation, but there is one little folk song, on the theme of "the pot called the kettle black," which may bear the test 1

"With his claw the snake surprising
Thus the crab kept moralizing.—
Out on all such turns and graces,
Straight's the word for honest paces"
Travaluted by D K Sandyond

The bulk of the statuettes reproduced in the present publication are

in the British Museum, and my thanks are due both to the Trustees, and to Mr A S Murray, Keeper of the Department of Greek and Roman Antiquities, for permission to use them for this purpose To Mr Murray I have also to express my warmest thanks for his kindness, nor only on this but on many other occasions, and for the unfailing interest, patience, and courtesy with which he has always helped me in my work
